On Sept. 6, 1893, he secretly seized the Brazilian war-ships in the harbor of Rio de Janeiro, and at the head of this force declared against President Peixoto. Some of the harbor forts yielded to him; an intermittent bombardment of the loyal forts, of Nictheroy, and, to some extent, of Rio de Janeiro, was kept up for 6 months, and there were several sharp land engagements. Foreign powers refused to recognize the rebels as belligerents, and they were hence unable to establish a blockade. During much of this time Mello operated on the southern coasts, leaving the command of the ships at Rio to Saldanha da Gama. Santa Catharina was taken late in Sept., 1893, and a provisional government established there, and communications were opened with the insurgents in Rio Grande do Sul. During Mello's absence a government fleet, which had been hastily ordered from Europe and the United States, arrived before Rio de Janeiro, and Saldanha da Gama gave up the ships there (March 12, 1894), taking refuge on a Portuguese man-of-war. Mello still retained several of the strongest vessels, including the Republica and the Aquidaban, as well as portions of the southern states. He attacked Rio Grande do Sul early in April, 1894, but was repulsed, and on April 16 gave himself up to the Argentine authorities at Buenos Ayres. Mendelssohn (men'dels-sōn), **Moses.** Born in Dessau, Germany, Sept. 6, 1729: died Jan. 4, 1786. A noted Jewish philosopher. Premature and severe intellectual labor weakened his health and injured the growth of his spine. In 1743 he went to Berlin, where he at first lived in great poverty, devoting himself to the acquisition of knowledge, until he obtained a position, first as tutor and then as accountant, with a rich silk manufacturer, and at last became a partner in the house. He became acquainted with and was befriended by Lessing, Nicolai, Herder, Wieland, Jacobi, Lavater, and others. Lessing, in his great drama "Nathan the Wise," has erected a lasting memorial to his Jewish friend. Mendelssohn soon became known as a writer upon esthetic subjects. His writings were distinguished by beauty and elegance of style, as much as by largeness of intellect and wisdom. He obtained from the Berlin Academy the prize for an essay "On Evidence in the Metaphysical Sciences," among his competitors being Immanuel Kant. His best-known works are "Jerusalem," a sort of comprehensive survey of Judaism in its religious and national aspects, published in 1783; and especially his "Phædo," published in 1767, a summary of all that religion, reason, and experience urge in support of the belief in the immortality of the soul. For the Jews his translation of the Pentateuch and the Psalms into pure German was epoch-making, inasmuch as it opened the way for them to German literature and culture. He also wrote commentaries on several books of the Old Testament. The Berlin Academy of Sciences elected him a member, but King Frederick II. refused to ratify the election of a Jew. In 1786 Mendelssohn died, mourned by all as "the German Socrates."

Mendelssohn-Bartholdy (men'dels-sōn-bär-tōl'dē), **Jakob Ludwig Felix.** Born at Hamburg, Feb. 3, 1809: died at Leipsic, Nov. 4, 1847. A celebrated German composer and musician, grandson of Moses Mendelssohn. He and his sister Fanny (Madame Hensel) were first taught music by their mother; but in 1816, when they were 7 and 11 years old respectively, they were taken to Paris and placed under the instruction of Madame Bigot. On the return of Felix to Berlin, he studied with Berger, Zelter, and Henning, and afterward with Rietz. He made his first appearance in public Oct. 24, 1818, and was much applauded in the pianoforte part of a trio for pianoforte and two horns by Woelfl. He began to compose regularly in his twelfth year, and the symphonies, quartets, concertos, etc., which he produced after this time were performed at the musical parties which took place at his father's house on alternate Sunday mornings, his brother and two sisters assisting—he, however, always conducting and generally playing the pianoforte parts. Many great artists visited the house on these occasions. He visited Paris in 1825, and in 1829 triumphantly conducted Bach's "Passion Music" at Berlin, after much opposition, for the first time after the death of the composer. The same year he went to England, where he was enthusiastically received; and he traveled there and on the Continent till July, 1832. In 1833 he was made musical director at Düsseldorf; in 1834 member of the Berlin Academy of Fine Arts; and in 1835 conductor of the Gewandhaus concerts at Leipsic, where he became the idol of the town. He became engaged to Cécile Charlotte Sophie Jeanrenaud in 1836; was married in 1837; went to Berlin in 1841 to assist in founding an academy of arts; and paid his ninth visit to England in 1846, for the purpose of producing "Elijah" (went again in 1847). On his return he heard of the death of his sister Fanny. This, with the severe work which was beginning to tell on him, produced illness and depression from which he did not recover. He left between one and two hundred works, among which are the opera "The Wedding of Camacho" (1825), songs,

chamber and orchestral music, the oratorios "Elijah" (1846) and "St. Paul" (1836), overture (1826) and music (1843) of "Midsummer Night's Dream," "Märchen von der schönen Melusine" ("Story of the Beautiful Melusine," 1833), "Die Hebriden" ("The Hebrides"), "Lieder ohne Worte" ("Songs without Words"), music to Goethe's "Walpurgisnacht," "Antigone" (1841), "Œdipus Coloneus," and "Athalie," sonatas, and fragments of the opera "Die Lorelei," of the oratorio "Christus," etc. His letters from 1830 to 1832 were published in 1861; from 1833 to 1847, in 1863. Other letters are in his biographies by Hiller, Devrient, Benedict, Schubring, etc., and in Hensel's "Die Familie Mendelssohn."

"He is frequently referred to as '*the* Devil,' but it was well understood that he was only *a* devil. Goethe took only the name and a few circumstances connected with the first appearance of Mephistopheles from the legend: the character, from first to last, is his own creation; and, in his own words, 'on account of the irony and knowledge of the world it displays, is not easily comprehended.' Although he sometimes slyly used it (though less frequently than Faust) as a mask through which to speak with his own voice, he evidently drew the germ of some characteristics from his early associate, Merck. . . . The original form of this name was Mephostophiles. There has been much discussion in regard to its meaning, but Düntzen's conjecture is probably correct,—that it was imperfectly formed by some one who knew little Greek, and was intended to signify 'not loving the light.'" *B. Merchant of Venice, The. A comedy by Shakspere, entered on the "Stationers' Register" in 1598, published in quarto in 1600, 1637, 1652. See *Jew of Malta,* and *Barlaam and Josaphat.*

There can be no doubt that the play was new in 1598. The two stories interwoven by it are mediæval myths; the germ of each is in Latin in the collection of the "Gesta Romanorum," and the story of the Jew was developed in the direction of Shakespeare's play as the "Adventures of Giannetto" in a collection of Italian tales called the "Pecorone," produced in 1378 by one of the imitators of Boccaccio's "Decameron," Ser Giovanni Fiorentino. This is an Italian collection of which there is no known translation into English that could have been seen by Shakespeare. In 1579, in his pamphlet against the stage as "The School of Abuse," Stephen Gosson referred to a play known as "The Jew," which set forth "the greediness of worldly choosers, and the bloody minds of usurers." So it may be that a previous play, now lost, had interwoven the tales of the caskets and the pound of flesh, and that the transmuting power of Shakespeare's genius was exercised upon this.
Morley, English Writers, X. 238.

[Poor versions and adaptations of "The Merchant of Venice" were made by Dryden, Otway, Shadwell, Lansdowne, and others, which held the stage until 1741, when Macklin restored Shakspere. See *Shylock.*]

Merchant's Tale, The. One of Chaucer's "Canterbury Tales." It is the story of the deception of an old husband by a young wife with the friendly assistance of an enchanted tree. The original is Eastern: an account of the Indo-Persian, Turkish, Arabian, Singhalese, and other versions of it is given in the Chaucer Society's "Originals and Analogues." The Latin versions are Boccaccio's and Caxton's; the immediate source of Chaucer's version, however, is thought to be the Latin fable of Adolphe (about 1315). Pope modernized it as "January and May."

Mercury (mėr′kū-ri). [L. *Mercurius*, Mercury (the deity and the planet): so called (apparently) as the god of trade, from *merx*, merchandise.] **1.** In Roman mythology, the name of a Roman divinity who became identified with the Greek Hermes. As a god of darkness, Mercury is the tutelary deity of thieves and tricksters; he became also the protector of herdsmen, the god of science, commerce, and the arts and graces of life, and the patron of travelers and athletes. It was he who guided the shades of the dead to their final abiding-place. Its proximity to the sun prevents its being often seen with the naked eye. According to Schiaparelli it rotates on its axis in the same way as the moon does, once in each orbital revolution.

In other sections, on "Bookes," "Reading of Bookes," "Philosophie," "Poets and Poetrie," he makes casual references to contemporary English authors, and in his section on "Painting" and "Music" he supplies a few comments on contemporary English painters and musicians. He thus commemorates in all 125 Englishmen; and his list of Shakespeare's works, with his commendation of the great dramatist's "fine filed phrase," and his account of Marlowe's death are *loci classici* in English literary history. The large plates illustrating these books are among the best of early zoölogical drawings, and the accompanying observations are generally very accurate.

Merovingians (mer-ō-vin'ji-anz). A dynasty of Frankish kings, whose eponymic ancestor, Merwig or Merovæus, lived in the 5th century. It rose to power under Clovis, king of the Salian Franks, who defeated the Roman governor Syagrius in 486, accepted the Roman faith in 496, and died in 511, after having made himself sole ruler of all the Franks. His kingdom was divided among his four sons, one of whom, Clotaire I., reunited the several parts in 558. A second division of the Frankish kingdom took place among the Merovingians on his death in 561. This was also a quadruple division. In 567 the parts were reduced to three in number, whence arose the kingdoms of Austrasia (capital Metz), Neustria (capital Soissons), and Burgundy (capital Orléans), of which the first contained a German, the last two a Romance population. Burgundy was eventually united with Neustria, leaving two principal divisions, Neustria and Austrasia. Violent family feuds, as, for instance, that between Brunehilde of Austrasia and Fredegunde of Neustria in the 6th century, caused the power of the Merovingians to wane, both in Neustria and in Austrasia, before that of the mayors of the palace, until in 687 Pepin of Heristal, mayor of the palace in Austrasia, made himself practically ruler of both kingdoms. His grandson, Pepin the Short, finally deposed the Merovingians and caused himself to be crowned king of the Franks in 751.

Merowig (mer'ō-wig), or **Merwig** (mėr'wig). [L. *Merovæus.*] An alleged chief or king of a part of the Salian Franks, and grandfather of Clovis. Some suppose Merowig or Merovæus to have been the patronymic of the family or clan of Clovis, derived from a more remote ancestor.

Merrimac, or **Merrimack** (mer'i-mak). A river in New Hampshire and northeastern Massachusetts. It is formed by the junction of the Pemigewasset and Winnepiseogee at Franklin, New Hampshire, and flows into the Atlantic 4 miles east of Newburyport. It furnishes water-power to Manchester, Nashua, Lowell, Lawrence, etc. Length, about 120 miles (including the Pemigewasset, about 90 miles).

Merrimac. 1. A 40-gun screw frigate built for the United States government in 1855. On April 19, 1861, the Norfolk navy-yard was abandoned by the Federal government, and the ships there, including the Merrimac, were sunk. The hull was raised by the Confederates and cut down to the berth-deck. On the midship section a casemate of timber 170 feet long was built, protected by a double iron plating 4 inches thick. The prow was of cast-iron. She was named the Virginia, and was commanded by Commodore Franklin Buchanan. On March 8, 1862, she destroyed the Congress (a sailing ship of 50 guns) and the Cumberland (a sailing ship of 30 guns) at Newport News. On March 9 she attacked the Minnesota, and was met by the Monitor, which had arrived the night before. The battle lasted from 8 A. M. until noon, and resulted in favor of the Monitor. See *Monitor.*

(See *Anna Matilda.*) The best and worst poems were collected in the "British Album" in 1789. Gifford's "Baviad," a satire on it, sold a fourth edition of this in 1791.

Merry Devil of Edmonton, The. A comedy acted by the King's Men at the Globe before Oct. 22, 1607. Fleay believes from internal evidence that this play was originally called "Sir John Oldcastle," and was written by Drayton for the Chamberlain's Men before Dec., 1597. A prose tract, "The Life and Death of the Merry Devil of Edmonton, etc.," was entered on the "Stationers' Register" in 1608 by "T. B." (Thomas Brewer). The popularity of the comedy probably suggested this tract, which does not cover quite the same ground. The latter has, however, been ascribed to Tony (Antony) Brewer on the strength of the initials in the above entry, the tract having been confounded with the play. (*Bullen.*) The play has also been ascribed without reason to Shakspere, on the authority of Kirkman the bookseller.

Merry Wives of Windsor, The. A comedy by Shakspere, produced about 1600. It was first printed as we know it in the first folio, 1623. In 1602 an imperfect and probably unauthorized version in quarto was printed (reprinted in 1619). It seems to have been based on a mangled repetition stolen from the theater, or else was hurriedly written by command. Rowe in 1709 says, probably without foundation, that Queen Elizabeth was so pleased with the Falstaff of "Henry IV." that she commanded Shakspere to show how he conducted himself when in love. For the plot he was probably but little indebted to other writers. "The Two Lovers of Pisa" from Straparola, in Tarleton's "News Out of Purgatory" (1590), and a story from "Il Pecorone" of Ser Giovanni Fiorentino which suggests the hiding of Falstaff in the soiled linen, may possibly have suggested some of the incidents. John Dennis wrote a play, "The Comical Gallant, or the Amours of Sir John Falstaff," in 1702, in which "The Merry Wives" may be recognized; and an opera, "Die lustigen Weiber von Windsor," by Otto Nicolai, words from Shakspere by Mosenthal, was produced at Berlin in 1849, at London in 1864, and at Paris, as "Les joyeuses commères de Windsor," in 1866.

Merton (mėr'ton), **Walter de.** Died Oct. 27, 1277. Bishop of Rochester, and founder of Merton College, Oxford. He was educated at Oxford; in 1261 was appointed chancellor; and was elected bishop of Rochester in 1274. He originated the collegiate system of the English universities by the establishment in 1264 of

Merton College, the "final statutes" of which date from Aug., 1274. The chapel of the college is marked by its large square pinnacled Perpendicular tower: its choir was built by the founder, and the remainder is of the early 15th century. The library, as well as the college, has the distinction of being the oldest in England. The picturesque inner quadrangle is Jacobean. The Meadow front of the buildings, with their long range of gables, is characteristic.

This system (which has been beneficial in its effects down to our own time, for many of our most distinguished scholars entered the university as sizars) was part of the deliberate purpose that animated the design of Walter de Merton, who may be called the founder of the whole collegiate system. He sought to attract the most capable men of all classes, and so to raise up secular schools which should check the influence of the monasteries, and through them of the pope. *Clark*, Cambridge, p. 36.

It was conquered by Alexander, and belonged successively to the Parthians, Saracens, and Seljuks. It was ravaged by the Mongols in 1221. Later it belonged in turn to Uzbegs, Persians, and Bokharans. The Russians overran and annexed it in 1883–84. It is now traversed by the Transcaspian Railway. Population, about 250,000. The locality now called Merv is merely a large village.

habo. The Great Hare, in Algonquian le- nds.

hat Ioskeha was to the Iroquois, Michabo or Mani- no was to the Algonkin tribes. There has been a good l of mystification about Michabo, or Manibozho, or sou, who was probably from the first a hare sans phrase, who has been converted by philological processes into rsonification of light or dawn. It has already been seen the wild North Pacific peoples recognise in their hero demiurge animals of various species: dogs, ravens, skrats, and coyotes have been found in this lofty esti- ion, and the Utes believe in "Cin-au-av, the ancient olves." It would require some labour to derive all the ient heroes and gods from misconceptions about the nes of vast natural phenomena like light and dawn, and probable that Michabo or Manibozho, the Great Hare he Algonkins, is only a successful apotheosised totem the rest. His legend and his dominion are very widely ead. Dr. Brinton himself (p. 153) allows that the great e is a totem. Perhaps our earliest authority about the thical great hare in America is William Strachey's "Tra- e" into Virginia. *Lang*, Myth, etc., II. 54.

hael (mī′kel or mī′kā-el). [Heb., 'who is like d?' F. *Michel*, It. *Michele*, Sp. Pg. *Miguel*, G. *chael.*] An archangel mentioned in the Bible. is regarded as the leader of the whole host of angels, owing to miraculous appearances recorded in Roman holic legends, is considered by that church to be the resentative of the church triumphant. His feast occurs Sept. 29 in that church and in the Anglican Church . He is spoken of five times in the Bible, always as ting: John mentions him as fighting at the head of angels against the dragon and his host.

robably, on the hint thus given by St. John, the Rom- church taught at an early period that Michael was em- yed, in command of the loyal angels of God, to over- ow and consign to the pit of perdition Lucifer and his ellious associates — a legend which was at length em- med in the sublimest poetry by Milton. Sometimes chael is represented as the sole archangel, sometimes as y the head of a fraternity of archangels, which includes ewise Gabriel, Raphael, and some others. He is usually resented in coat-armour, with a glory round his head, dart in his hand, trampling on the fallen Lucifer. He s even been furnished, like the human warriors of the dle ages, with a heraldic ensign — namely, a banner ging from a cross. We obtain a curious idea of the rous notions of those ages when we learn that the velvet-covered buckler worn by Michael in his war th Lucifer used to be shewn in a church in Normandy wn to 1607, when the bishop of Avranches at length for- de its being any longer exhibited.

Michelangelo (mī-kel-an′je-lō; It. pron. mē-kel-än′je-lō) (**Michelagnolo Buonarroti**). Born at Caprese, March 6, 1475: died at Rome, Feb. 18, 1564. A famous Italian sculptor, painter, architect, and poet. He came of an ancient but poor Florentine family. He was apprenticed to the painter Ghirlandajo April 1, 1488, and with other boys from the atelier began soon after to study the antique marbles collected by Lorenzo de' Medici in the garden of San Marco. Lorenzo discovered him there, and in 1489 took him into his palace, where he had every opportunity for improvement and study. The Centaur relief in the Casa Buonarroti was made at this time, at the suggestion of Angelo Poliziano. In 1491 he came under the influence of Savonarola, whom he always held in great reverence. In 1492 Lorenzo died, and Michelangelo's intimate relations with the Medici family terminated. In 1493 he made a large wooden crucifix for the prior of S. Spirito, and with the assistance of the prior began the profound study of anatomy in which he delighted. Before the expulsion of the Medici he fled to Bologna, where he was soon engaged upon the Arca di San Domenico begun by Niccolo Pisano in 1265, to which he added the well-known kneeling angel of Bologna. He was probably much influenced by the reliefs of Della Quercia about the door of San Petronio: two of these he afterward imitated in the Sistine Chapel. In 1495 he returned to Florence, when he is supposed to have made the San Giovannino in the Berlin Museum. From 1496 to 1501 he lived in Rome. To this period are attributed the Bacchus of the Bargello and the Cupid of the South Kensington Museum. The most important work of this time is the Pietà di San Pietro (1498). In 1501 he returned to Florence, and Sept. 13 began the great David of the Signoria, made from a block of marble abandoned by Agostino di Duccio, which was placed in position May 18, 1504. The two roundels of the Madonna and Child in Burlington House and the Bargello were probably made then, and also the picture of the Holy Family in the Uffizi. In 1503 Piero Soderini, gonfaloniere, projected two frescos for the Sala Grande of the Palazzo Vecchio. The commission for one was given to Leonardo da Vinci, that for the other to Michelangelo in 1504. For it he prepared the great cartoon of the Battle of Cascina, an incident in the war with Pisa when, July 28, 1364, a band of 400 Florentines were attacked while bathing by Sir John Hawkwood's English troopers. This cartoon contained 288 square feet of surface, and was crowded with nude figures in every position. It had, probably, more influence upon the art of the Renaissance than any other single work. To about this time may be attributed the beginning of his poetic creations, of the multitude of which undoubtedly written a few only have come down to us. In Nov., 1505, he was called to Rome by Pope Julius II. to design his mausoleum, the history of which runs through the entire life of the master. Repeated designs and repeated attempts to carry them out were made, only to be frustrated by the successors of the great Pope. The matter finally ended in the reign of Paul III. by the placing in San Pietro in Vincoli of the statue of Moses surrounded by mediocre works finished by Raffaello da Montelupo and others. The Two Captives of the Louvre are part of the work as originally designed. In the spring of 1506 he assisted in the discovery of the Laocoon in the palace of Titus. His favorite antique was the Belvedere Torso, supposed to be a copy of the Hercules Epitrapezius of Lysippus. In April, 1506, probably as a result of the intrigues of Bramante, he was forced to abandon Rome for Florence. In the autumn he joined the Pope at Bologna, and made (1506–07) the bronze statue of Julius which stood over the door of San Petronio and was destroyed in 1511. The ceiling of the Sistine Chapel was begun early in 1508, and finished in Oct., 1512. Julius II. died Feb. 21, 1513, and was succeeded by Cardinal Giovanni de' Medici, son of the great Lorenzo, as Leo X. Michelangelo was diverted from the tomb of Julius by Leo, and employed from 1517 to 1520 in an abortive attempt to build the façade of San Lorenzo in Florence, and in developing the quarries of Carrara and Seravezza. In 1520 he began, by order of Cardinal Giulio de' Medici, the sacristy of San Lorenzo and the tombs of Giuliano and Lorenzo de' Medici with the famous reclining figures on the sarcophagi, perhaps the most thoroughly characteristic of all his works. Leo X. was succeeded by Adrian VI. in 1521, and

ge in turn by Giulio de' Medici as Clement VII. in 1523. On April 6, 1529, Michelangelo was appointed "governor and procurator-general over the construction and fortification of the city walls" in Florence. On Sept. 21, 1529, occurred his unexplained flight to Venice. He returned Nov. 20 of the same year, and was engaged in the defense of the city until its capitulation, Aug. 12, 1530. Before the end of the year 1534 he left Florence, never to return. The statues of the sacristy, including the Madonna and Child, were arranged after his departure. Alessandro Farnese succeeded Clement VII. as Paul III., Oct., 1534. The Last Judgment was begun about Sept. 1, 1535, and finished before Christmas, 1541. Michelangelo's friendship for Vittoria Colonna began about 1538. (See *Colonna, Vittoria.*) The frescos of the Pauline Chapel were painted between 1542 and 1549. They represent the conversion of St. Paul and the martyrdom of St. Peter. He succeeded Antonio da Sangallo in 1546 in the offices which he held, and became architect of St. Peter's Jan. 1, 1547. From this time until his death he worked on the church without compensation. The dome alone was completed with any regard to his plans.

He began his literary studies under the guidance of an old bookseller, and in his spare moments helped his father, a printer by trade, in setting type. He went through the Collège Charlemagne, and entered then on a higher course of study. In 1821 he graduated with the highest university honors, and was called at once to the chair of history in the Collège Rollin (1821–26). His first works were a "Tableau chronologique de l'histoire moderne" (1825), "Tableaux synchroniques de l'histoire moderne" (1826), and "Précis de l'histoire moderne" (1827). He was appointed lecturer at the École Normale in 1827, and published his "Introduction à l'histoire universelle" (1831), "Œuvres choisies de Vico" (1835), "Origines du droit français" (1837), and "Histoire romaine: république" (1839), etc. Michelet began his famous courses of lectures at the Collège de France in 1838, and wrote in that connection "Des Jésuites" (1843), "Du prêtre, de la femme et de la famille" (1844), and "Du peuple" (1845). The clergy succeeded at last in silencing him, and he retired to a life of study. The publication of his "Histoire de France" in sixteen volumes (1833–67) was interrupted by his "Histoire de la révolution française" (1847–53), "Le procès des templiers" (1851), and "Légendes démocratiques du Nord" (1854). Michelet was married twice. He wrote, further, "Les femmes de la révolution" (1854), "L'Oiseau" (1856), "L'Insecte" (1858), "L'Amour" (1859), "La femme" (1860), "La mer" (1861), "La bible de l'humanité" (1864). Michelet made a last return to history in attempting to bring his great work down to date. Death stopped him after he had published but few volumes of his "Histoire du XIXe siècle" (1872–1873).

Michelozzo Michelozzi (mē-ke-lot'sō mē-ke-lot'sē), **Bartolommeo di Gherardo di.** Born at Florence, 1396: died 1472. An eminent sculptor, engraver of gems, and architect. While associated with Donatello in making the monuments of Pope John XXIII., Cardinal Brancacci, and Bartolommeo Aragazzi, he was employed by Cosmo de' Medici to design and build the Medici Palace — now called the Riccardi Palace, as it was enlarged by the Marchese Riccardi in the 17th century. He created a distinctly Florentine type which was subsequently followed in the Strozzi and other Florentine palaces. During his exile (1433–34) with Cosmo de' Medici in Venice, he built the library of San Giorgio Maggiore, adjoining the Convent of San Marco, which Cosmo endowed with many precious manuscripts and books. In Milan he designed the chapel of St. Peter Martyr in Santo Eustorgio, and other buildings. After his return to Florence, Michelozzo displayed great skill in restoring the lower part of the Palazzo Vecchio, which had been dangerously weakened by the weight of the upper stories. He also built the Villas Careggi, Caffagiolo, and Mozzi, and enlarged and rebuilt the Convent of San Marco. Among the few remaining examples of his skill as a sculptor are a silver statuette of St. John Baptist on the altar of the Opera del Duomo in Florence, and a small St. John over the door of the Canonica opposite the Baptistery.

Middle Ages. A period of about a thou years, between the close of what is technic considered ancient history and the first def movements in Europe of the distinctively ern spirit of freedom and enterprise. Its ning is synchronous with that of the dark ages, an variously reckoned as extending to the fall of Co tinople (1453), the invention of printing, the Renais or the discovery of America, in the 15th century, or Reformation, in the early part of the 16th.

For, in truth, through all that period which we ca Dark and Middle Ages, men's minds were possessed b belief that all things continued as they were from th ginning, that no chasm never to be recrossed lay bet them and that ancient world to which they had not c to look back. We who are centuries removed can se there had passed a great and wonderful change thought, and art, and literature, and politics, and so itself: a change whose best illustration is to be found process whereby there arose out of the primitive ba the Romanesque cathedral, and from it, in turn, the er varieties of Gothic. But so gradual was the change each generation felt it passing over them no more t man feels that perpetual transformation by which his is renewed from year to year; while the few who had l ing enough to study antiquity through its contemp records were prevented by the utter want of criticism of that which we call historical feeling, from seeing prodigious was the contrast between themselves and whom they admired. There is nothing more modern the critical spirit which dwells upon the difference bet the minds of men in one age and in another; which c vours to make each age its own interpreter, and j what it did or produced by a relative standard.

Midsummer Night's Dream, A. A comedy by Shakspere, acted in 1595. It is mentioned by Meres in his "Palladis Tamia," which was issued in 1598, and was entered on the "Stationers' Register" Oct. 8, 1600. Two editions were printed in that year—one by James Roberts, the other by Thomas Fisher. Roberts's copy was used for the folio reprint.

Chaucer's legend of "Thisbe of Babilon," and Golding's translation of the same story from Ovid, probably furnished the matter for the Interlude. So much as relates to Bottom and his fellows evidently came fresh from nature as she had passed under the poet's eye. The linking of these clowns in with the ancient tragic tale of Pyramus and Thisbe, so as to draw the latter within the region of modern farce, thus travestying the classic into the grotesque, is not less original than droll.

Mignon (mēn-yôn'). In Goethe's "Wilhelm Meister's Lehrjahre," a mysterious Italian maiden, the daughter of an old harper. She loves Wilhelm, and dies in despair when she finds that her love is not returned.

Two tragic figures are added to these, wandering in a twilight of mystery over the earth—Mignon and the harper; they are daughter and father, unknown to each other, exiles from their native country, and united to Wilhelm Meister by ties of love and gratitude. None of Goethe's creations appeal more strongly to the depths of the human soul than these two characters, with their touching songs. Solemn echoes of old mysticism seem revived in these songs full of earthly misery and longing for heaven; the laments of the loving but unloved maiden, the homeless, friendless child, who may not reveal her inmost soul because her lips are sealed by a vow, alternate with the tears of the guilty, God-forsaken, lonely, and remorseful old man.

Milan, It. **Milano** (mē-lä′nō), G. **Mailand** (mī′-länd). The capital of the province of Milan, Italy, situated on the river Olona, in the Lombard plain, in lat. 45° 28′ N., long. 9° 11′ E.: the Roman Mediolanum. It is the second city in size in Italy, the chief city in Lombardy, and the chief commercial and financial center of the country. As the center of a rich agricultural district it exports dairy and other farm products. It has important manufactures of furniture, woolens, silk, machinery, gloves, etc.; and is noted also as an educational, musical, and theatrical center. The cathedral, begun in its present form in 1387, is popularly celebrated for the profusion of its sculptured decoration and pinnacles, and the beauty of its material (white marble); but as an architectural whole it does not justify its reputation, despite the beauty of such details as the Flamboyant tracery of the great windows of the apse, and the majestic effect of the interior. The central lantern and spire are graceful, but the other parts are not well proportioned, and the west front, with its semi-modern jumble of Pointed and classical forms, is barbarous, while the decoration is cold and without the vigorous life of good medieval art. There are 5 aisles. The chief dimensions are: length, 486 feet; breadth, 252; transepts, 288; height of vaulting, 153; height of spire, 355. It is surpassed in size in Italy by St. Peter's only. The cathedral contains many beautiful tombs. The Ospedale Maggiore, founded by Francesco Sforza in 1456, is one of the most beautiful creations of Lombard brick architecture, with two tiers of rich Pointed arches inclosing double Pointed windows, the lower tier inclosed in a Corinthian arcade. Other objects of interest are the gallery Vittorio Emmanuele, Brera (with picture-gallery and library), Museum Poldi-Pezzoli, archæological and some other museums, Ambrosian library, Piazza de' Mercanti, the churches of the Monastero Maggiore, of Santa Maria delle Grazie (with the "Last Supper" of Leonardo da Vinci), of San Ambrogio, and of San Lorenzo, the Arco della Pace, and the Scala theater. The tradition is that Milan was founded by the Celtic prince Bellovesus about 600 B. C. It was the capital of the Insubrian Gauls; was taken by the Romans 222 B. C.; and was one of the chief cities of the later Roman Empire, and an imperial residence. Ambrose was bishop of Milan 374–397. It was sacked by Attila in 452; was destroyed by the Goths in 539; belonged to Lombardy and later to the empire; was taken and nearly destroyed by Frederick Barbarossa in 1162; was rebuilt by the Lombard League in 1167; was ruled by the Torre, Visconti, and Sforza families; and has been the capital of the Milanese, or duchy of Milan (which see), the Cisalpine Republic, the kingdom of Italy (1805), and the Lombardo-Venetian kingdom. It was the scene of an insurrection against Austrian rule in 1848, and of outbreaks in 1849 and 1853. In 1859 it was united to the kingdom of Sardinia. It has been noted in art as the residence of Bramante, Leonardo da Vinci, etc. Population (1901), commune, 491,460.

It has been many times enlarged and reprinted. Any stale jest is now known as a "Joe Miller" from the fact that it is supposed to have at some time emanated from this source.

D. from the University of London, and in 1845 he was made an F. R. S. His first experiments in spectrum analysis were published in a paper before the British Association in 1845, in which diagrams of flame spectra were first shown. In 1862 this was followed by a paper on the "Photographic Transparency of Various Bodies," illustrated by photographs of the spectra of twenty-five metals. With the assistance of Dr. Huggins he began in 1862 experiments on the spectra of the heavenly bodies, procuring the first trustworthy results in solar chemistry. They were awarded the gold medal of the Royal Astronomical Society for their results. In 1851 he published a "Report on the Metropolitan Water Supply." He invented a self-registering thermometer for deep-sea soundings.

He married Sarah, daughter of Paul Jeffrey, a merchant tailor. He was a man of high character, a good scholar, and devoted to music.

Milton, John. Born at London, Dec. 9, 1608: died there, Nov. 8, 1674. A celebrated English poet. He was the son of John Milton, a scrivener. His tutor was Thomas Young, graduate of St. Andrews University, afterward well known as a Presbyterian clergyman and master of Jesus College, Cambridge. He also attended St. Paul's School until 1624. At 16 he entered Christ's College, Cambridge, in the grade of pensioner, and graduated in 1629. To this period belong most of his Latin poems, the "Ode on the Nativity" (1629), the sonnet to Shakspere (1630), and the sonnet to the nightingale, etc. For the next six years he devoted himself to literature at Horton, near Windsor, where he wrote "Ad Patrem," "L'Allegro," "Il Penseroso," "Comus" (1634), and "Lycidas" (Nov., 1637). In 1638 he went to Italy, meeting Grotius in Paris and Galileo in Florence. The Scottish war called him back in 1639. The first suggestion of "Paradise Lost," in the form of a tragedy, dates from 1640. After the meeting of the Long Parliament (Nov., 1640), Milton joined in the attacks on the Episcopacy, and began his political writings with "Of Reformation touching Church Discipline in England" (1641), "The Reason of Church Government urged against Prelacy" (1642), and others. In 1643 he married as his first wife Mary Powell, of Forest Hill, Oxfordshire. She was the daughter of a Royalist, and was only 17 years old; she found life dull with him, and abandoned him a month later. This desertion was the occasion of his pamphlets on divorce, and the persecution which followed suggested the "Areopagitica," a plea for a free press (the most popular of his prose works). She returned to him after a few years, and he forgave her. She died in 1652. Of this marriage three children, daughters, lived to maturity. After the execution of Charles I., Milton was made Latin secretary to the new Commonwealth (March, 1649). Of his political writings during this period the most important are the "Eikonoklastes" (1649), in answer to the "Eikon Basilike" of John Gauden, and the famous "Defensio prima" or "Pro Populo Anglicano Defensio" (1650), an answer to the "Defensio Regia pro Carolo I." by Claude de Saumaise of Leyden. The "Defensio secunda" appeared in May, 1654. By May, 1652, he had become totally blind. In 1656 he married Catharine Woodcock, who died in 1658; and in 1663 he married Elizabeth Minshull, who survived him. Up to the period of his third marriage his domestic life had been rendered unhappy by the undutifulness of his daughters, who were impatient of the restraints and employments his blindness imposed upon them. At the Restoration he was freed from all legal consequences of his actions by the Indemnity Act (Oct., 1660). "Paradise Lost" was actually begun in the epic form in 1658, finished before July, 1665, and published in 1667. He sold his rights in the poem to Samuel Simmons, printer, for £5 down, and the promise of three subsequent payments of £5 each. It was entered on the "Stationers' Register" Aug. 20, 1667. Suggestions for "Paradise Lost" may have come from the Anglo-Saxon poem attributed to Cædmon (published in 1655), the "Adamo" of Andreini, and the "Lucifer" of Joost van Vondel (1654). In 1669 appeared his history of Britain to the Norman Conquest, and in 1671 "Paradise Regained" and "Samson Agonistes." His numerous other works in Latin and English were mostly polemical. His last political pamphlet, "Of True Religion, Heresy, Schism, Toleration, etc.," was published in 1673.

h was to apply and adapt it to the vary-

The beginning of the Mishnah goes back to the time of the Maccabees. It was delivered in the schools orally from generation to generation. At the end of the 2d century A. D. the patriarch Judah I. collected, arranged, and codified the accumulated material in its present shape. The numerous rules and decisions are arranged according to subject in 6 orders (*sedarim*): (1) seeds (*zeraim*), on agriculture; (2) festivals (*moed*); (3) women (*nashim*), on connubial affairs; (4) damages (*nezikim*), civil and criminal laws; (5) sacrifices (*kodashim*); (6) purifications (*taharoth*). "Miss Betsy Thoughtless" is rather a clever work and interesting as the first really domestic novel, according to modern ideas, that exists in the language. Miss Kilmansegg and her Precious Leg. A poem by Thomas Hood, which, "as a sustained piece of metrical humor, is absolutely unique."

The poem is full of rollicking, unhampered fancy; long as it is, the movement is so rapid that it almost seems to have been written at a heat,—at least, can easily be read at a sitting. Though not without those absurd lapses which constantly irritate us in the perusal of Hood's lighter pieces, it is the most lusty and characteristic of them all. Standing at the front of its author's facetious verse, it renders him the leading poet-humorist of his generation.
Stedman, Victorian Poets, p. 80.

Mizpah (miz'pä), or **Mizpeh** (miz'pe). [Heb., 'watch-tower.'] The name of several places mentioned in Old Testament history. (*a*) A place in Gilead: sometimes identified with Tel es-Safiyeh (about lat. 32° 5′ N.). (*b*) A place in Benjamin, Palestine: probably on the site of Nebi-Samwil, 5 miles northwest of Jerusalem.

Mispeh, the culminating point of the tribe of Benjamin, became the meeting-place of the tribes, the Washington of the Israelite federation. This mountain, which rises nearly 4,000 feet above the level of the sea, on the horizon of Jerusalem, was not made to serve as the site of a great city. On the contrary, it was an excellent spot for those federal diets which were soon to assume a sacred character. The ark was never established there; but the *sofet* was induced to make it his habitual residence, and no doubt the political importance of Mispeh had some weight in the providential selection of Jerusalem for such brilliant destinies. Jerusalem is only a league from Mispeh, and from the top of the mountain the little acropolis (*millo*) of the Jebusites on the hill of Sion must have been visible. *Renan*, Hist. of the People of Israel, I. 302.

Mizraim (miz-rā'im). The Hebrew name of Egypt.

Mizraim, the brother of Cush, is the Hebrew name of Egypt. It signifies 'the two Mazors,' or walls of fortification. On the Asiatic side Egypt was defended from attack by a chain of fortresses, sometimes called Shur, or 'the wall,' by the Canaanites, and it was from this line of defence that the name of Mazor was derived. The name, however, did not apply to the whole of Egypt. It denoted only Lower or Northern Egypt, which extended from the sea to the neighbourhood of the modern Cairo. The rest of the country was Upper Egypt, called Pe-to-Res, 'the land of the South,' in ancient Egyptian, the Pathros of the Old Testament (Isaiah xi. 11). The division of Egypt into two provinces dated from prehistoric times, and has been remembered through all the vicissitudes of Egyptian history down to the present day. It was essentially 'the double land,' and its rulers wore a double crown. Hence the use of the dual form, "the two Mazors," in Hebrew. Here and there, where Lower Egypt is alone alluded to, the singular Mazor is employed, but otherwise the dual "Mizraim" only is found throughout the Old Testament. *Sayce*, Races of the O. T., p. 52.

Mnevis (nē'vis). The ancient Egyptian sacred bull of Heliopolis.

Apis of Memphis, Mnêvis of Heliopolis, and Pakis of Hermonthis, are all links that bind together the Egypt of the Pharaohs and the Egypt of the stone age. They were the sacred animals of the clans which first settled in these localities, and their identification with the deities of the official religion must have been a slow process, never fully carried out, in fact, in the minds of the lower classes. *Sayce*, Anc. Empires, p. 66.

Moab (mō'ab). A Semitic tribe settled at the southeastern end of the Dead Sea (the modern district of Kerak). In Gen. xix. Moab and Ammon are represented as descendants of Lot, and their names are explained from their incestuous origin. The Moabites appear to have been a warlike tribe, and the Israelites during their wanderings through the desert tried to avoid an encounter with them. During the period of the Judges they opposed the Israelites until they were routed by Ehud (Judges iii.). Saul and David, whose ancestress Ruth was a Moabitess, subjugated them. After Solomon's death Moab fell to the northern kingdom. After Ahab's death Mesha refused to pay tribute. They were afterward, according to the cuneiform inscriptions, subjected to Assyria. Shalman, Camoshnadab, and Mussari being mentioned as kings of Moab paying tribute. They participated in the fall of Jerusalem through the Babylonians, and Nebuchadnezzar subjected them on his expedition against Egypt. They appear after the exile as seeking to maintain friendly relations with the Judeans. Later they were subjected to the Nabatæans, the Maccabees, and the Romans. Chemosh was their principal divinity; another was Baal Peor. The only authentic monument of the Moabite civilization thus far known is the so-called Moabite Stone. See below.

Moabite Stone. A slab of black basalt bearing an inscription of 34 lines in Hebrew-Phenician characters: the oldest monument of the Semitic alphabet. It was found in 1868 at the ancient Dibon of Moab. Before it could be removed it was broken in many pieces, through the jealousies of Arab tribes, but a squeeze of the inscription had been previously taken, and the chief fragments are now in the Louvre Museum. The stone is the most important surviving relic of Moabite civilization, and is believed to date from about 850 B. C. The inscription records the victories of King Mesha over the Israelites. The first spins the thread of life, the second fixes its length, and the third severs it. Also *Moirai.*

Mœris (mē′ris), **Lake.** [Gr. *ἡ Μοίριος λίμνη.*] According to Herodotus, an artificial lake in Middle Egypt, west of the Nile, 50 miles southwest of Cairo, near the modern Lake Birket el-Kurun. Its existence has been doubted. See the extract.

A king, named Mœris, desired to create a reservoir in the Fayoom which should neutralise the evil effects of insufficient or superabundant inundations. This reservoir was named, after him, Lake Mœris. If the supply fell below the average, then the stored waters were let loose, and Lower Egypt and the Western Delta were flooded to the needful height. If next year the inundation came down in too great force, Lake Mœris received and stored the surplus till such time as the waters began to subside. Two pyramids, each surmounted by a sitting colossus, one representing the king and the other his queen, were erected in the midst of the lake. Such is the tale told by Herodotus, and it is a tale which has considerably embarrassed our modern engineers and topographers. How, in fact, was it possible to find in the Fayoom a site which could have contained a basin measuring at least ninety miles in circumference? The most reasonable theory is that of Linant, who supposes Lake Mœris to have extended over the whole of the lowlying land which skirts the Li cliffs between Illahoun and Medinet el-Fayoom; br cent explorations have proved that the dikes by which pretended reservoir was bounded are modern works, e ed probably within the last two hundred years. I no lo believe that Lake Mœris ever existed. If Herodotu actually visit the Fayoom, it was probably in summ the time of the High Nile, when the whole district sents the appearance of an inland sea. What he too the shores of this lake were the embankments whic vided it into basins and acted as highways betwee various towns. *Maspero,* Egypt. Archæol. (trans.),

mmed (mō-ham′ed), or **Mahomet** (ma- et). ['The praised one': the name is also en *Mahomed*, *Muhammad* (the Arabic), *Mahmoud*, *Mehemet*, etc.] Born at Mecca, ia, about 570: died at Medina, Arabia, 8, 632. The founder of Mohammedanism, am ('surrender,' namely, to God). He was sthumous son of Abdallah by his wife Amina, of the of Hashim, the noblest among the Koreish, and rought up in the desert among the Banu Saad by a in woman named Halima. At the age of six he lost other, and at eight his grandfather, when he was for by his uncle Abu-Talib. When about twelve old (582) he accompanied a caravan to Syria, and n this occasion have come for the first time in con- ith Jews and Christians. A few years later he took the "sacrilegious war" (so called because carried ing the sacred months, when fighting was for- n) which raged between the Koreish and the Banu zin 580–590. He attended sundry preachings and ions at Okatz, which may have awakened his poeti- d rhetorical powers and his religious feelings; and me time was occupied as a shepherd, to which he refers as being in accordance with his career as a et, even as it was with that of Moses and David. When y-five years old he entered the service of the widow jah, and made a second journey to Syria, on which in had an opportunity to come in frequent contact Jews and Christians, and to acquire some knowledge ir religious teachings. He soon married Khadijah, was fifteen years his senior. Of the six children she bore him, Fatima became the most famous. 5 he attained some influence in Mecca by settling ute about the rebuilding of the Kaaba. The im- ons which he had gathered from his contact with am and Christianity, and from Arabic lore, began trongly to engage his mind. He frequently retired tary places, especially to the cave of Mount Hira, north cca. He passed at that time (he was then about years old) through great mental struggles, and re- dly meditated suicide. It must have been during lonely contemplations that the yearnings for a mes- r from God for his people, and the thought that he lf might be destined for this mission, were born in rdent mind. During one of his reveries, in the -of Ramadhan, 610, he beheld in sleep the angel el, who ordered him to read from a scroll which d before him the words which begin the 96th sura ter) of the Koran. After the lapse of some time, a d vision came, and then the revelations began to fol- ne another frequently. His own belief in his mis- s apostle and prophet of God was now firmly estab- . In Medina, er a teacher was deputed, the new religion spread ly. To this period belongs the vision or dream of iraculous ride, on the winged horse Borak, to Jeru- , where he was received by the prophets, and thence ded to heaven. In 622 more than 70 persons from na bound themselves to stand by Mohammed. The ns proposed to kill him, and he fled on the 20th of 622, to Medina. In 624 the first battle for the faith took place be- Mohammed and the Meccans in the plain of Bedr, in the latter were defeated. At this time, also, Mo- med began bitterly to inveigh against the Jews, who ot recognize his claims to be the "greater prophet" ssed by Moses. In 632 the et made his last pilgrimage to Mecca, known as the ed pilgrimage," or the pilgrimage of the "an- ncement" or of "Islam." In the same year he died planning an expedition against the frontier of the ine empire. Mohammed was a little above the dle height, of a commanding figure, and is described as ed a modest, tender, and generous disposition. His le of life was very simple and frugal. He mended n clothes, and his common diet was barley-bread ater. But he enjoyed perfumes and the charms of n. His character appears composed of the strongest nsistencies. He could be tender, kind, and liberal, but on occasions indulged in cruel and perfidious assassinations. With regard to his prophetic claims, it is as difficult to assume that he was sincere throughout, or self-deceived, as that he was throughout an impostor. In his doctrines there is practically nothing original. The legends of the Koran are chiefly drawn from the Old Testament and the rabbinical literature, which Mohammed must have learned from a Jew near Mecca, though he presents them as original revelations by the angel Gabriel. See *Koran*.

Molech (mō'lek), or **Moloch** (mō'lok). ['King.' In 1 Ki. xi. 7, he is mentioned as an idol of the Ammonites, but the worship of Molech was spread among all the Canaanitish and Semitic tribes.] A form of Baal, the sun-god, or the personification of the male generative principle in nature. Molech represents the sun in his fierce destructive aspect. The worship of Molech consisted in offering human sacrifices. The god was represented with a bull's head and long arms to receive the victims, which were lifted up to an opening in the breast of the brass statue and rolled into the furnace blazing inside. Whether the victims were first killed, or were burned alive, is a disputed question. The worship of Molech was at different periods introduced into Israel, with its principal place in the valley of Hinnom: so under Ahaz (king of Judah 734–728 B. C.), Manasseh (697–642), and Amon (642–640). In the cuneiform inscriptions *malik* ('ruler,' properly 'decider') can be the epithet of any god, but it is especially applied to Adar, who is among others the god of the destructive south or midday sun, and in the Old Testament is called Adrammelech (Adar-malik): to him children were sacrificed (2 Ki. xvii. 31), although in the Assyrian-Babylonian literature no reference to human sacrifices in honor of a divinity has been found. At Carthage the bloody rites of Molech were officially suppressed by the emperor Tiberius (14–37 A. D.).

Besides his almost continuous wars with the Tlascalans and Tarascans, he carried his arms far southward, and is said to have invaded Honduras: thousands of captives were brought back for sacrifice in the temples. The tidings of ships and white men on the coast excited his superstitious fears. When Cortés landed he sent him presents, but tried to dissuade him from coming to Tenochtitlan. Cortés insisted, and reached the city with his army in Nov., 1519. He was well received and given rich presents, but, fearing violence from the natives, seized Montezuma in his own house and confined him in the Spanish quarters as a hostage. The Aztecs at length rose in arms and attacked the quarters: Montezuma, at the request of Cortés, appeared on the wall and attempted to expostulate with them, but was received with a shower of stones, and died of his wounds four days later. Descendants of one of his daughters are still living in Mexico. After the Spanish conquest Montezuma became a mythical personage among the Indians: this hero or hero-god they mention to strangers as their principal deity, although they do not pay him the slightest worship. In New Mexico modern travelers and tourists have thought that they have discovered a Montezuma worship, which, however, does not exist.

Personal and literary interest both appear in a very high degree in the Memoirs of Anne Marie Louise de Montpensier, commonly called La Grande Mademoiselle. The only daughter of Gaston of Orléans and of the Duchesse de Montpensier, she inherited enormous wealth and a position which made it difficult for her to marry any one but a crowned head. In her youth she was self-willed and by no means inclined to marriage, and prince after prince was proposed to her in vain. During the Fronde she took an extraordinary part — heading armies, mounting the walls of Orléans by a scaling-ladder, and saving the routed troops of Condé, after the battle of the Faubourg Saint Antoine, by opening the gates of Paris to them, and causing the cannon of the Bastille to cover their flight.

Moon (mön). A heavenly body which revolves around the earth monthly, accompanying the earth as a satellite in its annual revolution, and shining by the sun's reflected light. Next to the sun, the moon is the most conspicuous and interesting of celestial objects. The rapidity of its motion, the variety of its phases, and especially the striking phenomena of its eclipses, compelled the attention of the earliest observers; and the fact that the longitude can be determined from lunar observations has given the theory of the moon's motion economic importance. Of all the heavenly bodies (meteors excepted), the moon is nearest to us. Its mean distance is a little more than sixty times the radius of the earth, or 238,800 miles. Its diameter is 2,162 miles (about 0.273 of the earth's equatorial diameter), and its volume is about $\frac{1}{49}$ of that of the earth. It revolves around the earth in 27d. 7h. 43m. 11.5s.; the time from new moon to new moon is 29d. 12h. 44m. 2.7s. The moon always presents nearly the same face to the earth. Moor (mör), **Karl.** The principal character in Schiller's play "Die Räuber" ("The Robbers").

The hero of his first drama, the enthusiastic young robber, Moor, like Goethe's Götz, has recourse to force on his own responsibility. He has all the feelings of a Werther, and, like Werther, he falls foul of society. Werther turns the destroying weapon upon himself, but Moor directs it against society. He is a rebel, like the Satan of Milton and of Klopstock, and a vagabond, like Goethe's Crugantino; but, while love and reconciliation lead Crugantino back to the bosom of his family, the shameful intrigues of an unnatural brother Franz turn Moor into a robber and a murderer. Hostile brothers had already been depicted by Fielding in romance, and by Leisewitz and Klinger in tragedy: the two latter had introduced fratricide upon the stage itself, and Gessner had written a patriarchal romance based on the story of Cain and Abel; but Schiller far surpasses these writers in power in the grand scene where the criminal, in fear of the avengers of his crime, pronounces and carries out his own sentence.

It is bounded by Bohemia (partly separated by the Mährische Gebirge) on the west and northwest, Prussian Silesia and Austrian Silesia (separated by the Sudetic Mountains) on the north and northeast, Hungary (separated by the Little Carpathians) on the southeast, and Hungary and Lower Austria on the south. The surface is largely mountainous and table-land: it is drained in great part by the March. Moravia is to a great degree an agricultural country. It produces rye, oats, barley, fruit, vegetables, etc.; has manufactures of cotton, woolen, sugar, and linen; and has mines of coal and iron. It has 43 representatives in the Austrian Reichsrat, and has a Landtag of 100 members. The prevailing religion is Roman Catholic. The majority of the inhabitants are Slavs in race and language, closely allied to the Czechs: but about 30 per cent. are Germans. The early inhabitants were Germanic tribes. The region was recolonized by Slavs. Christianity was introduced from Constantinople in the 9th century, but the Moravians were subsequently brought within the influence of Rome. Under Svatopluk in the end of the 9th century Moravia was the center of a short-lived great Slavic power, Great Moravia, which was overthrown by the Magyars in 906. Moravia was permanently united with Bohemia in 1029, and after that generally shared the fortunes of that kingdom. It became a margraviate in 1197; passed to the house of Hapsburg in 1526; and became a crownland separate from Bohemia in 1849. Area, 8,583 square miles. Population (1890), 2,276,870.

The organization at present has three home provinces (German, British, and American — each of which has its own government by synod) and several mission provinces. All these are represented by a general synod which meets every 10 years in Herrnhut. The ministers are bishops (not diocesan), presbyters, and deacons. The worship is liturgical. The members of the denomination believe in the Scriptures as the only rule of faith and practice, and maintain the doctrines of the total depravity of human nature, the love of God the Father, the actual humanity and godhead of Jesus Christ, the atonement, the work of the Holy Spirit, good works as the fruit of the Spirit, the second coming of Christ, and the resurrection of the dead. The Moravians are especially noted for their energy and success in missionary work.

He governed with wisdom and liberality, and was reelected in 1834; but opposition to the union led to numerous revolts, and when his second term expired (Feb. 1, 1839) there had been no reelection. Morazan made a vain attempt to keep the union together by force, and was supported by Salvador; but he was finally defeated by Carrera at Guatemala, March 19, 1840, and fled to Peru. In April, 1842, he invaded Costa Rica with a view to making it the basis of federal reorganization: he was at first successful, and assumed the executive of Costa Rica in July, but was deposed by a counter-revolution (Sept. 11), captured, and shot.

In 1689 he was appointed councilor to William III. and first lord of the treasury, and was created earl of Monmouth. Later he incurred the displeasure of the court, eventually losing all his places, and in 1697 was imprisoned 3 months in the Tower. On June 19, 1697, he succeeded his uncle as earl of Peterborough, and on the accession of Anne was again in favor at court. In 1705 he was appointed admiral and commander-in-chief of the fleet jointly with Sir Cloudesley Shovel, and was largely responsible for the capture of Barcelona Sept. 28. In Jan., 1708, his conduct in Spain was investigated by the House of Lords, and he was acquitted. In 1710 he was ambassador extraordinary to Vienna, and in 1711 to Frankfort. He accepted a post at the court in order to be near his adopted daughter, Esther, who had been elevated to the rank of queen, and with her help frustrated the machinations of Haman which tended to the extermination of the Jews in the Persian empire. In remembrance of this deliverance the feast of Purim is still celebrated by the Jews in the month of Adar (March–April).

Mordecai. In George Eliot's novel "Daniel Deronda," a Jew who believes himself inspired with a mission to elevate and reunite the Jewish people.

> It might be said, in answer to some of these questions, that as a fact Mordecai is an ideal study from a veritable Jew, Cohn or Kohn, one of the club of students who met some forty years since at Red Lion Square, Holborn; and that recently a scheme for the redemption of Palestine for Israel was actually in contemplation among members of the Jewish race. But to criticise "Daniel Deronda" from the literal, prosaic point of view, would be as much a critical stupidity as to undertake the defence of Shakspere's "King Lear" from the charge of historical improbability.

After the death of Garrick, Jan. 20, 1779, her religious tendencies became stronger. In 1787 she was attracted by Wilberforce's agitation against the slave-trade, and was much interested in establishing schools among the poor as an antidote to the prevailing atheism. She wrote in 1792 "Village Politics, by Will Chip," followed by "Cheap Repository Tracts" (1795–98), one of which was "The Shepherd of Salisbury Plain." Some of them were illustrated by John Bewick. In 1508 he went to France. After his second marriage in 1511 he moved to Crosby Place, Bishopsgate Street Without. In May, 1515, he was sent as ambassador to Flanders to settle disputes with the merchants of the Steelyard. "Utopia" was published in 1516. In 1518 he was made master of bequests by Henry VIII. and privy councilor. In June, 1520, he was with Henry at the Field of the Cloth of Gold, and met Budæus. In 1521 he was knighted and made subtreasurer to the king; in April, 1523, speaker of the House of Commons; and in 1525 high steward of Cambridge University. He defended the papacy against Luther, suggested the "Defensio Septem Sacramentorum" of Henry VIII., 1521, and opposed Tyndale. On Oct. 25, 1529, he succeeded Wolsey as chancellor. He opposed the reforms passed by Parliament of Nov. 3, 1529, and the projected divorce of the king from Catharine, and resigned May 16, 1532. By act of Parliament in March, 1534, an oath of adherence to the act which vested the succession in the issue of Anne Boleyn, and of renunciation of the Pope, was imposed. In 1800 he was appointed to the command of the army of the Rhine by the first consul, Bonaparte; and in the same year gained a decisive victory over the Austrians at Hohenlinden (Dec. 3). Having placed himself at the head of a party of republicans and royalists opposed to Napoleon, he was in 1804 sentenced to two years' imprisonment on the charge of complicity in Cadoudal and Pichegru's conspiracy against the first consul. Mormons (môr'mọnz). The adherents of a religious body in the United States, which calls itself "The Church of Jesus Christ of Latter-day Saints." This denomination was founded in 1830 by Joseph Smith, a native of Sharon, Vermont. The government of the church is a hierarchy consisting of two orders of priesthood, an order of Melchizedek (the higher), and an Aaronic or lesser order. The former is presided over by a president and two counselors whose authority extends over the entire church, and it includes the twelve apostles, the seventies, the patriarch, the high priests, and the elders. The twelve apostles constitute a traveling high council, which ordains other officers and is intrusted with general ecclesiastical authority; the seventies are the missionaries and the propagandists of the body; the patriarch pronounces the blessing of the church; the high priests officiate in the offices of the church in the absence of any higher authorities; and the elders conduct meetings and superintend the priests. The Aaronic priesthood includes the bishops, the priests, the teachers, and the deacons: the two last named are the subordinate orders in the church. The duties of the bishops are largely secular. The entire territory governed by the church is divided and subdivided into districts, for the more efficient collection of tithes and the administration of the government. The Mormons accept the Bible, the Book of Mormon, and the Book of Doctrine and Covenants as authoritative, and regard the head of their church as invested with divine authority, receiving his revelations as the word of God, the Lord. They maintain the doctrines of repentance and faith, a literal resurrection of the dead, the second coming of Christ and his reign upon the earth (having the seat of his power in their territory), baptism by immersion, baptism for the dead, and polygamy as a sacred duty for those who are capable of entering into such marriage. The Mormons settled first at Kirtland, Ohio, then in Missouri, and, after their expulsion from these places, in Nauvoo, Illinois. In 1847–48 they removed to Utah, and have since spread into Idaho, Arizona, Wyoming, etc. They have frequently defied the United States government. There is also a comparatively small branch of the Mormon Church, entitled "The Reorganized Church of Jesus Christ of Latter-day Saints," which is opposed to polygamy and is ecclesiastically independent of the original organization. Mosca (mos'kä). [L., 'a fly.'] In Ben Jonson's play "Volpone, or the Fox," a parasite, in the sense of the classic drama. His pliancy and presence of mind render him invaluable to his master, Volpone, upon whom he finally turns.

His inimitable parasite, or (as the Greek and Roman authors expressed it) his *Fly*, his Mosca; and in this finished portrait, Jonson may throw the gauntlet to the greatest masters of antiquity: the character is of classic origin; it is found with the contemporaries of Aristophanes, though not in any comedy of his now existing; the Middle Dramatists seem to have handled it very frequently, and in the New Comedy it rarely failed to find a place; Plautus has it again and again, but the aggregate merit of all his parasites will not weigh in the scale against this single Fly of our poet. *Gifford*, Notes to Jonson's "Fox," p. 399.

Moscow (mos'kou). [F. *Moscou,* G. *Moskau,* *Moskva,* Russ. *Moskva,* named from the river *Moskva.*] 1. A government of central Russia, surrounded by the governments of Tver, Vladimir, Ryazan, Tula, Kaluga, and Smolensk. The surface is level and undulating. It is the leading manufacturing province of Russia. Area, 12,859 square miles. Population (1897), 2,433,356.

2. The capital of Moscow government, on the Moskva in lat. 55° 45′ N., long. 37° 34′ E. It is the second capital of the empire, the place of coronation, and the seat of the metropolitan; the chief commercial and railway center of Russia, with important domestic, European, and Asiatic trade; and the chief manufacturing city, having important woolen, cotton, silk, leather, etc., factories. The chief quarters are the Kremi (in the center), Kitai-Gorod (trading quarter), Bycloi-Gorod, and Zemlyanoi-Gorod. Among the buildings (besides those of the Kremlin, which see) are many churches. The Cathedral of the Annunciation, within the Kremlin, has been several times rebuilt, the last time after a fire in 1547. The plan is rectangular, with 3 shallow apses, projecting angle-pavilions, and a Byzantine arched porch. The interior is frescoed, and is paved with jasper and agate: the iconostasis and treasury are rich with imperial and princely gifts. This church is the usual place of baptism and marriage of the czars. The Cathedral of the Assumption, within the Kremlin, the church in which the czar is crowned, was founded in 1326, and rebuilt in the next century. The size is small, but as an example of the old Russian style, and for the gorgeous magnificence of the interior, there is no more interesting building in Russia. The plan is rectangular, with a deep triple apse containing the bema and parabemata, and flanked by chapels. The domes are supported by 4 great cylindrical pillars which are covered with bands of frescos on a gold ground: the walls also are resplendent with gold. The ornaments on the iconostasis, together with the church plate, amount to 106 pounds of gold. The icons of the iconostasis and many of the shrines and offerings in the treasury are not only old, but inherently of high artistic value. The Cathedral of the Archangel Michael, within the Kremlin, was founded 1333, but rebuilt in 1509. It is rectangular, with 5 gilded domes, the central one, which is much the largest, of bulbous form. In this church are the tombs of the Ruriks and Romanoffs from the date of its founding to Peter the Great, including that of Ivan the Terrible. The iconostasis and the treasury are remarkably rich. The Cathedral of St. Basil the Beatified, begun in 1555, is one of the most fantastic architectural creations in existence, though it was built by an Italian architect, who applied in it, in new combinations, the principles of the old Russo-Byzantine builders. The general outline is pyramidal; there are 11 bulbous domes raised on high drums, all different in surface-ornament and in color. The brilliant group of domes and spires is completed by several projecting porches, differing in form and with high pyramidal roofs. One of these is elaborately arcaded, and forms a belfry. The Temple of the Saviour, a national monument in commemoration of the evacuation of Moscow by Napoleon, was built between 1839 and 1883. The church has the form of a Greek cross, with a domed turret at every angle. The monument is crowned by a pointed gilded dome 98 feet in diameter, raised on a high arcaded drum: the cross is 340 feet above the ground. The tower of Ivan Velliki (the Great), within the Kremlin, finished 1600, and architecturally a unique structure, consists of 6 stages, 5 of them octagonal and 2 of them recessed, and the highest cylindrical and crowned by a bulbous, metal-sheathed dome. The third and fourth stages are arcaded, and in every arch a bell is suspended. One of the bells weighs 64 tons. The height is 325 feet to the top of the cross. Other buildings of interest are the theater, riding-hall, Hall of the Nobility, and foundling hospital. The university, founded in 1755, has a library of 217,000 volumes, and the museum has a library of 500,000 volumes. The city was founded in the middle of the 12th century. The principality of Moscow was united with that of Vladimir, and Moscow became the capital of the grand principality of Moscow (see below) and seat of the metropolitan in the first part of the 14th century. It was taken and burned by Lithuanians and Tatars in the 14th century, nearly destroyed by fire in 1547, and burned by the khan in 1571. The capital was removed to St. Petersburg by Peter the Great. Moscow was burned by its inhabitants during its occupation by the French in Sept., 1812. Population (1897), 988,610.

Moscow, Grand Principality of, or **Muscovy** (mus'kō-vi). A grand principality which grew up around Moscow, and developed into the Russian empire. It was founded by Daniel, son of Alexander Nevski, about 1295, and was united with the grand principality of Vladimir (or Suzdal) in 1319. Ivan I., ruler of Vladimir and Moscow, made the city of Moscow the seat of government. His successor Simeon took the title of "grand prince of all the Russias." The work of consolidation was greatly advanced under Ivan III., who annexed Perm (1472), Novgorod (1478), Tver (1482), Vyatka (1489), etc. He freed Moscow from tribute to the Mongols, and by conquests from Lithuania carried the western border to the Desna and then to the Soya. Moses (mō'zez). [ME. *Moses,* LL. *Moyses, Mosses,* Gr. *Μωυσῆς, Μωσῆς,* explained as 'drawn from the water.'] In Old Testament history, the lawgiver of the Israelites and organizer of the

Israelitish nation. After his birth his mother kept him concealed three months to evade the command of the king of Egypt that all male Hebrew children be drowned in the Nile. He was then exposed in a box among the rushes on the banks of the Nile, and was found by an Egyptian princess who adopted and reared him. After he had grown up, he one day struck an Egyptian whom he saw cruelly beating a Hebrew slave. Fearing punishment, he fled from Egypt into the desert, and halted at an oasis inhabited by the Kenites. Here he married Zipporah, the daughter of Reuel, the priest of Midian, and tended the flocks of his father-in-law. It was here that the prophetic spirit came upon him, and he decided to return to Egypt for the purpose of delivering his brethren from slavery. On his return his brother Aaron joined in his plans. His first efforts in their behalf only resulted in the infliction of more severe burdens and greater cruelty. Presently, however, a series of most disastrous and terrifying afflictions visited Egypt, and the king finally concluded that these had been brought upon the land by the unknown God whose name Moses had invoked. He accordingly ordered the Israelites to leave at once, and they began their departure on the 15th of Nisan (March–April), an event which is known as the Exodus. Moses was the leader of the Israelites during their 40 years' journeyings in the wilderness, which period he utilized for perfecting a civil organization and for the preparation of a code of laws of a high ethical, religious, sanitary, and political character. Jewish tradition ascribes to him the authorship of the Pentateuch with the exception of the verses describing his death. This tradition has been generally accepted by the Christian and Mohammedan world. Of late biblical critics have denied the Mosaic authorship of the Pentateuch. With few exceptions however, they consider Moses as a historical character and as the organizer of the Hebrew nation.

Amongst all lawgivers, founders of states, and teachers of mankind, none has equalled Moses. Not only did he, under the most inauspicious circumstances, transform a horde of slaves into a nation, but he imprinted on it the seal of everlasting existence: he breathed into the national body an immortal soul. He held before his people ideals the acceptance of which was indispensable, since all their weal and woe depended upon the realisation or non-realisation of those ideals. Moses could well declare that he had carried the people as a father carries his child. His patience and his courage had rarely deserted him; his unselfishness and his meekness of disposition were two prominent qualities which, together with his clear, prophetic vision, eminently fitted him to be the instrument of the Deity. Free from jealousy, he wished that all Israelites might be prophets like himself, and that God would endue them with his spirit. Moses became at a subsequent epoch the unattainable ideal of a prophet.

Moses ben Nachman (mō'zez ben näch'män): called, after the initials of his name, **Ramban.** Born 1200: died 1272. A Jewish scholar and writer of Gerona, northern Spain. He wrote a commentary on the Pentateuch, and many Talmudical treatises, and also several poems. His writings exhibit the clear and erudite thinker, but also his inclination to mysticism. In 1263 King James I. of Aragon, at the instigation of the Dominican superior Raimundo de Peñaforte, ordered Moses to engage in a religious disputation with the Dominican Fra Pablo. Soon afterward Moses emigrated to Palestine, where he remained until the end of his life.

Mosquitia (mōs-kē-tē'ä), or **Mosquito** (mos-kē'tō) **Coast.** The region occupied by the Mosquitos. At present the name is restricted to a strip on the east coast of Nicaragua, from lat. 11° 30′ N. northward, comprising probably less than 7,000 square miles. The English settled here about 1660, and their rights were recognized by Spain in 1670. Great Britain recognized the Mosquito king and established a protectorate over the country; but endless quarrels with Spain resulted in the cession of the British rights in exchange for Balize, to which the colonists were transferred (1786). The Spaniards were driven out by the natives; later Great Britain resumed a nominal protectorate, which led to quarrels with Nicaragua (1840–48). By the Bulwer-Clayton treaty, signed at Washington April 19, 1850, and by a subsequent treaty with Honduras, Great Britain resigned all claim to Mosquitia. The country is now a department of Nicaragua, but the Mosquitos obey their own king. They are essentially in a savage condition.

The Mosquitos first became prominent in the latter part of the 17th century, when their coast was visited by bucaneers. At that time they were a savage and warlike race, using bows, lances, and clubs in battle, and capable, it is said, of mustering 40,000 warriors. They were governed by hereditary chiefs or kings. At present (1895) the Mosquitos probably number less than 10,000. See *Mosquitia*.

Mother Goose. A name famous in nursery literature through the familiar jingles of "Mother Goose's Melodies." It is said that it was a Mrs. Goose, mother-in-law of Thomas Fleet, a printer of Boston (Mass.) publisher, and that he issued the collection under this title to avenge himself for her persistent singing of melodious chanting of these ditties to his infant son. The earliest known edition bears the title "Songs for the Nursery, or Mother Goose's Melodies for Children: printed by T. Fleet at his printing house, Pudding Lane, 1719," price "two coppers." This, however, has been discredited. W. Wells Newell, who says Perrault published "Contes de ma mère l'oye" in 1697; but the name was quoted by the satirist Régnier more than a century before. Queen Pédauque (Reine Pédance), or Bertha with the great foot or Bertha foot, appears as synonymous with Mother Goose in French tales. Moyen de Parvenir (mwä-yan' dė pärv-nēr'). [F., 'how to succeed.'] See the extract.

Much later (1610) the last—it may almost be said the first—echo of the genuine spirit of Rabelais was sounded in the "Moyen de Parvenir" of Béroalde de Verville. This eccentric work is perhaps the most perfect example of a *fatrasie* in existence. In the guise of guests at a banquet the author brings in many celebrated persons of the day and of antiquity, and makes them talk from pillar to post in the strangest possible fashion. The licence of language and anecdote which Rabelais had permitted himself is equalled and exceeded; but many of the tales are told with consummate art, and in the midst of the ribaldry and buffoonery remarks of no small shrewdness are constantly dropped as if by accident. *Saintsbury*, French Lit., p. 193.

Moytura. See the extract.

Many battles took place between these Danaans and the earlier Firbolgic settlers—the native owners, as no doubt they felt themselves, of the country. One of the best substantiated of these, not, indeed, by history or even tradition, but by a more solid testimony, that of the stone remains left on the spot, prove, at any rate, that *some* long-sustained battle was at some remote period fought on the spot [*sic*]. This is the famous pre-historic battle of Moytura, rather the Southern Moytura, for there were two; the other, situated not far from the present town of Sligo, retaining "the largest collection of pre-historic remains," says Dr. Petrie, "in any region of the world with the exception of Carnac." This second battle of Moytura was fought upon the plain of Cong, which is washed by the waters of Lough Mask and Lough Corrib, close to where the long monotonous midland plain of Ireland becomes broken, changes into that region of high mountains and low-lying valleys now called Connemara, but which in earlier days was always known as Iar Connaught.

Mozart (mōʹzärt; G. pron. mōʹtsärt), **Leopold.** Born at Augsburg, Bavaria, Nov. 14, 1719: died at Salzburg, May 28, 1787. A German violinist and musical writer.

Mozart, Wolfgang Amadeus. Born at Salzburg, Austria, Jan. 27, 1756: died at Vienna, Dec. 5, 1791. A celebrated Austrian composer, son of Leopold Mozart. He showed a precocious knowledge of music when only three years old, and first appeared in public in a performance at the University of Salzburg, in 1761, when between five and six years of age. In 1762 his father took him with his sister Marianne on a concert tour to Munich, Vienna, and other places, and in the next year to Paris, where they, especially Wolfgang, excited great enthusiasm. At London in the next year they were equally successful, and remained in England till Aug., 1765. Mozart during this time composed a number of symphonies, sonatas, and the overtures for two of his concerts: they also played at their lodgings for such as chose to test their genius in private. They finally arrived at Salzburg again in Nov., 1766, and in 1768 were received at court in Vienna, where Mozart was urged by the emperor to compose an opera and conduct it. He took the story of "La Finta Semplice," and his opera (though opposed by the envy of other musicians) was finally performed at Salzburg. He succeeded in producing his "Bastien und Bastienne" in a private theater at Vienna, and he also composed and conducted the music at the ceremonies of the consecration of the new church at Waisenhaus. From 1769 to 1771 they traveled in Italy, Mozart winning fresh laurels. In 1777 he went to Paris with his mother, where he found that the admiration accorded to a precocious child was not so easily obtained by a mature musician. After the death of his mother he returned to Salzburg, and in 1781 to Vienna, where he lived with the archbishop. He reaped but little pecuniary benefit from his compositions, and his health began to fail. In 1791 he wrote his three greatest symphonies and the "Magic Flute," and in this year received the famous commission from a mysterious stranger (afterward known to be the steward of Count Walsegg) to write a requiem mass to be finished within a month. His enfeebled health and various circumstances connected with the commission produced a serious effect on his already troubled brain, and he imagined it to be a summons from the other world. He began the mass, however, and said that it was for his own funeral. As he was already dying, he was not able to supervise the rehearsal of the finished part. He died of malignant typhus fever. There were no ceremonies at his grave, and even his friends followed him no farther than the city gates, owing to a violent storm. He was buried in the common ground of St. Marx, and the exact position of his grave is not known. Many years after a monument was erected to him by the city of Vienna. He left over six hundred compositions, which include more than forty symphonies, a number of masses (mostly composed in his youth), sonatas, quartets, "The Requiem," etc. Among his operas are "Idomeneo" (1781), "Mitridate," "La Finta Giardiniera," "Zaide," "Die Entführung aus dem Serail" (1782), "Le Nozze di Figaro" ("The Marriage of Figaro," 1786), "Don Giovanni" (1787), "Così fan tutte" (1790), "La Clemenza di Tito" (1791), "Die Zauberflote" ("The Magic Flute" 1791), etc. Very little of his music was published in his lifetime.

Mrichchhakatika (mrch-ch-ha-kaʹti-kä). [Skt. *mṛid*, clay, and *shakatikā*, a small cart.] "The Little Clay Cart," a Sanskrit drama. It is a work of remarkable power, comparable to the best modern comedies in plot, incident, character delineation, and felicity of diction, and extraordinary in its minute directions to the actors and its various scenic artifices. It has been supposed to have been written in the 1st or 2d century, but Von Schröder puts it in the 5th or 6th. Its authorship is ascribed in flattery to a king Shudraka, who is praised in the prologue. Pischel, after assigning it earlier to Bhasa, believes its real author to have been Dandin. The hero is Charudatta, a virtuous Brahman, reduced to poverty by his generosity; the heroine, Vasantasena, a beautiful and wealthy hetaira, who loves him and repulses the king's brother-in-law, Samsthanaka. Vasantasena is purified and ennobled by her affection, and at last weds Charudatta. "The little clay cart" or "toy cart," from which the name comes, is a plaything of the little son of Charudatta. Visiting Charudatta at his house, Vasantasena finds his child crying because his toy cart is of clay while the cart of a neighbor's child is of gold. Vasantasena fills the boy's cart with her jewels, and tells him to have a gold cart made from these. The Mrichchhakatika has been translated into English by Wilson, into German by both Böhtlingk and Fritze, into French by Regnaud, into Danish by Brandes, and into Russian by Kossowitsch. A full account of the play is given in Von Schröder's "Indien's Literatur und Cultur: Vorlesung 43."

The story of Hero is taken with some variations from one of Bandello's tales, which probably was borrowed from the story of Geneura and Ariodantes in the "Orlando Furioso" of Ariosto. This part of the play, however, is subordinated by Shakspere to the loves of Benedick and Beatrice.

Muspilli. [OHG. *Muspilli*, OS. *Mudspelli*, *Mutspelli*, the end of the world, Icel. *Muspell*, an abode of fire (see *Muspellsheim*); of uncertain origin, but usually explained as from OHG. *molta*, AS. *molde*, etc., earth (E. *mould*), and **spiltian*, OS. *spildian*, AS. *spillan*, destroy (E. *spill*).] A fragmentary Old High German poem on the end of the world, of unknown authorship, written in alliterative verse. It exists in a single manuscript, from about the year 900, in the Bavarian dialect.

"Muspilli" belongs to a time when myths of the old heathen mythology blended with the faith of the new converts to Christianity. Muspel, in Scandinavian mythology, was a great world of fire that at the end would break out and devour the earth and all that was upon it. "Muspilli" therefore served to express the final conflagration of the world; and that is the subject of this fragment, which shows also an adaptation of pre-Christian to Christian ideas in the fight of Elias with Antichrist, which may answer to the contest between Thor and Surtur.

His father, Musset-Pathay, was a man of letters, and encouraged in his children the love of letters. Alfred de Musset graduated with high honors from the Collège Henri IV. in Paris, and had just completed his twentieth year when he published his first volume of poetry, "Contes d'Espagne et d'Italie" (1829). Two more collections of poems established his fame—"Poésies diverses" (1831) and "Le spectacle dans un fauteuil" (1832). In 1833 he went to Italy with George Sand; but, after an extended trip, fell out with her at Venice, and returned to France alone. His morbid state of mind finds expression in the "Confession d'un enfant du siecle" (1836). During these years (1833–37) De Musset contributed a number of short plays to the "Revue des Deux Mondes": they have appeared since then as "Comédies et proverbes" (1840). Short stories from the same magazine (1837–39) were also reprinted in book form (1840). In the same year (1840) appeared the first edition of the "Poésies nouvelles." One of his last publications is a volume of "Contes" (1854). He was received in the French Academy in 1852. Mycenæ (mī-sē′nē). [Gr. *Μυκῆναι.*] In ancient geography, a city of Argolis, Greece, 14 miles south-southwest of Corinth. It is a very ancient settlement, conspicuous in Greek mythology, and supplying some of the oldest materials for the study of Greek architecture and art. It consisted of the acropolis, occupying the apex of a hill, and the lower town, whose confused ruins are spread over its slopes. The acropolis is triangular, and is surrounded by a massive wall of huge stones, partly shaped. It is entered by the Gate of the Lions. This gate is at the end of a walled passage. The opening is about 10 feet wide and high, tapering toward the top, with monolithic jambs and a huge lintel. Above the lintel a large triangular opening is formed by corbeling, and the great slab, 2 feet thick, which fills this bears the remarkable relief of two affronted rampant lions separated by a column. Close inside of this gate, in a double circle of upright stones 80 feet in diameter, were found the tombs containing golden ornaments and masks, inlaid sword-blades, and other objects whose discovery astonished the scientific world. More recent excavations have disclosed on the acropolis a prehistoric palace resembling that at Tiryns. The most important monuments of the lower town are the great "beehive" tombs commonly called treasuries. Of these the so-called treasury of Atreus is a typical example. The interior is a circle about 50 feet in diameter and the same in height, covered with a pseudo-dome formed by corbeling in the horizontal courses of the wall. A door opens into a square side chamber. The entrance to the tomb is by an inclined passage or dromos, over 30 feet long, leading to a door 19½ feet high, which is spanned by an enormous lintel. Over the lintel there is a large triangular opening, which was originally filled with a sculptured slab. The original fruitful excavations were made by Schliemann in 1876–77, and much work has since been done on the site by the Archæological Society of Athens. The discoveries at Mycenæ threw a flood of light upon the earliest Greek art, particularly in the department of pottery. They were the first important finds of their class, which has since been recognized in a large proportion of Greek settlements of sufficient age, and is everywhere distinguished as Mycenæan. Mycenæan ornament includes geometric decoration, foliage, marine and animal forms, and the human figure. It may be dated back to the 12th century B. C., and follows in time the art of the "Homeric city" at Hissarlik, which is without painted decoration, and that of Thera. Mycenæan art was practised and developed through several centuries, and existed contemporaneously with the succeeding dipylon style of decoration, which began about 1000 B. C. The chief objects found at Mycenæ are in a museum at Athens.

The Myrina figurines are for the most part of the Hellenistic epoch, and in treatment and composition are akin to those of Tanagra, though in general less severe in style. Many examples show remarkable grace, and the average size is larger than that of the Tanagra figurines. Groups and combinations of figures are frequent. Like the sculptors of the Doric or Argive school, his main interest was centered in the athlete. He considered the subject, however, more from the standpoint of action than of proportion. He represents the attitudes of the active rather than the beauty of the passive athlete. In this he was considered supreme throughout antiquity. His most representative work was probably the Discobolus described by Quintilian and Lucian. Of this statue the most perfect replica is in the possession of Prince Lancelotti in Rome; another is in the Vatican, and another in the British Museum. His group of Athene and Marsyas is represented by the Marsyas of the Lateran. Myron's bronze cow on the Pnyx at Athens was one of the favorites of the Greek and Roman world.

Nachiketas prayed to see his father again and be reconciled. Nahuas (nä'wäs), or **Nahuatlecas** (nä-wät-lā'käs). A collective name for the Indian tribes which formed the dominant race of the Mexican plateau at the time of the Spanish conquest. According to the most generally credited traditions, they had come from the north or northwest some centuries before. They were divided into many petty tribes, each with its pueblo or town, and these were often at war with each other. Clustered in and about the lakes of the valley of Mexico were the pueblos of Tenochtitlan or Mexico, Tezcuco, Chalco, Tlacopan (whose inhabitants were called Tecpanecs), and Xochimilco. The Tlascalans occupied a mountainous region, and Cholula, Cuernavaca, and other pueblos were scattered over the plateau. The Nahuatl language was commonly spoken over a large area, and tended to drive out other tongues. During the 14th and 15th centuries Tenochtitlan, Tezcuco, and Tlacopan became allies: the dominant member of the league was at first Tezcuco, later Tenochtitlan. The confederate arms spread over the valley of Mexico, and were carried to the Gulf, the Pacific, and Guatemala: but within this region many tribes were unconquered, and some conquests were only temporary. Opinions differ as to the true status of the conquered regions, but the tendency is to reject the idea of an Aztec "empire." It appears that most of the pueblos and tribes acknowledged in some sort the power of Mexico, and paid tribute to it, but without being in absolute subjection. All the Nahuas built large towns, cultivated the ground, were skilful in gold- and feather-work, etc., and used hieroglyphic writing in books and accounts; they were also enterprising traders: but they were no more advanced in civilization than the Maya races to the southeast, and their civil polity was far inferior to that of the Peruvians. Their religion was degraded by revolting human sacrifices, and it appears that most of their numerous wars were waged to obtain victims for their gods. After the fall of Tenochtitlan or Mexico (1521), they made little resistance to the Spaniards, and soon sank into a condition of semi-slavery. About 2,000,000 Indians of the Mexican plateau are now classed as Nahuas. The name *Aztecs* is sometimes used for all the Nahua tribes; more commonly it is restricted to those which formed the above-mentioned league, or to that of Tenochtitlan alone. See *Aztecas*, *Mexico*, and *Nahuatlecan stock*.

Nahuatl (nä'wätl), or **Nahua** (nä'wä). The language of the Nahuas, commonly called Aztec. It was divided into various dialects differing but slightly from each other. He was appointed curator in the Natural History Museum at Bergen, Norway, in 1882, after having made in the same year a voyage to the Jan Mayen and Spitzbergen seas, and the sea between Iceland and Greenland, in a sealing-ship, for the purpose of observing animal life in high latitudes. He took his degree at the university in 1888, crossed southern Greenland from east to west on snowshoes in 1888, and was appointed curator of the Museum of Comparative Anatomy at the University of Christiania in 1889. He sailed from Christiania in June, 1893, at the head of an arctic expedition, intending to drift in a specially constructed vessel, the Fram, from the Siberian coast, across the north pole, to the coast of Greenland. He returned in 1896, having reached with sledges lat. 86° 14′ N., 2° 50′ further than Lockwood's furthest. In 1905 he was appointed minister and later ambassador at the Court of St. James. He has written "Farthest North" (1897).

Naples (nā'plz). A province of Italy. Area, 350 square miles. Population (1891), 1,104,665.

Naples, It. **Napoli** (nä'pō-lē). [L. *Neapolis,* Gr. *Νεάπολις,* the new city; F. *Naples,* G. *Neapel.*] The capital of the province of Naples, Italy, situated on the north side of the Bay of Naples, in lat. 40° 52′ N., long. 14° 15′ E. It has one of the most beautiful situations in Europe, and is the largest city and one of the principal seaports in Italy. The Castel del Ovo, a landmark of Naples, so named from its oval plan, founded in 1154 on a small island connected with the shore by a causeway, was considered a marvel of strength in the 13th century. It now serves as a military prison. The cathedral was begun by Charles of Anjou in 1272, and retains many 13th-century features despite repeated restorations made necessary by earthquakes. It contains many granite columns and marbles from the Roman temples of Neptune and Apollo, besides fine paintings and historic tombs. The chapels are of great richness, particularly that of St. Januarius (1608), where the miraculous blood is preserved. The Pointed canopy of the episcopal throne, with spiral columns, has high artistic value. The votive church of San Francesco di Paola, begun in 1817 by Ferdinand I., is a partial imitation of the Pantheon at Rome. Its interior is incrusted with precious marbles, and the dome is 175 feet high. San Martino, the Certosa, or Carthusian Monastery, is remarkable as possessing one of the most lavishly ornamented interiors in existence: the piers and walls are incrusted with precious marbles forming panels and patterns, and the vault is frescoed by Lanfranco, Spagnoletto, and others. The floor is a mosaic of polished wood, and was made by one of the monks. Other objects of interest are the university, royal palace, San Carlo theater, Castel Nuovo, triumphal arch, Palazzo di Capodimonte, observatory, national museum (picture-gallery and collection of antiquities), Villa Nazionale, aquarium, Castel Sant' Elmo, library, conservatory of music, and the churches (besides those noticed above) of Santa Maria del Carmine, San Gennaro (catacombs), Incoronata, Monte Oliveto, Santa Chiara, San Domenico, San Giovanni, San Paolo, and San Lorenzo. Near the city are many noted points, including Posilipo, Cumæ, Lake Avernus, Pozzuoli, Baiæ, Misenum, Mount Vesuvius, Pompeii, Herculaneum, Capri, and Ischia. Naples was a Greek colony from Cumæ; became subject to Rome about 300 B. C.; flourished under Roman rule; suffered in the barbarian invasions; was taken by Belisarius in 536, and by Totila in 543; became the capital of a duchy; was taken by the Normans in 1150; was the capital of the kingdom of Naples and of the Two Sicilies; was the scene of a revolt under Masaniello in 1647; and has been the scene of various revolutionary outbreaks, as in 1848. Pop. (1901), commune, 563,540.

Naples, Bay of. An arm of the Mediterranean, on the coast of Campania, Italy, celebrated for the beauty of its shores.

Naples, Duchy of. A duchy founded in the 6th century, dependent on the Byzantine empire. It became independent in the beginning of the 8th century, and was conquered by the Normans in the 11th and 12th centuries.

Naples, Kingdom of. A former kingdom in southern Italy. It was separated from the kingdom of Sicily under Charles of Anjou in 1282; was united with Aragon 1442–58; was conquered temporarily by Charles VIII. of France in 1495; and was under the rule of Spain 1503–1707, and of Austria 1707–35. See *Two Sicilies.*

Napo (nä'pō). A river in Ecuador, a northern tributary of the Amazon. Length, estimated, about 700 miles.

Napoleon (nạ-pō'lē-on; F. pron. nä-pō-lā-ôṅ') **I. (Napoléon Bonaparte** or **Buonaparte**[1]). Born at Ajaccio, Corsica, Aug. 15, 1769, or, according to some, at Corte, Jan. 7, 1768[2]: died at Longwood, St. Helena, May 5, 1821. Emperor of the French 1804–14. He was the son of Charles Marie Bonaparte and Lætitia Ramolino; studied at the military school of Brienne 1779–84, and at that of Paris 1784–85; and received a lieutenant's commission in the French army in 1785. He opposed the patriot movement under Paoli in Corsica in 1793; commanded the artillery in the attack on Toulon in the same year; served in the army in Italy in 1794; and, as second in command to Barras, subdued the revolt of the sections at Paris in Oct., 1795. He married Josephine de Beauharnais March 9, 1796. Toward the close of this month (March 27) he assumed command at Nice of the army in Italy, which he found opposed by the Austrians and the Sardinians. He began his campaign April 10, and, after defeating the Austrians at Montenotte (April 12), Millesimo (April 14), and Dego (April 15), turned (April 15) against the Sardinians, whom he defeated at Ceva (April 20) and Mondovi (April 22), forcing them to sign the separate convention of Cherasco (April 29). In the following month he began an invasion of Lombardy, and by a brilliant series of victories, including those of Lodi (May 10) and Arcole (Nov. 15–17), expelled the Austrians from their possessions in the north of Italy, receiving the capitulation of Mantua, their last stronghold, Feb. 2, 1797. Crossing the Alps, he penetrated Styria as far as Leoben, where he dictated preliminaries of peace April 18. The definitive peace of Campo-Formio followed (Oct. 17). By the treaty of Campo-Formio northern Italy was reconstructed in the interest of France, which furthermore acquired the Austrian Netherlands, and received a guarantee of the left bank of the Rhine. Campo-Formio destroyed the coalition against France, and put an end to the Revolutionary war on the Continent. The only enemy that remained to France was England. At the instance of Bonaparte the Directory adopted the plan of attacking the English in India, which involved the conquest of Egypt. Placed at the head of an expedition of about 35,000 men, he set sail from Toulon May 19, 1798; occupied Malta June 12; disembarked at Alexandria July 2; and defeated the Mamelukes in the decisive battle of the Pyramids July 21. He was master of Egypt, but the destruction of his fleet by Nelson in the battle of the Nile (Aug. 1) cut him off from France and doomed his expedition to failure. Nevertheless he undertook the subjugation of Syria, and stormed Jaffa March 7, 1799. Repulsed at Acre, the defense of which was supported by the English, he commenced a retreat to Egypt May 21. He inflicted a final defeat on the Turks at Abukir July 25; transferred the command in Egypt to Kléber Aug. 22; and, setting sail with two frigates, arrived in the harbor of Fréjus Oct. 9. During his absence a new coalition had been formed against France, and the Directory saw its armies defeated both on the Rhine and in Italy. With the assistance of his brother Lucien and of Sieyès and Roger Ducos, he executed the coup d'état of Brumaire, whereby he abolished the Directory and virtually made himself monarch under the title of first consul, holding office for a term of 10 years. He crossed the Great St. Bernard in May, 1800, and restored the French ascendancy in Italy by the victory of Marengo (June 14), which, with that won by Moreau at Hohenlinden (Dec. 3), brought about the peace of Lunéville (Feb. 9, 1801). The treaty of Lunéville, which was based on that of Campo-Formio, destroyed the coalition, and restored peace on the Continent. He concluded the peace of Amiens with England March 27, 1802. After the peace of Lunéville he commenced the legislative reconstruction of France, the public institutions of which had been either destroyed or thrown into confusion during the Revolution. To this period belong the restoration of the Roman Catholic Church by the Concordat (concluded July 15, 1801), the restoration of higher education by the erection of the new university (May 1, 1802), and the establishment of the Legion of Honor (May 19, 1802): preparation had been previously made for the codification of the laws. He was made consul for life Aug. 2, 1802; executed the Duc d'Enghien March 21, 1804; was proclaimed hereditary emperor of the French May 18, 1804 (the coronation ceremony took place Dec. 2, 1804); and was crowned king of Italy May 26, 1805. In the meantime England had been provoked into declaring war (May 18, 1803), and a coalition consisting of England, Russia, Austria, and Sweden was formed against France in 1805: Spain was allied with France. The victory of Nelson at the battle of Trafalgar (Oct. 21, 1805) followed the failure of the projected invasion of England. Breaking up his camp at Boulogne, he invaded Austria, occupied Vienna, and (Dec. 2, 1805) defeated the allied Russians and Austrians at Austerlitz. The Russians retired from the contest under a military convention; the Austrians signed the peace of Presburg (Dec. 26, 1805); and the coalition was destroyed. His intervention in Germany brought about the erection of the Confederation of the Rhine July 12, 1806. This confederation, which was placed under his protection, ultimately embraced nearly all the states of Germany except Austria and Prussia. Its erection, together with other provocation, caused Prussia to mobilize its army in Aug., and Napoleon presently found himself opposed by a coalition with Prussia, Russia, and England as its principal members. He crushed the Prussian army at Jena and Auerstädt Oct. 14; entered Berlin Oct. 27; fought the Russians and Prussians in the drawn battle of Eylau Feb. 7–8, 1807; defeated the Russians at the battle of Friedland June 14; and compelled both Russia and Prussia to conclude peace at Tilsit July 7 and 9, 1807, respectively. Russia became the ally of France; Prussia was deprived of nearly half her territory. Napoleon was now, perhaps, at the height of his power. The imperial title was no empty form. He was the head of a great confederacy of states. He had surrounded the imperial throne with subordinate thrones occupied by members of his own family. His stepson Eugène de Beauharnais was viceroy of the kingdom of Italy in northern and central Italy; his brother Joseph was king of Naples in southern Italy; his brother Louis was king of Holland; his brother Jerome was king of Westphalia; his brother-in-law Murat was grand duke of Berg. [1] The spelling *Buonaparte* was used by Napoleon's father, and by Napoleon himself down to 1796, although the spelling *Bonaparte* occurs in early Italian documents.

[2] Aug. 15, 1769, is the commonly accepted date of Napoleon's birth, and Jan. 7, 1768, that of the birth of his brother Joseph. It has been said, but without good reason, that these dates were interchanged at the time of Napoleon's admission to the military school of Brienne in 1779, no candidate being eligible after 10 years of age.

Its precise age is doubtful, and it would be unsafe to regard it as the type of a special race, since its characteristics . . . have been occasionally reproduced in modern times. *Taylor*, Aryans, p. 106.

ring the reign of Ahmed III. (1703–1730) flourished m, the greatest of all the poets of the old Ottoman ol. Nedîm has a style that is entirely his own: it is ether unlike that of any of his predecessors, whether ian or Turkish, and no one has ever attempted to it. Through his ghazels, which are written with the finished elegance in words of the truest harmony, a tone of sprightly gaiety and joyous lightheartedness such as is not to be found in any other poet of his n. His numerous kasidas, while they are more eful, are hardly less brilliant than those of Nefî, and t the same time in truer taste and less burdened with ure and far-fetched conceits. Little is known re- ing his life, save that he resided at Constantinople, e the Grand Vezir, Ibrâhim Pasha, appointed him odian of the library which he had founded, and that as still alive in 1727. *Poole*, Story of Turkey, p. 318.

Nefi (nef'ē). See the extract.

During the reign of Ahmed I. (1603–1607), arose the second great light of old Turkish poetry. This was Nefî of Erzerûm, who is as much esteemed for the brilliancy of his kasîdas, or eulogies, as Fuzûli is for the tenderness of his ghazels. Like him, he elaborated a style for himself, which found many imitators, the most successful of whom was Sabri. Unfortunately for himself, Nefî was an able satirist: his scathing pen drew down upon him the enmity of certain great men, who prevailed upon Sultan Murâd IV. to sanction his execution (1635). *Poole*, Story of Turkey, p. 315.

Negro race. A race of which the physical characteristics are a large and strong skeleton, long and thick skull, prognathic jaws, skin from dark brown to black, woolly hair, thick lips, and a broad and flattened nose. It occupies in a compact mass the African continent south of the Sahara. The brown races of South Africa, the pygmies of central Africa, and the red-brown races of Sudan, who live in the same area, are comparatively few in number, or are intimately mixed with the negro race. There is no racial difference between the Bantu, speaking languages derived from one mother tongue, and the negroes of Upper Guinea and the Sudan, who speak unconnected languages; nor is there much difference in customs. The non-Bantu languages of the Upper Guinea and Sudan negroes are called, in this work, the Nigritic branch, and this word is also applied to the tribes. The negroes of North, Central, and South America have been deported from Africa. The Papuans and Nigritos of Australasia, having all or most of the characteristics of the African negroes, are classed by some with these, by some apart. Nehemiah, Book of. A book of the Old Testament, written probably in part by Nehemiah. See the extract.

The book of Nehemiah, or, as we have now learned to call it, in accordance with the Hebrew usage, the joint book of Ezra and Nehemiah, which in all probability was also one book with Chronicles, carries down the list of high priests as far as Jaddua, who was in office at the time of Alexander (Neh. xii. 11). The book, therefore, was written, at the earliest, at the very end of the Persian period, though it incorporates earlier documents, such as the autobiography of Ezra and the memoir of Nehemiah. *W. At the declaration of war with France in 1793, he was made captain of the Agamemnon in the Mediterranean, serving first under Lord Hood and afterward under Admiral Hotham. On Feb. 14, 1797, under Admiral Jervis (later Lord St. Vincent), he fought in the battle off Cape St. Vincent. In May, 1798, he was sent by Lord St. Vincent to intercept Napoleon's expedition to Egypt. In this he failed, but destroyed the French fleet at anchor in the harbor of Abukir, Aug. 1–2. This engagement is called "the battle of the Nile." He retired to Naples, where he became involved in political complications and in an intrigue with the wife of Sir William Hamilton, British envoy to Naples. In 1800 he returned to England and was made vice-admiral and a peer. The battle of Copenhagen was fought April 2, 1801, in order to destroy the coalition of the northern powers known as the (second) Armed Neutrality. Nelson was made a viscount after Copenhagen. The French fleet under Admiral Villeneuve left Toulon in March, 1805, and sailed to the West Indies with the intention of drawing off the English fleet and returning to support Napoleon's projected invasion of England. Nelson followed, and, after Napoleon's plan had been thwarted by the hesitancy of Villeneuve, fought the French-Spanish fleet off Cape Trafalgar, Oct. 21, 1805. According to the mythological story, the games were instituted in memory of the death of the young hero Archemorus or Opheltes by the bite of a serpent, as the expedition of "the Seven against Thebes" was passing through the place. Nemesianus (nē″me-si-ā′nus), **Marcus Aurelius Olympius.** Born probably at Carthage: lived at the close of the 3d century. A Roman poet. Fragments of his "Cynegetica" have been edited by Haupt (1838).

In the time of Carus and his sons, M. Aurelius Olympius Nemesianus of Carthage wrote his didactic poem on the chase (Cynegetica), the first 325 lines of which have come down to us. They exhibit fluency, ease, and command of language in the traditional style, the technique being in the main the same as in the four wordy eclogues by this author, in which he has taken as his pattern Calpurnius's bucolic essay, but proves considerably inferior even to this very mediocre model.

> The old colonel is ruined by speculation, and in his ruin is brought to accept the alms of the brotherhood of the Grey Friars. . . . The description is perhaps as fine as anything that Thackeray ever did. The gentleman is still the gentleman, with all the pride of gentry; but not the less is he the humble bedesman, aware that he is living upon charity, not made to grovel by any sense of shame, but knowing that, though his normal pride may be left to him, an outward demeanour of humility is befitting. And then he dies. "At the usual evening hour the chapel bell began to toll, and Thomas Newcome's hands outside the bed feebly beat time — and just as the last bell struck, a peculiar sweet smile shone over his face, and he lifted up his head a little, and quickly said, 'Adsum'— and fell back. It was the word we used at school when names were called; and, lo, he whose heart was as that of a little child had answered to his name, and stood in the presence of The Master!" *Trollope,* Thackeray.

New Spain (spān), Sp. **Nueva España** (nō-ā'-vȧ es-pän'yȧ). The colonial name of the country now called Mexico. It was first applied by Grijalva (1518) to Yucatan and Tabasco, and was extended by Cortés to all his conquests. Under the viceroys the name was also used for a much larger territory (see *New Spain, Viceroyalty of*), but New Spain proper, or the kingdom of New Spain, corresponded to the district under the jurisdiction of the audience of Mexico, the present southern Mexico, embracing (nearly) the modern states of Yucatan, Campeche, Tabasco, Vera Cruz, Hidalgo, Guanajuato, Michoacan, Colima, Mexico, Morelos, Tlaxcala, Puebla, Guerrero, and Oajaca.

New Spain, Viceroyalty of. The region governed by the viceroys of Mexico. The first viceroy, Mendoza, took possession in 1535. Under him, and for some time after, the viceroyalty, in its broadest sense, embraced all the Spanish possessions in Central and North America, from the southern boundary of Costa Rica, besides the West Indies and the Spanish East Indies — that is, the five audiences of Mexico, Guadalajara, Confines, Santo Domingo, and Manila, and the captaincy-general of Florida. But, except in the first two, the viceroy's powers were very limited, and were soon practically restricted to military defense and a few other matters of general importance. During the 18th century the East Indies and Guatemala or Central America were completely separated. The region generally called New Spain, in which the viceroy had complete authority, consisted for a long time of the three kingdoms of New Spain, New Galicia, and New Leon, corresponding to modern Mexico and the undefined territories of New Mexico, Texas, and California, now included in the United States. In 1793 the northern provinces were separated (see *Provincias Internas*), and thereafter the viceroyalty corresponded nearly to the Mexico of to-day, excluding southern Coahuila, Durango, Sinaloa, Chihuahua, and Sonora, but including Upper and Lower California. The name Mexico finally supplanted that of New Spain in 1822.

In 1860 he was appointed British consul at Rome, and from 1861 to 1885 was keeper of Greek and Roman antiquities at the British Museum. In 1880 he was appointed professor of archæology at University College, London. He wrote "A History of Discoveries at Halicarnassus, Cnidus, and Branchidæ" (1862), "Travels and Discoveries in the Levant" (1865), essays on art and archæology (1880), etc., and translated Panofka's "Manners and Customs of the Greeks" from the German in 1849.

Newton, Sir Isaac. Born at Woolsthorpe, near Grantham, Lincolnshire, Dec. 25, 1642 (O. S.): died at Kensington, March 20, 1727. A famous English mathematician and natural philosopher. His father, Isaac Newton, was a small freehold farmer. He matriculated at Cambridge (Trinity College) July 8, 1661; was elected to a scholarship April 28, 1664; and graduated in Jan., 1665. At the university he was especially attracted by the study of Descartes's geometry. The method of fluxions is supposed to have first occurred to him in 1665. He was made a fellow of Trinity in 1667, and Lucasian professor at Cambridge in Oct., 1669. He became a fellow of the Royal Society in Jan., 1672. Newton's attention was probably drawn to the subject of gravitation as early as 1665. The story of the fall of the apple was first told by Voltaire, who had it from Mrs. Conduitt, Newton's niece. Kepler had established the laws of the planetary orbits, and from these laws Newton proved that the attraction of the sun upon the planets varies inversely as the squares of their distances. Measuring the actual deflection of the moon's orbit from its tangent, he found it to be identical with the deflection which would be created by the attraction of the earth, diminishing in the ratio of the inverse square of the distance. The hypothesis that the same force acted in each case was thus confirmed. The success of Newton's work really depended on the determination of the length of a degree on the earth's surface by Picard in 1671. The universal law of gravitation was completely elaborated by 1685. The first book of the "Principia" or "Philosophiæ Naturalis Principia Mathematica" was presented to the Royal Society, April 28, 1686, and the entire work was published in 1687. In 1689 he sat in Parliament for the University of Cambridge, and at this time was associated with John Locke; in 1701 he was reëlected. When his friend Charles Montagu (afterward earl of Halifax) was appointed chancellor of the exchequer, Newton was made warden of the mint, and in 1699 master of the mint. The reformation of English coinage was largely his work. The method of fluxions, which he had discovered, was employed in the calculations for the "Principia," but did not appear until 1693, when it was published by Wallis. It also appeared in 1704 in the first edition of the "Optics." On Feb. 21, 1699, he was elected foreign associate of the French Academy of Sciences. In 1703 he was elected president of the Royal Society, and held the office till his death.

Nibelungenlied (nē'be-löng-en-lēd). [G., 'Song of the Nibelungs.'] A Middle High German epic poem, written in its present form by an unknown author in South Germany in the first half of the 13th century. The legends, however, are much earlier, having been handed down orally. Its hero, Siegfried, is a mythical prince and later king of Niderland (the region about Xanten on the lower Rhine), who possessed the so-called "hoard of the Nibelungs," won by him in Norway. He wooed Brunhild, a princess of Island, for the Burgundian king Gunther, whose sister, Kriemhild, became his wife. He was afterward treacherously slain, and the hoard was ultimately sunk in the Rhine. The Nibelungenlied is the greatest monument of early German literature. Historical and mythical elements are mingled in it. Wagner's "Ring of the Nibelungs" has taken little except names from the German epic. The source of his material is the Old Norse version of the legend contained in the Volsunga Saga and the Edda. See *Ring des Nibelungen.*

Nibelungs (nē'be-löngz), **The,** G. **Nibelungen** (nē'be-löng-en). In German legend, originally a race of Northern dwarfs, so called from their king Nibelung; then applied to the followers of Siegfried (the conquerors of the hoard of the Nibelungs); later identified with the Burgundians.

D., and of the seventh in 787; and was taken by the Crusaders in 1097, and by the Turks in 1330.

Nicander (nē-kän'der), **Karl August.** Born at Strengnäs, Sweden, March 20, 1799: died Feb. 7, 1839. A Swedish poet. The death of his father while he was a child left him without means, and in early life he was a tutor. His first important work was the dramatic poem "Runesvärdet" (1821), whose motive is the conflict between heathenism and Christianity. Two poems, "Tassos död" ("The Death of Tasso") and "Konung Enzio" ("King Enzio"), the former of which won the prize of the Swedish Academy, were on Italian subjects. He was now (1827) enabled to undertake a journey to Rome, which, however, ended disastrously in that he was left, without means, to make his way home as best he could. Subsequently he was given a subordinate position in the public service, and made some translations for the royal theater. "Minnen från Södern" ("Reminiscences of the South"), a description of his travels, appeared in 1831. This was followed by "Hesperiden" ("The Hesperides"), a volume of poems and tales. His last work was the poem "Lejonet i Öknen" ("The Lion in the Wilderness"), a eulogy of Napoleon. His life to within a few years of his death, when his literary work at last yielded him an income sufficient for his needs, was almost a constant struggle with want. His collected works appeared at Stockholm in 1877, in 2 vols.

Nicaragua (nik-a-rä'gwä or nē-kä-rä'gwä). One of the five republics of Central America. Capital, Managua; chief city, Leon. It is bounded by Honduras on the northwest and north, the Caribbean Sea on the east, Costa Rica on the south, and the Pacific on the west, and is traversed from southeast to northwest by a depression including the river San Juan and Lakes Nicaragua and Managua (the route of the proposed ship-canal). Much of the eastern coast included in the Mosquito Reservation is low (see *Mosquitia*). There are numerous volcanoes; earthquakes are frequent and sometimes violent. The most important exports are coffee, hides, cabinet-woods, rubber, fruits, and gold; silver-mining, formerly a very important industry, has been abandoned. The inhabitants are Spanish creoles, Indians, a few negroes, and mixed races. Spanish is the common language, and the state religion is Roman Catholic. The chief executive is a president, chosen for 4 years; and congress consists of a single house of 40 members. Columbus coasted the eastern side of Nicaragua in 1502, but it was first explored from the Pacific side by Gil Gonzalez Davila in 1521–22. It was settled 1524–25 by Francisco Hernandez de Cordoba, acting for Pedrarias. During the colonial period it was a province of Guatemala. Independence was proclaimed in 1821, and from 1823 to 1839 Nicaragua was a state in the Central

American Federation. Since 1840 it has been an independent republic. Civil wars and struggles with the other Central American republics have been frequent. The filibuster Walker held a part of the country 1855–56. Area, about 49,000 square miles. Population (estimated, 1894), 360,000.

Nicaragua, Lake. [See *Nicarao.*] A lake in the southern part of Nicaragua. It receives the waters of Lake Managua by the Tipitapa, and has its outlet in the San Juan. The surface is 110 feet above sea-level, the depth varying from 12 to 83 feet. There are several islands, the largest, Ometepe, containing two volcanic peaks. Length, 92 miles; greatest width, 40 miles.

Nicaragua Canal. A proposed ship-canal between the Pacific Ocean and the Caribbean Sea, crossing the republic of Nicaragua and utilizing the natural waterway furnished by Lake Nicaragua and the San Juan River. Partial surveys of this route were made by Americans in 1826 and 1837–1838, and more complete ones for the United States government in 1872–73 by Commander E. P. Lull, and in 1885 by A. G. Menocal. The Nicaraguan government made concessions for constructing the canal to Americans in 1849 and 1880 and to a Frenchman in 1858, but they all lapsed without results. In 1884 a treaty was signed for the construction of the canal by the United States government, but the Senate refused to ratify it. In 1887 the Nicaraguan government granted a new concession for 100 years (confirmed by Costa Rica) to the Nicaraguan Canal Company, by which it was transferred to the Maritime Canal Company: the latter was organized May 4, 1889, under a charter from the United States government, and it agreed to complete the work within five years. The route decided upon is from San Juan del Norte on the Caribbean Sea to Brito on the Pacific coast, a distance of 169½ miles. Of this about 117 miles is through the lake and the San Juan River, and in the remainder advantage can be taken of river-basins, so that the actual excavations will not exceed 27 miles. There are to be two canals proper, each with three locks: one from Ochoa on the San Juan River to the port of San Juan del Norte (about 35 miles, including the river-basins), and the other from Lake Nicaragua, at the mouth of the river Lajas, to Brito (17½ miles). The locks are to bring the canals to the necessary summit level, which in the lake is 110 feet. The deepest excavation will be on the eastern section where it crosses the eastern divide: here, for 3 miles, the average depth to be excavated is 141 feet. Subsidiary works are a dam at Ochoa, improvement of the river and lake channels, improvement of the harbor of San Juan del Norte, and the construction of a harbor at Brito, with the building of a short railroad for the transportation of machinery. The work was undertaken by the Nicaragua Construction Company, organized under the laws of Colorado June 10, 1887. This company purchased a part of the plant which had been used on the Panama Canal, and actual work was commenced at San Juan June 3, 1889. A great part of the necessary railroad was built and improvements of the harbor of San Juan (said to have been unsuccessful) were made. Work practically ceased from lack of funds in Dec., 1892, and on Aug. 30, 1893, the Nicaragua Construction Company went into the hands of a receiver. Measures for forming a new construction company commenced soon after. American engineers have generally favored the Nicaragua route as compared with other proposed canal-routes across the Isthmus. The chief objection raised to it, principally by French engineers, is the supposed liability of the canal to injury from earthquakes or volcanic eruptions.

Nicarao (nē-kä-rä′ō), or **Nicaragua.** A Central American Indian chief, whose tribe occupied territory near a large lake, subsequently called Lake Nicaragua (Nicarao-agua, 'water of Nicarao') by the Spaniards, from his name. The tribe was powerful and rich. Gil Gonzalez Davila first visited them in 1522, and obtained much gold by trading. See *Nicaraos.*

The Nicaraos appear to have been a distant offshoot of the Nahuatlecan stock. They were early subdued by the Spaniards, and their descendants form part of the peasant population of the same district.

Nicene Councils. Two general councils which met at Nicæa in Asia Minor. The first Nicene Council, which was also the first general council, met in 325, condemned Arianism, and promulgated the Nicene Creed in its earlier form. The second Nicene Council, accounted also the seventh general council, was held in 787, and condemned the Iconoclasts. The recognition of the first Nicene Council as ecumenical has been almost universal among Christians of all confessions. It is acknowledged to the present day not only by the Roman Catholic and Greek churches, and by many Protestant churches, but by Nestorians, Jacobites, and Copts. The Anglican Church does not accept the second Nicene Council as ecumenical.

D. A noted bishop of Myra, Lycia, Asia Minor. He has been adopted as the patron saint of Russia, and is also regarded as the patron saint of seafaring men, thieves, virgins, and children. He is a prominent saint of the Greek Church, and his festival is celebrated Dec. 6. He owes his position as Santa Claus (corruption of *Sant Nicolaus*) to the legend that he wished to preserve the three daughters of a poor nobleman from dishonor when the father, having no money for marriage portions, was about to force them to support themselves by a degrading life. St. Nicholas, passing the house at night, threw a purse of gold in at an open window for three nights in succession, thus furnishing a dowry for each daughter. On the third night the nobleman watched for and discovered him, but the saint made him promise not to reveal his munificence. From this incident is said to be derived the custom of placing gifts in the shoes or stockings of children on the eve of St. Nicholas's day, and attributing the gifts to Santa Claus. The custom has in some countries been transferred to Ch mas. The election of a boy bishop on St. Nicholas's (Dec. 6) is an ancient ceremony. Nihilists (nī'hil-ists). The adherents of nihilism. Nihilism was originally a social (not a political) movement in Russia, in opposition to the customary forms of matrimony, the parental authority, and the tyranny of custom; later, a more or less organized secret effort on the part of a large body of malcontents to overturn the established order of things, both social and political. In the former sense the word was introduced by Turgenieff in 1862. Nihilism comprises several Russian parties, differing in the means of action employed and in the immediate results aimed at, some leaning more toward political radicalism and violence, and others toward economic reorganization and socialism. The movement originated about 1840, and is due largely to the influence of the universities. About 1855–62 it became increasingly democratic, socialistic, and revolutionary under the leadership of Herzen and the magazine "Contemporary." About 1870 revolutionary ideas became the subject of a propaganda among workmen, peasants, and students. The adherents of this movement formed a "people's party" ("Land and Freedom") purposing the complete overthrow of the existing order of things and the establishment of a socialistic and democratic order in its stead. Under the influence of Bakunin (died 1876), and the persecution of peaceful propagandists by the government, the people's party divided into two factions—the "democratization of land" and the "will of the people," the latter being the stronger. This party was by government persecutions driven to a political contest, and the idea of demoralizing the forces of the government by terror originated and became popular: the adherents of this system called themselves "terrorists." After several unsuccessful attempts, they effected the death of the czar Alexander II. in 1881.

Nimrod (nim′rod). According to Gen. x., son of Cush, grandson of Ham, famous for his exploits as a hunter, at first ruler of Shinar (Shumir, *i. e.* South Babylonia), then founder of the Assyrian Tetrapolis (Asshur, Nineveh, Rehobothir, and Calah). Some Assyriologists identify Nimrod with Izdubar or Gilgamesh, the principal hero of the Babylonian Izdubar legends, or "Nimrod Epic." See *Izdubar.*

Outside the pages of the Old Testament nothing is known of Nimrod. The monuments of Assyria and Babylonia have hitherto refused to divulge the name. Certain scholars indeed imagined that it might be the pronunciation of the name of the hero of the great Chaldæan Epic, but we now know that such is not the case. Nimrod still remains to be discovered in the cuneiform texts.

Nimrud (nim′röd). An important archæological site in Assyria, on the left bank of the Tigris about 19 miles below Nineveh: the ancient Calah (which see). It was excavated by Layard between 1845 and 1851, and yielded the remarkable series of reliefs constituting the Nimrud Gallery in the British Museum. The site was occupied by several palaces in succession, according to the Oriental custom which required every monarch to build his own. The long series of changes and reconstructions makes the architectural history of the site difficult to unravel; however, except Khorsabad, this has been the most carefully explored and the most instructive site in Assyria. It is particularly interesting for its abundant remains of vaults built of crude brick in courses inclined diagonally against each other, so as to obviate the use of centering.

The treaty between France and Holland was concluded Aug. 10, 1678; that between France and Spain Sept. 17, 1678; that between the emperor on the one hand and France and Sweden on the other Feb. 5, 1679; and that between Holland and Sweden Oct. 12, 1679. Nineveh (nin′e-vē). [Heb. *Ninevé*, Assyr. *Ninua*, Gr. *Νινευή ἡ Νινος.*] In ancient geography, an important city and for a long time the capital of the Assyrian empire, situated on the eastern bank of the upper Tigris opposite the modern Mosul, and surrounded in ancient times by a shallow river (Khosr). The site, now marked by the two mounds of Kuyunjik and Nebi Yunus, was first identified in 1820 by J. C. Rich, political resident of the East India Company at Bagdad. The first attempts at excavation were made in 1842 by Paul Émile Botta, who, however, met with slight success: these were followed on a more extended scale by Sir Austen Henry Layard (1845–47, 1849–51), by Hormuzd Rassam (1854), and by George Smith (1873–76), the work being again taken up by Rassam on the death of Smith. As a result of these excavations, the general outline of the city, the remains of four palaces and numerous sculptures, and thousands of tablets (principally from the so-called library of Asurbanipal) were discovered. The greater part of these is now in the British Museum. The city had a circumference of from 7 to 8 miles, the ruins of the walls showing a height in some parts of 50 feet. It was in existence as early as the time of Samsi-ramman (1816 B. C.), who rebuilt a temple there. Shalmaneser I. (1330 B. C.) built a palace at Nineveh and made it the city of his residence. Samsi-ramman III. (824–811) decorated and restored the temple of Ishtar, famous for a special phase of the cult of the goddess. (See *Ishtar.*) Ramman-nirari III. (811–782) built a new palace on the site of the mound Nebi Yunus. For a time Nineveh was neglected, Sargon (722–705 B. C.), the founder of the new dynasty, abandoning it as the capital for a new town, Dur-Sarrukin (Khorsabad), which he built and made his residence. His son, Sennacherib (705–681 B. C.), was, however, a special patron of Nineveh. He surrounded it with a wall, replaced (695) the small palace at the northeast wall by a large one, built another palace which he filled with cedar wood and adorned with colossal bulls and lions, and beautified the city with a park. The Old Testament (2 Ki. xix. 36, Isa. xxxvii. 37) mentions Nineveh as the residence of Sennacherib. Esarhaddon (680–668 B. C.) finished a temple, widened the streets, and beautified the city, forcing the kings whom he conquered to furnish materials for adorning the city and palaces. Nineveh succumbed to the combined attack of the Medes under Cyaxares and the Babylonians under Nabopolassar in 606 (606?) B. C. See also *Assyria, Cyaxares, Kuyunjik,* and *Nebi Yunus.*

Nine Worthies, The. Nine heroes of romance and chivalry whose story is told in Arthurian legends. In one of these, the "Triumphes des neufs Preux," "the author feigns that there appeared to him in a vision nine heroes, and in a second vision a tenth hero, viz., Joshua, David, Judas Maccabæus, Hector, Alexander the Great, Julius Cæsar, and then Arthur, Charlemagne, Godfrey of Bouillon, and finally Bertrand du Guesclin; they charge him to undertake the description of their lives and feats, in order that Lady Triumphe, who appears with them, may be enabled to decide which of them has deserved her crown. . . . The nine heroes of this romance are not infrequently mentioned in the earlier English literature. Shakespeare alludes in 'Love's Labour 's Lost' (act v. sc. 2) to the Nine Worthies. Further, they appear in the verses which precede the Low-German history of Alexander the Great (Brun's 'Altplattdeutsche Gedichte,' p. 336, etc. See also Warton, vol. iv. p. 151, note a, Lond. 1824). They figure also in tapestry and paintings (Warton, ii. p. 44, note 9). This selection of thrice three heroes may very likely have originated in the 'Welsh Triads,' where the three Pagan, Jewish, and Christian trinities are enumerated as follows: Hector, Alexander, and Julius Cæsar; Joshua, David, and Judas Maccabæus; Arthur, Charlemagne, and Godfrey de Bouillon. For Godfrey is sometimes substituted Guy of Warwick." *Dunlop*, Hist. of Prose Fiction, I. 269, 270.

The "Pageant of the Nine Worthies," out of which so much fun is made in Shakspere's "Love's Labour 's Lost,"

was represented in Queen Mary's time. "Each of the Worthies," says Strype, "made his speech," no doubt commencing, as in the comedy, with "I Pompey am," "I Judas am," etc. *Ward.*

Later he was associated with Cristobal Guerra in a trading expedition to the pearl coast (Venezuela). They left Spain about June, 1499, with a single small vessel, and returned richly laden with pearls and gold in April, 1500. This was the first financially profitable voyage to the American coast.

Niobe (nī'ō-bē). [Gr. *Νιόβη.*] In Greek mythology, the daughter of Tantalus and wife of Amphion, king of Thebes. Proud of her numerous progeny, she provoked the anger of Apollo and Artemis by boasting over their mother Leto, who had but those two children. She was punished by seeing all her children die by the arrows of the two light-deities. She herself was metamorphosed by Zeus into a stone which it is still sought to identify on the slope of Mount Sipylus, near Smyrna. This legend has afforded a fruitful subject for art, and was notably represented in a group attributed to Scopas, now best known from copies in the Uffizi at Florence. See *Niobe group.*

Niobe group. A celebrated collection of 18 antique statues, 12 of which were found in Rome in 1583, now in the Uffizi, Florence. They are good Roman copies of Greek originals ascribed with probability to Scopas, though by some to Praxiteles, representing Niobe horror-stricken in the midst of her children, who are being struck to death by the unseen shafts of Apollo and Artemis. The central figure, Niobe, seeks to shelter, with her arm and her mantle, her youngest daughter, who kneels terrified at her feet. The other children, youths and maidens, are dead, dying, or fleeing, seeking to ward off the inevitable blow, or awaiting it with resignation. The existing group is incomplete: the original was probably arranged pyramidally for the decoration of a pediment.

Niobites (nī'ō-bīts). A branch of the Monophysites, founded by Stephanus Niobes in the 6th century, who opposed the views of the Severians. See *Severians.* Niobes taught that, according to strict Monophysite doctrine, the qualities of Christ's human nature were lost by its absorption into his divine nature. The Niobites gradually modified their views and returned to the orthodox church.

The city existed in the earliest Babylonian period, an inscription of Naram-Sin (3750 B. C.) having been found there. Bel and Beltis were its special divinities. Nippur was visited by Sir Austen Henry Layard, who made some slight excavations and found several enameled coffins and other objects. It was excavated by an American expedition sent out by the University of Pennsylvania 1889–91 under the leadership of Dr. John P. Peters, and many inscriptions and other objects were found there. Nirukti (ni-rök'ti). [Skt., 'interpretation.'] In Sanskrit literature, an exposition in 12 books, by Yaska, of the Nighantu or Nighantavas. See *Nighantu.* "It is in Yaska's work, the Nirukti, that we find the first general notions of grammar. Starting from the phonetic rules, advance was made first to a general view of phonetics, and thence to the remaining portions of the domain of language. Inflection, derivation, and composition were recognized and distinguished, and manifold reflections were made upon the modifications thereby occasioned in the meaning of a root." (*Webcr.*) As to Yaska's date, it can only be said that he belonged to the last stages of the Vedic period. His Nirukti has been edited by Roth.

Nirvana (nir-vä'nä). [Skt., 'blowing out' (as of a light), 'extinction.'] In Buddhism, the condition of a Buddha; the state to which the Buddhist saint aspires as the highest aim and highest good. Originally, doubtless, this was the extinction of existence, Buddha's attempt being to show the way of escape from the miseries inseparably attached to life, and especially to life everlastingly renewed by transmigration, as held in India. But in later times this negation has naturally taken on other forms, and is explained as extinction of desire, passion, unrest, etc.

Nisæa (nī-sē'ä). In ancient geography, a region in Media (perhaps near the Caspian Gates), famous for its breed of horses.

The Nisæan breed of horses continued in repute down to the times of Ammianus Marcellinus (xxiii. 6). They excelled all others in size and speed, and were generally the property of the Persian kings or nobles of the highest rank. The situation of the Nisæan plain from which they were said to derive their name is uncertain. According to Strabo, some placed it in Armenia; others, according to Suidas, in Persia. The general consent, however, of the best writers assigns it to Media, where we know from the Behistun Inscription that there was a district Nisæa or Nisaya. *Rawlinson,* Herod., IV. 39, note.

The one supreme and impassible Father united to himself the man Jesus, whom He had created, by so intimate a conjunction that the divine unity was not destroyed. His adversaries drew the conclusion that, according to this blaspheming theory, the Father must have suffered on the cross; and the ignominious name of Patripassians adhered to the few followers of this unprosperous sect. *Milman*, Hist. of Christianity, II. 360.

It has manufactures of mustard, starch, beer, iron, textiles, etc. The cathedral began in 1096, is said to preserve its Norman plan with less alteration than any other English cathedral. The nave was completed in 1140, the clearstory of the choir was rebuilt in the 14th century, and the vaulting dates from the 15th, at which time the west front was modified and the tall slender spire rebuilt. The exterior is surrounded by a picturesque arcade of small arches and columns, above the lowest range of windows. In the interior the simple nave is Norman, except the Perpendicular windows and the vaulting. The choir is shut off from the nave by a solid screen surmounted by a tall organ, more disastrous as an obstruction to the view than the inclosure of the "coro" of a Spanish cathedral. The choir terminates in a polygonal chevet, the only example of this form in an English church of the first rank. The triforium-gallery is notably wide and high. The dimensions of the cathedral are 407 by 78 feet; length of transepts, 178; height of vaulting—nave 70, choir 83½; height of spire, 315 feet. The Decorated cloister is large and beautiful, and the episcopal palace is in large part of the 14th century. The Church of St. Peter Mancroft, the castle, and St. Andrew's Hall are also noteworthy. Norwich was a British and a Roman town; was burned by Sweyn; became the seat of the bishopric of East Anglia in 1094; received a colony of Flemish weavers in the 14th century; and became an important center for cloth manufactures. > Its full title is, "Notitia dignitatum omnium, tam civilium quam militarium, in partibus Orientis et Occidentis." There can be little doubt that it was compiled in the first years of the fifth century, probably about the time of Alaric's first invasion of Italy. It is a complete Official Directory and Army List of the whole Roman Empire, and is of incalculable value for the decision of all sorts of questions, antiquarian and historical. For instance, the whole theory of the identification of the existing ruins with the former stations along the line of Hadrian's British Wall depends entirely on the mention in the Notitia of the names of the cohorts posted at those stations.

The transept-fronts are unsurpassed in their way, and the long range of windows and flying buttresses of nave and choir is highly effective. The figure- and foliage-sculpture of the exterior is abundant and artistically remarkable. The graceful rood-spire was built by Viollet-le-Duc in place of the original one. The interior, with nave and double aisles continued around the choir, measures 156 by 420 feet, and 110 high. The three roses retain their original glass, but the remainder of the glass is modern. Nouvelle Héloïse, Julie ou la (zhü-lē' ö lä nō-vel' ä-lō-ēz'). A sentimental novel by J. J. Rousseau, published in 1761.

This is a story told chiefly in the form of letters, and recounting the love of a noble young lady, Julie, for Saint-Preux, a man of low rank, with a kind of after-piece depicting Julie's married life with a respectable but prosaic free-thinker, M. de Wolmar. This famous book set the example, first, of the novel of sentiment; secondly, of the novel of landscape-painting. Many efforts have been made to dethrone Rousseau from his position of teacher of Europe in point of sentiment and the picturesque, but they have had no real success. It is to "La Nouvelle Héloïse" that both sentimental and picturesque fictions fairly owe their original popularity; yet "Julie" cannot be called a good novel. Its direct narrative interest is but small, its characters too intensely drawn, or else too merely conventional, its plot far too meagre. It is in isolated passages of description, and in the fervent passion which pervades parts of it, that its value, and at the same time its importance in the history of novel-writing, consist.

In 1794 he received a subordinate judicial position at Tennstädt in Thuringia, which, however, he soon abandoned to take up mining engineering as offering more rapid advancement. He died at the age of 29. His lyric poems are both secular and religious. "Hymnen an die Nacht" ("Hymns to Night") are lyrics in prose evoked by the death of Sophie von Kühn, to whom he was engaged. A novel, "Heinrich von Ofterdingen," is fragmentary. As a writer he belongs to the so-called older Romantic school, of which he was the best lyric poet. His collected writings were published at Berlin, 1802, in 2 vols., to which were added a third (Berlin, 1846) and "Eine Nachlese" ("Gleanings": Gotha, 1873). It is not a political division. The chief portions are the valley of the Nile and Taka. It is nominally an Egyptian possession. The chief city is Khartum, at the junction of the White Nile and the Blue Nile. The inhabitants are Nubas (see *Nuba*), Arabs, and Ababdeh (Hamitic). It was subject to Thothmes III.; was part of the ancient Ethiopia; and was conquered by the forces of Mehemet Ali in 1820–1822. It fell into the power of the Mahdi in 1883; and it was the scene of English-Egyptian expeditions in 1883–85.

The Nubians, in spite of their black skins, are usually classed among the handsomest of mankind, just as the negroes are among the ugliest. They are tall, spare, and well-proportioned. The hair is black and fairly straight, and there is very little of it on the body. The nostrils and lips are thin, the eyes dark, the nose somewhat aquiline. The flat feet with which they are credited are not a racial characteristic, but are due to their walking without shoes. As among the Egyptians, the second toe is longer than the first. Constitutionally the Nubians are delicate, and are peculiarly sensitive to pneumonia. They suffer also from early decay of the teeth, and are not a long-lived race.

It was intended to furnish a correct method philosophical inquiry into all the objects and subjects human knowledge, including the process of reasoning d laws of thought. It begins by propounding 16 topics, which the first is the means by which the right mea- sure of any subject is to be obtained. The processes by which true knowledge is attained are declared to be (1) sense perception; (2) inference; (3) comparison; (4) verbal authority or trustworthy testimony, including Vedic revelation. Inference is divided into 5 members: (1) the proposition stated hypothetically; (2) the reason; (3) the example or major premise; (4) the application of the reason or minor premise; (5) the conclusion, or the restatement of the proposition as proved. The terms "invariable pervasion" or "concomitance," "pervader" or "invariably pervading attribute," and "invariably pervaded" are used in making a universal affirmation or in affirming universal distribution. The second topic is those points about which correct knowledge is to be obtained, viz.: (1) soul; (2) body; (3) senses; (4) objects of sense; (5) understanding; (6) mind; (7) activity; (8) faults; (9) transmigration; (10) consequences or fruits of action; (11) pain; (12) emancipation. The other 14 topics are an enumeration of the regular stages of a controversy, including (1) doubt about the point to be discussed; (2) a motive for discussing it; (3) a familiar example in order that a conclusion may be arrived at; (4) the argument of the objector with its 5 members; (5) the refutation, and ascertainment of the true state of the case; (6) further controversy; (7) mere wrangling; (8) cavilling; (9) fallacious reasoning; (10) quibbling artifices; (11) futile replies; after which follows (12) the putting an end to all discussion. After discussing his 16 topics Gotama states how deliverance from repeated births is to be attained. See Williams's "Indian Wisdom." IV., and the translations by Ballantyne and Colebrooke.

He was called the "Invincible Doctor," the "Singular Doc- tor," "Princeps Nominalium," and in the ages following his own "Venerabilis Inceptor," as if he had not actually taken his degree. He was a great advocate of the rule of poverty of the Franciscan order, to which he belonged, and a strong defender of the state against the pretensions of the papacy. He was lecturer in the University of Paris; aided Louis of Bavaria in his contest with Pope John XXII.; and opposed the latter in the Franciscan assem- bly at Perugia in 1322. All his teachings depend upon the logical doctrine that generality belongs only to the significations of signs (such as words). The conceptions of the mind are, according to him, objects in themselves in- dividual, but naturally significative of classes. These prin- ciples are carried into every department of logic, meta- physics, and theology, where their general result is that nothing can be discovered by reason, but all must rest upon faith. Occamism thus prepared the way for the over- throw of scholasticism, by arguing that little of importance to man could be learned by scholastic methods: yet the Occamistic writings exhibit the scholastic faults of trivial- ity, prolixity, and formality in a higher degree than those of any other school. His chief works are "Tractatus logices," "Tractatus de sacramento altaris," "Super quatuor libros sententiarum expositio aurea."

Occleve (ok'klēv), **Thomas.** [ME. *Occleve,* some- times with unorig. aspirate *Hoccleve:* prob. of local origin; AS. as if **ác-clif,* pl. **áccleafu,* oak-cliff.] Born about 1370: died about 1454. An English poet and lawyer. He lived at Chester's Inn in the Strand in his youth, and knew Chaucer. His chief poem is "De regimine principum," a new version of "The Governail of Princes." Some of his poems were printed for the first time in 1796 by George Mason, but a number were printed 1487–1598 at Paris, Lyons, Venice, and Strasburg.

The old confusion with the aspirate has caused the name to be written both "Hoccleve" and "Occleve." But in a copy of "The Governail of Princes," which the poet wrote with his own hand, the name occurs in the text, and is writ- ten "Occleve." Another day he might have written "Hoc- cleve," and he may have done so in his own draft of the first line of his that will presently be quoted. But the name is Occleve in the only place where we are sure, or nearly sure, that he himself has written it.

The key to the confused geography of the "Germania," as regards northern Germany, will be found in a compari- — of the passages in which he [Tacitus] mentions the "Oceanus," or ocean-current, as distinguished from the seas which were crossed or divided by its stream. The Islands of the Suiones, or the Danish Isles and Southern Scandinavia, are described as being actually encircled by "Oceanus." *Elton,* Origins of Eng. Hist., p. 42, note.

Born at Cas- telli (Licastoli) in Calabria about 1508, Ochiali was to have been a priest, but his capture by the Turks turned him to the more exciting career of a Corsair. Soon after the siege of Malta he succeeded Barbarossa's son Hasan as pasha or Beglerbeg of Algiers (1568), and one of his first acts was to retake Tunis (all but the Goletta) in the name of Sultan Selim II., who, to the unspeakable loss of the Mohamme- dan world, had in 1566 succeeded his great father Suley- man. In July, 1570, off Alicata, on the southern coast of Sicily, Ochiali surrounded four galleys of "the Religion" — they then possessed but five — and took three of them, including the flag-ship, which Saint Clément, the general of the galleys, abandoned in order to throw himself and his treasure on shore at Montichiaro.

Odyssey (od′i-si). An epic poem, attribu Homer, in which are celebrated the adve of Odysseus (Ulysses) during ten years o dering, spent in repeated endeavors to r to Ithaca, his native island, after the c the Trojan war. Some critics, both ancient and m who have acknowledged the Homeric origin of th attribute the Odyssey to a different author. (See The Odyssey is the only complete surviving exam whole class of epics, called *Nostoi,* describing the voyages of various Greek heroes from Troy. phemus devoured six of the intruders, and kept Odys-
and the others prisoners. Odysseus made Polyphe-
drunk with wine, put out his eye with a burning
and escaped with his companions by concealing him-
and them under the bellies of the sheep which the
ps let out of his cave. Thenceforth, however, he
pursued by the anger of Poseidon, who sought to re-

ous and Arete. He was carried to Ithaca by the
itable Phæacians, and after slaying the suitors of his
Penelope, who had been wasting his property during
bsence, was welcomed by his wife and subjects.

ough there was controversy in old days about the
ity of the Iliad, it seems quite settled now that we
look upon the Odyssey as a later poem — how much
it is impossible to say. The limits assigned have
d from those who believe it the work of the same

(as M. E. Burnouf does), owing to the difference of
an and style. But, as Bonitz says, if not composed

developed. The plot of the Odyssey is skilfully

Ogham. In Celtic mythology. See the extracts.

> The word "ogham," in modern Irish, stands for the occult sciences; and, according to Lucian, Oghum was painted in the second century as a Herculean Mercury, old, in a lion's skin, with a club in his right hand and a bent bow in his left, the ears of his worshippers bound by a chain of gold and amber to his tongue.
>
> *Morley*, English Writers, I. 168.

He is signalized in Irish mythology as the inventor of writing, that is to say of the Ogam alphabet: for Ogma being much skilled in dialects and in poetry, it was he, we are told, who invented the Ogam to provide signs for secret speech only known to the learned, and designed to be kept from the vulgar and poor of the nation. The motive attributed to Ogma is an invention of a comparatively late age, for there was nothing cryptic about the Ogam alphabet; but the allusion to Ogma's skill in poetry and dialects is important, especially as there was not only a mode of writing called Ogam, but also a kind of pedantic jargon which bore that name. Now Irish legend will have it that the Ogam was so called from the name of Ogma, which is etymologically impossible.

Barrois, who has edited the 12th-century chanson, which is written in the Walloon dialect by Raimbert, a trouvère, thinks he should be called Ogier l'Ardennois or d'Ardenmarche. The trouvère Adenès also wrote a chanson de geste of the same cycle. Ogier, the son of Geoffrey the king of Denmark, is brought up at the court of Charlemagne, and at one period of the romance assumes the crown of Denmark; but he tires of it and returns to Charlemagne, becoming one of his chief paladins. After a successful and warlike career, at the age of 100 years he is carried away to the Isle of Avalon by Morgan le Fay, who restores him to youth, with entire forgetfulness of the world, but sends him back, after 200 years have passed, to defend France. After repelling its invaders and restoring the old spirit of knighthood, he returns to Avalon, where he sleeps, and whence he may again awake and return to defend the right. As Holger Danske, he has been raised to the position of Danish national hero.

O'Higgins joined San Martin in the invasion of Chile, and his charge decided the victory of Chacabuco (Feb. 12, 1817): three days after (San Martin having refused the office) O'Higgins was named supreme director of Chile with dictatorial powers. Olympia (ō-lim'pi-ą). [Gr. *'Ολυμπία.*] In ancient geography, a valley in Elis, Peloponnesus, Greece, situated on the Alpheus in lat. 37° 38′ N., long. 21° 38′ E. It is famous as the seat of a celebrated sanctuary of Zeus and of the Olympic games, the most important of the great public games of classical antiquity. (See *Olympic games.*) The origins of the sanctuary and of the games are anterior to history: according to tradition the latter were reorganized, in obedience to the Delphic oracle, in the 9th century B. C. The list of Olympian victors goes back to 776 B. C., which is the first year of the first Olympiad: but the Olympiads did not come into accepted use in chronology until much later. The sanctuary was situated in the valley between the rivers Cladeus and Alpheus, at the foot of the hill of Cronus. A trapeziform inclosure called the Altis, about 500 by 600 feet, surrounded the temple of Zeus, the Heræum, the Metroum, the treasuries of the various Greek cities and states, and other buildings, besides numberless statues and other works of art, and steles with commemorative inscriptions. Outside of the Altis lay the Bouleuterion or senate-house, the Stadium, which was the chief scene of the athletic contests, and a number of large gymnasia, and thermæ, the last chiefly of Roman date. The Olympic games were abolished by Theodosius in 394 A. D. The monuments were much shattered by earthquakes in the 6th century, and as time went on were progressively buried by landslips from Cronus and inundations of the Cladeus and Alpheus, in one of which the hippodrome was entirely washed away. Sand and earth were deposited to a depth of from 10 to 20 feet over the ruins. In 1829 the French Expédition de Morée made some superficial excavations, and recovered some sculptures (now in the Louvre) from the Zeus temple. In six seasons of work after 1874, the German government laid bare down to the ancient level the greater part of what survives of the sanctuary. The sculptural finds were less than had been hoped for, though they include two capital pieces—the Hermes of Praxiteles and the Nike of Pæonius. In the departments of architecture and epigraphy, however, the German excavations take rank as the most important that have been made. The antiquities discovered are preserved on the site, the more precious in a museum built for the purpose. The temple of Zeus, dating from the early part of the 5th century B. C., is a Doric peripteros of 6 by 13 columns, measuring 90¾ by 210¼ feet: the columns were over 7 feet in base-diameter and 34 high. The cella had pronaos and opisthodomos with 2 columns in antis and 2 interior ranges of 7 columns. In the cella stood the famous chryselephantine statue of Zeus, seated, about 40 feet high, by Phidias. The pediments were filled with important groups of sculpture, much of which has been recovered. That of the eastern pediment represents the chariot-race of Pelops and Œnomaus, under the presidency of Zeus; that of the western the fight between Lapiths and Centaurs in presence of Apollo. The end walls of the cella bore a Doric frieze with very fine sculptured metopes representing the exploits of Hercules. The Heræum, or temple of Hera, a temple of very ancient foundation, showing evidences of original construction in wood and unburned brick partly replaced piecemeal in stone with the advance of time, is a large Doric peripteros of 6 by 16 columns: the cella had pronaos and opisthodomos in antis, and was divided in the interior into 3 aisles by 2 ranges of columns. The famous Hermes of Praxiteles was found in this temple. The Philippeum is a circular building built by Philip of Macedon about 336 B. C. The cella was surrounded by a peristyle of 18 Ionic columns, and had in the interior a range of Corinthian columns, and chryselephantine statues of Philip and his family.

Olympic games, The. The greatest of the four Panhellenic festivals of the ancient Greeks. They were celebrated at intervals of four years, in honor of Zeus, in a sacred inclosure called the Altis, in the plain of Olympia (which see), containing many temples and religious, civic, and gymnastic structures, besides countless votive works of art. The festival began with sacrifices followed by contests and racing, wrestling, etc., and closed on the fifth day with processions, sacrifices, and banquets to the victors. The victors were crowned with garlands of wild olive; and on their return home they were received with extraordinary distinction, and enjoyed numerous honors and privileges. The period of four years intervening between one celebration and the next, called an *Olympiad,* is notable as the measure by which the Greeks computed time—776 B. C. being the reputed first year of the first Olympiad.

Olympieum (ō-lim-pi-ē'um), or **Temple of Olympian Zeus.** A temple founded at Athens by Pisistratus, but not completed in the form represented by the existing ruins until the reign of Hadrian. The temple was Corinthian, dipteral, with 8 columns on each front and 20 on each flank, and measured 134 by 353½ feet. Fifteen huge columns, 56½ feet high, are still standing, and one lies prostrate. The temple stood in a large peribolos which was adorned with statues.

Olynthus (ō-lin'thus). [Gr. *'Ολυνθος.*] In ancient geography, a city in Chalcidice, Macedonia, situated near the head of the Toronaic Gulf, in lat. 40° 16′ N., long. 23° 21′ E. It was the capital of an important confederacy until its suppression by Sparta in the war of 383–379 B. C. It was attacked by Philip II. of Macedon and was captured and destroyed by him 347 B. C. The Olynthiac orations of Demosthenes were appeals to Athens to support Olynthus against Philip.

Om (ōm, but originally and more correctly ōṁ). [According to Böhtlingk and Roth, an obscuration of Skt. *āṁ,* the result of prolonging and nasalizing *ā,* an asseverative particle; according to Bloomfield (A. O. S. xiv. cl.), identical with Gr. *aṽ,* L. *au-t, au-tem,* Goth. *au-k,* and meaning 'now then,' 'well now.'] A particle that plays a great rôle in Hindu religious literature. Its original sense is that of solemn affirmation. Popular etymology perhaps associating it with a root implying 'favor, further,' and its sanctity being inferred from its occurrence in the Vedic literature, it became the auspicious word with which the teacher began and the pupil ended each lesson of the Veda. Much of the Upanishads treats of the mystic meaning of *Om,* as summing up in itself all truth. In later Hinduism it is regarded as consisting of the three elements *a, u,* and *m,* symbolizing respectively Vishnu, Shiva, and Brahma, so that the pranava ('murmur') *Om* signifies the Hindu triad. (See Bloomfield as quoted above.) *Om* is also the first syllable of the "formula of six syllables" *Om mani padme hum,* so conspicuous in Buddhism and especially in Lamaism. Its reputed author is the deified saint Avalokiteshvara (which see), or Padmapani, 'the lotus-handed,' as he is called by Tibetans. It is variously translated. Bloomfield gives "Óm, O jewel on the lotus, hum"; Goldstücker, "Salvation (Om) [is] in the jewel-lotus (mani-padme), amen (hum)," where the compound "jewel-lotus" refers to the saint and the flower from which he arose, according to which the formula was originally an invocation to Avalokiteshvara.

Omaguas (ō-mä′gwäs): called **Cambevas** (kämbā′väs) by Brazilians. An Indian tribe of northern Peru, on the north side of the upper Marañon, between long. 72° and 75° W. (territory claimed but not held by Ecuador). They were formerly very numerous, having many large villages connected by good roads. They were agriculturists, dressed in cotton garments, used gold ornaments, and are said to have been sun-worshipers: probably they had derived the germs of civilization from the Incas. Their heads were artificially flattened. O. P. Riots. The "old-price riots," which took place at Covent Garden Theatre, London, in 1809. The cost of the new theater then just built was so great that the proprietors raised the price of admission, and the public resolved to resist.

> The house opened on the 18th of September, 1809, with "Macbeth" and the "Quaker." The audience was dense and furious. They sat with their backs to the stage, or stood on the seats, their hats on, to hiss and hoot the Kemble family especially; not a word of the performance was heard, for when the audience were not denouncing the Kembles, they were singing and shouting at the very tops of their then fresh voices. The upper gallery was so noisy that soldiers, of whom 500 were in the house, rushed in to capture the rioters, who let themselves down to the lower gallery, where they were hospitably received. The sight of the soldiers increased the general exasperation. [The excitement continued for weeks, and many of the rioters were arrested.] The acquittal of leading rioters gave a little spirit to some after displays; but it led to a settlement. Audiences continued the affray, flung peas on the stage to bring down the dancers, and celebrated their own O. P. dance before leaving; but, at a banquet to celebrate the triumph of the cause in the acquittal of the leaders, Mr. Kemble himself appeared. Terms were there agreed upon; and on the sixty-seventh night a banner in the house, with "We are satisfied" inscribed on it, proclaimed that all was over. After such a fray the satisfaction was dearly bought. The 4s. rate of admission to the pit was diminished by 6d., but the half-price remained at 2s. The private boxes were decreased in number, but the new price of admission to the boxes was maintained. Thus, the managers, after all, had more of the victory than the people; but it was bought dearly.

It now consists of four classes, besides a fifth class wearing the silver cross of the order without being regular members of it, the silver cross being awarded for some meritorious act or distinguished service. The order may be bestowed on foreigners.—**Order of the Fan,** a Swedish order founded in 1744, and now extinct.—**Order of the Fish,** a decoration founded by the Mogul emperors in India, and conferred upon certain English statesmen in the early part of the 19th century. The insignia are of the nature of standards borne before the person upon whom the order is conferred.—**Order of the Garter,** the highest order of knighthood in Great Britain, consisting of the sovereign, the Prince of Wales, and 25 knights companions, and open, in addition, to such English princes and foreign sovereigns as may be chosen, and sometimes to extra companions chosen for special reasons, so that the whole order usually numbers about 50. Formerly the knights companions were elected by the body itself, but since the reign of George III. appointments have been made by the sovereign. The order, at first (and still sometimes) called the Order of St. George, was instituted by Edward III. some time between 1344 and 1350, the uncertainty arising from the early loss of all its original records. Its purpose has been supposed to have been at first only temporary. According to the common legend, probably fictitious, King Edward III. picked up a garter dropped by the Countess of Salisbury at a ball, and placed it on his own knee with the words to his courtiers, in response to the notice taken of the incident, "Honi soit qui mal y pense" ('Shamed be he who thinks evil of it'). To this incident the foundation, the name, and the motto of the order are usually ascribed. The insignia of the order are the garter, a blue ribbon of velvet edged with gold and having a gold buckle, worn on the left leg; the badge, called the George or great George, a figure of St. George killing the dragon, pendent from the collar of gold, which has 26 pieces, each representing a coiled garter; the lesser George, worn on a broad blue ribbon over the left shoulder; and the star of 8 points, of silver, having in the middle the cross of St. George encircled by the garter. The vesture consists of a mantle of blue velvet lined with white taffeta, a hood and surcoat of crimson velvet, and a hat of black velvet with a plume of white ostrich-feathers having in the center a tuft of black heron-feathers. The sovereign, when a woman, wears the ribbon on the left arm.—**Order of the Golden Fleece,** an order founded by Philip the Good, duke of Burgundy, in 1430, on the occasion of his marriage with the infanta Isabella of Portugal. The office of grand master passed to the house of Hapsburg in 1477 with the acquisition of the Burgundian dominions, which included the Netherlands. After the time of the emperor Charles V. (died 1558) this office was exercised by the Spanish kings; but after the cession of the Spanish Netherlands to Austria, the latter power in 1713-14 claimed the office. The dispute remains undecided, and the order therefore exists independently in Austria and in Spain. The badge of the order is a golden ram pendent by a ring which passes round its middle. This hangs from a jewel of elaborate design, with enameling of several colors, various suggestive devices, and the motto "Pretium laborum non vile."—**Order of the Griffin,** an order of the grand duchy of Mecklenburg-Schwerin, founded in 1884.—**Order of the Holy Ghost.** (*a*) (Often called by the French name *Saint Esprit*.) The king was the grand master, and there were 100 members, not including foreigners. The members were required to adhere to the Roman Catholic Church and to be of a high grade of nobility. The decoration was a gold cross attached to a blue ribbon, and the emblems were a dove and an image of St. Michael. The order has been in abeyance since the revolution of 1830. The present insignia of the order are quite different from those of the original order. The ribbon is sky-blue, but on state occasions the badge is worn pendent to a collar of white eagles connected by plain gold links.—**Order of the White Elephant** a Danish order alleged to be of great antiquity. Its foundation, however, is specifically ascribed to Christian I. (1462), and its reorganization to Christian V. (1693). It is limited to 30 knights besides the members of the royal family, and no person can be a knight who is not previously a member of the Order of the Danebrog. The collar of the order is composed alternately of elephants and embattled towers. The badge is an elephant bearing on his back a tower, and on his head a driver dressed like a Hindu. The ribbon to which the badge is attached on ordinary occasions is sky-blue.—**Order of the White Falcon,** an order founded by the Duke of Saxe-Weimar in 1732, and renewed in 1815. Orestes. A play of Euripides, exhibited 409 B. C.

In the looseness and carelessness of the metre, the crowding of incidents at the end of the play, in the tone of its morality—they are all base, says the scholiast, except Pylades, and yet even he advises a cold-blooded murder for revenge's sake—there is no play of Euripides so disagreeable. On the other hand, for dramatic effect, as the same scholiast observes, there is none more striking; but this applies only to the opening scenes.
Mahaffy, Hist. of Classical Greek Lit., I.

Orestes. Killed 476 A. D. Regent of the Western Empire in the reign of his son Romulus Augustulus (475–476).

The army had revolted, and the commander-in-chief, an Illyrian named Orestes, had seized the reins of government. This Orestes had a strange history. About twenty years before the date of the events just mentioned his native country—the northern part of what is now Croatia—had been given up by the Romans to the Huns. Orestes, who was then quite a young man, finding himself one of Attila's subjects, offered his services to the Hunnish king, and seems to have acted as his secretary in this capacity he was in the year 448 sent on a mission to Attila to the eastern emperor, Theodosius II., and while of his being terribly indignant because he was not received as a person of equal consequence with his fellow-envoy Edica the Scirian. By what curious chances it came about that the former secretary of Attila now found himself at the head of the Roman army, and master of the Italian state, history does not tell. Orestes did not choose to call himself emperor, thinking, perhaps, that it was safer to be the wearer of the diadem and the real holder of power to be different persons. He contented himself with the title of Patrician, the same which had been borne by Ricimer and by Aetius, and bestowed the imperial crown on his son, a boy of fourteen, who was named Romulus after his paternal grandfather. *Bradley,* Story of the Goths, p.

Its remains are found in this position, and still bear the name of Oreo. We learn from Theopompus that when Pericles conquered Eubœa and expelled the Histiæans, while they sent a refuge in Macedonia, 2,000 Athenian citizens took their place, and colonised Oreus, which had before been the ship of Histiæa. *Rawlinson,* Herod., IV. 27.

[Formerly also *Orleaunce*, ME. *Orleans, Orleaens, Orliauns*, OF. *Orleans, Orlians*, LL. *Aureliani*, or *Aurelianensis*, Aurelian's (city).] The capital of the department of Loiret, France, situated on the Loire in lat. 47° 54′ N., long. 1° 54′ E.: the medieval Aureliani, and probably the ancient Genabum. It has important commerce in wool, wines, grain, timber, oil, etc., and manufactures of blankets, hosiery, worsted, vinegar, etc. The cathedral is a building of great size, rebuilt by Henry IV. (begun in 1601) in as close an approximation as possible to the architecture of the original Pointed cathedral destroyed by the Huguenots. The façade, with its 5 portals and 2 lofty towers, is of gingerbread work; but much of the chevet and apsidal chapels belongs to the earlier church, and is very fine. The five-aisled interior is 485 feet long, and the nave 100 high. Orléans was a town of the Carnutes. It was destroyed by Cæsar, but was rebuilt by Aurelian, occupying an important military position. It was unsuccessfully besieged by Attila in 451; was a leading town from the Merovingian times; and was the chief place of Orléanais. The famous siege of it commenced by the English Oct. 12, 1428, was raised in May, 1429, in consequence of the assaults of the relieving forces under Joan of Arc (see the extract). It was a Huguenot center about 1563. A victory of the Germans over the French, Oct. 11, 1870, was accompanied by the capture of the city. The French retook it in Nov.; but in the severe fighting of Dec. 2–4 they were worsted, and the Germans again occupied it. Population (1901), 67,539.

The Loire, flowing first northwards, then westwards, protects, by its broad sickle of waters, this portion of Gaul, and the Loire itself is commanded at its most northerly point by that city which, known in Cæsar's day as Genabum, had taken the name Aurelianì from the great Emperor, the conqueror of Zenobia, and is now called Orléans. Three times has Aurelianì played an eminent part in the history of Gaul. There broke out the great insurrection of B. C. 52 against the victorious Cæsar; there Attila's host, in A. D. 451, received their first repulse; and there in 1429, the maid of Domremy, by forcing the Duke of Bedford to raise the siege, wrested from the English Plantagenets their last chance of ruling in France.

Orléans, Charles, Duc **d'.** Born May 26, 1391: died Jan. 4, 1465. A French poet, son of Louis, duc d'Orléans. He was taken prisoner by the English at Agincourt in 1415, and released in 1440. His poems were edited by d'Héricault in 1874.

The life of this poet . . . falls into three divisions. In the first, when after his father's death he held the position of a great feudal prince almost independent of royal control, it is not recorded that he produced any literary work. His long captivity in England was more fruitful, and during it he wrote both in French and in English. But the last five-and-twenty years of his life, when he lived quietly and kept court at Blois (bringing about him the literary men of the time from Bouciqualt to Villon, and engaging with them in poetical tournaments), were the most productive. His undoubted work is not large, but the pieces which compose it are among the best of their kind.

Forrthi that Orm itt wrohhte."

Paulus Orosius, a native of Tarragona in Spain, and a friend of Augustine, wrote his Seven Books of "Histories" about the year 417, while he was still a young man ('religiosus juvenis'), at the request of the Bishop of Hippo. They were to form a history of the world from the Deluge down to his own time (the last entry relates to the year 417), and the object of the book was to show that bloodshed, oppression, and misery had ever been the staple of human history, and that "Christian times" were unjustly blamed for the woes which the barbarians were then inflicting on the empire. . . . Vague, passionate, and declamatory, Orosius represents only the narrow prejudices of an orthodox provincial of the empire in his judgments concerning the men and the events of that mighty crisis.

Osiris (ō-sī′ris). [L. *Osiris,* Gr. *Ὄσιρις,* also *Ὕσιρις,* from Egyptian *Hesiri.*] In Egyptian mythology, one of the chief gods, the principle of good, the creator, the foe of evil, the god of the Nile, in constant conflict with his brother or son Set (the Greek Typhon), the god of evil, of darkness, of the desert. Osiris is vanquished and slain, but revives, and is avenged by Horus and Thoth — evidently a personification of the phenomena of the rising and setting sun. He was the guardian of mankind in the state after death, and as such the nocturnal sun, and a type of the sufferings and triumphs of humanity. In one form (the Osiris of Mendes) he personified the male principle. In art he was portrayed as a mummy wearing the crown of Upper Egypt, usually flanked by ostrich-plumes.

People do not yet agree as to the original character of Osiris. Maspero tried to discover the development of this god, and maintains that Osiris was originally and essentially a god of the dead, the first man, son of the heaven and earth, and as such the god of the dead. He also says that the original home of Osiris was not at Abydus, but in the Delta: at Busiris and Mendes. However this may be, Osiris was to the Egyptians above all things a god of the dead, more especially in a beneficial way as Onnoris. But he was identified, at an early date, with the sun: chapter seventeen of the Book of the Dead calls "Ra the soul of Osiris, and Osiris the soul of Ra."

Ostrogoths (os′trō-goths). The eastern branch of the Gothic race. While dwelling in southern Russia near the valley of the Don, they were attacked about A. D. 375 by the Huns, were subjugated, and with the Huns pushed the Visigoths to the borders of the Roman Empire. After the Visigothic victory at Adrianople in 378, many Ostrogoths settled in Pannonia. Many of them joined later the army of Attila, and after his death were employed by the Eastern emperors to defend the lower Danube. Theodoric became their king in 474, and in 489 led the nation over the Julian Alps, conquered Odoacer in 493 at Ravenna, and became king of Italy. Under his rule (see *Theodoric*) the country prospered. Belisarius tried to expel the Goths, and in 552 they were decisively defeated by the Byzantine general Narses. Italy was temporarily regained for the empire, and the Goths were absorbed by other peoples.

The real history of the Goths begins about the year 24 when they were living near the mouths of the Danube under the rule of Ostrogotha [Austraguta], the first king of the Amaling stock. Ostrogotha was celebrated in tradition for his "patience"; but in what way he displayed that virtue we are not informed, for history tells only of his victories. Whether on account of his patience or his deeds in war, his fame was widely spread; for one of the oldest Anglo-Saxon poems mentions him as "Eastgota, the father of Unwén." The name of this son is given by Jordanes as Hunuil, but probably the Anglo-Saxon form is the right one. *Bradley,* Story of the Goths, p. 2

Owen, Robert. Born at Newtown, Montgomeryshire, Wales, May 14, 1771: died there, Nov. 17, 1858. The founder of English socialism. Here he introduced extensive reforms looking to an improvement in the condition of his operatives. In 1825 he founded a socialistic community at New Harmony, Indiana, which failed in 1827. He severed his connection with the mills at New Lanark in 1828, and devoted himself to the propagation of socialism. The history of English socialism is commonly dated from 1817, in which year he communicated a report on the poor law to a committee of the House of Commons.

> He recommended that communities of about twelve hundred persons each should be settled on quantities of land of from 1,000 to 1,500 acres, all living in one large building in the form of a square, with public kitchen and messrooms. Each family should have its own private apartments, and the entire care of the children till the age of three, after which they should be brought up by the community, their parents having access to them at meals and all other proper times. These communities might be established by individuals, by parishes, by counties, or by the state; in every case there should be effective supervision by duly qualified persons. Work, and the enjoyment of its results, should be in common. The size of his community was no doubt partly suggested by his village of New Lanark; and he soon proceeded to advocate such a scheme as the best form for the reorganization of society in general. *Thomas Kirkup*, in Encyc. Brit., XVIII. 87.

Shortly after the Conquest a shepherd discovered the rich silver workings here [at Pachuca], and a mining camp at once sprang up that about 1534 was made a town. Here was invented in 1557, by Bartolomé de Medina, the so-called "patio process" for the amalgamation of silver ore. Among the more famous of the ancient mines was the Trinidad, whence was extracted $40,000,000 in silver in ten years. The period of the revolt against Spain, and of the subsequent civil wars, reduced the fortunes of the city to a very low depth. It was seized and sacked by revolutionists, April 23, 1812, when $300,000 worth of silver was taken from the Caja, and the records of the city were destroyed. Until 1850 its fortunes continued to decline, and its population greatly diminished. In this year the Rosario Mine came into bonanza—at once reviving the city's dormant prosperity. *Janvier*, Mex. Padua, It. **Padova** (pä'dō-vä), F. **Padoue** (pä-dō'). The capital of the province of Padua, Italy, situated on the Bacchiglione in lat. 45° 24′ N., long. 11° 51′ E.: the Roman Patavium. Among the chief objects of interest are the churches of San Antonio, Eremitani, and Santa Giustina, cathedral, university, botanic garden, Scuolo del Santo, picture-gallery, Loggia del Consiglio, and Palazzo Municipio (noted for its great hall). The Baptistery of the Duomo, an early-Romanesque building, is chiefly remarkable for its beautiful early frescos of the school of Giotto. The Church of the Eremitani, now the University Chapel, a large church of 1260, restored, contains many interesting mediæval and Renaissance tombs, notably those of the Carraras. The Loggia del Consiglio, an interesting early-Renaissance building, begun 1493, has below an open vaulted hall with widely spaced columns, and above a finely decorated saloon with three monumental windows. The Palazzo della Ragione was begun in 1172 as a court of justice. The lower story consists of open vaults surrounded by arcades left open for trading-booths. Above is an arcaded gallery with a sculptured frieze. In the second story is the famous Salone, a hall 295 feet long, 88 wide, and 79 high, whose enormous arched roof is entirely without intermediate supports. Pæstum (pes'tum), originally **Posidonia** (pos-i-dō'ni-ä). [Gr. *Παίστον, Ποσειδωνία.*] In ancient geography, a city in Lucania, Magna Græcia, Italy, situated near the sea in lat. 40° 25′ N., long. 15° E. It was a Greek city, a colony of Sybaris, founded about 600 B. C., and brought under Roman domination after the failure of Pyrrhus's invasion in 273 B. C. Under Roman rule Pæstum dwindled, and it was finally destroyed by the Saracens in the 9th century. The site is now deserted. The Greek walls are still standing throughout their circuit of 2½ miles, with 8 towers and 4 gates more or less ruined: the plan is approximately trapezoidal. Within the walls the three archaic Doric temples form, from their remarkable state of preservation, the most impressive Greek architectural group existing, except the monuments of Athens. Besides these beautiful temples, little is visible except remains of a Roman amphitheater, theater, and temple, all very ruinous. The temples of Pæstum are not mentioned by ancient writers, and were unknown to modern scholars until described by Antonini in 1745. The temple of Neptune, so called, is one of the three best-preserved Greek Doric temples, retaining all its exterior columns and most of those of the interior, and majestic in its aspect. It is peripteral, hexastyle, with 14 columns on the flanks, on a stylobate of 3 steps, measuring 85 by 190 feet. The columns are 7½ feet in base diameter and 29 feet high. Entablature and pediments are practically intact. Both pronaos and opisthodomos have two columns in antis. The cella has two double ranges of 7 Doric columns, the lower tiers of which are still complete. The temple is built of the local travertine, which has assumed from age a rich yellow color. It dates from the 6th century B. C. The temple of Ceres, so called, is Greek Doric, peripteral, hexastyle, with 13 columns on the flanks, on a stylobate of 3 steps, measuring 47 by 107 feet. There was an interior portico before the pronaos, and no opisthodomos; the cella, however, had a rear chamber occupying about one third of its length, with a door in the back. Though many architectural details appear debased, the temple probably dates from the early 6th century B. C. The Basilica, so called, is a Greek Doric peripteral structure of 9 by 18 columns, measuring 80 by 178 feet, on a stylobate of 3 steps. There are 5 columns between antæ in the pronaos, and the cella is divided longitudinally by a central range of columns. A reasonable explanation of this unusual plan is that the temple was double, one half being dedicated presumably to Demeter and the other to Persephone. Despite some poor architectural details which have been thought to indicate a late date, the temple probably belongs to the first part of the 6th century B. C.

The second volume was published in 1567, containing 34 novels; a third volume, although announced, did not appear. In later editions 6 more novels were added, so that there were 100 novels in all. Palais de Justice (dė zhüs-tēs′). [F., 'palace of justice.'] A historically and artistically interesting congeries of buildings in Paris, situated on L'Île de la Cité, at an angle of the Quai de l'Horloge. It is composed in part of portions of the ancient royal palace (the Conciergerie, with its three cylindrical cone-roofed towers, and the vaulted Cuisines de St. Louis). Excavations in 1848 disclosed the foundations of the Roman prefectorium under the present Palais de Justice. It was the residence of Childebert and the earlier Merovingians. Count Eudes (king A. D. 888) reconstructed the old Palais de la Cité as a fortress against the Norman invaders. When the Louvre was built by Philip Augustus, the palais lost its importance as a fortress and again became a residence and the seat of royal courts of justice, a use to which the entire building was finally put. The greater part is comparatively modern, and all has been restored since the wanton destruction by the Commune. The Salle des Pas Perdus is a splendid vaulted hall, 240 by 90 feet, with a central range of columns. The Galerie de St. Louis is admirably frescoed by Merson, and many other halls are notable for their decoration. Palamites (pal′a-mīts). The followers of Gregorius Palamas, a monk of Mount Athos in the 14th century. Simeon, abbot of a monastery at Constantinople in the 11th century, taught that by fasting, prayer, and contemplation, with concentration of thought on the navel, the heart and spirit would be seen within, luminous with a visible light. This light was believed to be uncreated, and the same which was seen at Christ's transfiguration, and is known accordingly as the "uncreated light of Mount Tabor." The doctrine was more carefully formulated and defended by Palamas, who taught that there exists a divine light, eternal and uncreated, which is not the substance or essence of deity, but God's activity or operation. The Palamites were favored by the emperor Joannes Cantacuzenus, and their doctrine was confirmed by a council at Constantinople in 1351. They were called by their opponents *Euchites* and *Massalians:* also *Hesychasts* and *Umbilicanimi.*

Palatinate (pa-lat′i-nāt), **The.** [F. *Palatinat,* G. *Pfalz,* ML. *Palatinatus,* the province of a count palatine, from *palatinus,* palatine.] A former German state. Its territories were originally in the region of the Rhine, and from the 14th century to 1620 embraced two separate regions, the Rhine (or Lower) Palatinate (distinctively the Palatinate), and the Upper Palatinate (see below). The palsgraves on the Rhine, whose original seat was at Aix-la-Chapelle, were important princes of the empire as early as the 11th century. Early in the 13th century the Palatinate passed to the Bavarian dynasty of Wittelsbach, which soon after branched off into the Bavarian and Palatine lines. The Palatinate was enlarged early in the 14th century with a part of Bavaria (the Upper Palatinate). The Golden Bull of 1356 designated the Palatinate as one of the seven electorates. In the 16th century Heidelberg, the capital of the electors palatine, became a great center of Calvinism. The elector Frederick V., having accepted the Bohemian crown in 1619 and having been overthrown in 1620, was stripped of his dominions. The electoral dignity was transferred to Bavaria in 1623, and the Upper Palatinate was annexed to it. By the treaty of 1648 the Rhine Palatinate was restored to its former rulers, and an eighth electorate created for it, the Upper Palatinate being confirmed to Bavaria. The Rhine Palatinate was terribly ravaged by the French in 1674 and 1689. The Palatinate and the Bavarian lands were united in 1777. In 1801 the Rhine Palatinate was divided: all west of the Rhine was ceded to France; Baden received Heidelberg, Mannheim, etc.; and the rest fell to Hesse-Darmstadt, Nassau, etc. By the treaties of 1814–15 the French portion west of the Rhine was restored to Germany: Prussia and Hesse-Darmstadt received portions, but the greater portion fell to Bavaria. This part is the present Rhine Palatinate, or Lower Palatinate (G. *Rheinpfalz* or *Unterpfalz*): it is bounded by the Rhine on the east, and borders on Hesse, Prussia, and Alsace-Lorraine. It forms a "Regierungs-bezirk" of Bavaria, with Spires as capital. It is traversed by the Hardt Mountains, and produces grain, wine, coal, etc. Area, 2,289 square miles. Population (1890), 728,339. The Upper Palatinate (G. *Oberpfalz*) forms a "Regierungs-bezirk" of Bavaria, under the title Upper Palatinate and Ratisbon (Regensburg). It borders on Bohemia. Capital, Ratisbon. It has extensive forests and flourishing industries. Area, 3,729 square miles. Population (1890), 537,954.

For 16 years he labored in extreme destitution before he succeeded in making the ware in high relief and rustic figulines associated with his name. He embraced the reformed religion, and was one of the principal founders of the Calvinistic church at Saintes. In 1562 his atelier was raided and devastated as a place of politico-religious meetings. Panama Canal. A projected ship-canal across the Isthmus of Panama. The idea of piercing the isthmus is very old, and from 1828 many surveys were made with reference to it, including very complete ones by the United States government 1872–75. In 1877 the Colombian government granted a concession to a Frenchman named Wyse for constructing the canal. Ferdinand de Lesseps supported the scheme. At his invitation an "international scientific congress" met at Paris in May, 1879, and after a short session, and without considering other plans, decided in favor of the Panama route: the American delegates refrained from voting. A Panama canal company was at once formed; the Wyse concession was purchased by it; De Lesseps himself, as chief engineer, visited the isthmus and declared that the canal was entirely practicable; and an "international technical committee" estimated the cost at $169,000,000. On the strength of these representations the shares were rapidly taken, and active work was commenced in 1881. The route decided upon is close to the Panama Railroad, crossing the Chagres River six times, and involving a long and deep cut through the Central Cordillera: the periodical floods of the Chagres were to be controlled by dams. Work was continued, with some interruptions, until March, 1889, when the company went into liquidation. Up to that time it is said to have absorbed $260,000,000, obtained by the sale of shares and bonds, mainly to the middle classes in France, and finally by lottery drawings which were authorized by the French government. Of the total length of the canal (54 miles), 12 miles had been so far finished as to be navigable: but this did not include the more difficult portions. In Dec., 1892, De Lesseps and his son, the contractor Eiffel, and others were arrested on charges of fraud in connection with the canal. See *Lesseps, Ferdinand de.* After the establishment of the Republic of Panama (1903) a treaty between it and the United States was negotiated (Feb. 26, 1904), by which the latter undertook to build the canal, the rights of the French company having been acquired by purchase.

From a now lost earlier Indian original of the Panchatantra came a lost Pahlavi translation about 550 A. D.; from that the Syriac "Kalilag and Damnag" (570) and the Arabic "Kalilah and Dimnah" (750); from the Arabic, the unknown intermediary of Baldo's "Alter Æsopus" of the 12th century, the Latin intermediary of Don Alfonso's Spanish version of 1299, the Hebrew of Rabbi Joel of 1250, the Persian of Nasr Allah 1130, and the Greek of Symeon Seth 1080; from Rabbi Joel's Hebrew version, John of Capua's "Directorium humanæ vitæ" 1270, a Spanish version ("Exemplario") in 1493, an Italian by Doni in 1552, and from that again the English of Sir Thomas North of 1570, while from Rabbi Joel's Hebrew through John of Capua's "Directorium" came also Duke Eberhard's "Buch der Beispiele" of 1480; from the Persian of Nasr Allah 1130 came Abul Fazl's revision for Akbar of 1590, and thence a Turkish rendered into French, and the "Anwari Suhaili," or "Lights of Canopus," translated into English by Eastwick 1854; from the Greek of Symeon Seth 1080 came a Latin version published in Rome 1666, and an Italian published at Ferrara 1583. This tabulation by Lanman of the results of Benfey, given by him in the introduction to his Panchatantra (Leipsic, 1859), and in Benfey's introduction to Bickell's "Kalilag und Damnag" (Leipsic, 1876), shows the importance of the work in the history of folk-lore. Panurge (pa-nėrj'; F. pron. pä-nürzh'). [Gr. *πανοῦργος*, a rogue, lit. 'all-doer.'] A character in Rabelais's "History of Gargantua and Pantagruel."

A very important personage in "Pantagruel" is Panurge, a singular companion whom Pantagruel picks up at Paris, and who is perhaps the greatest single creation of Rabelais. Some ideas may have been taken for him from the Cingar of Merlinus Coccaius, or Folengo, a Macaronic Italian poet, but on the whole he is original, and is hardly comparable to any one else in literature except Falstaff. The main idea in Panurge is the absence of morality in the wide Aristotelian sense, with the presence of almost all other good qualities. *Saintsbury,* French Lit., p. 185.

Considerable fragments of a social nature are quoted from it by Stobæus and Athenæus, which specially refer to the use and abuse of wine-drinking. They are elegantly written, and remind us strongly of the elegiac fragments on the same subject by Xenophanes and Theognis. He was also, according to Suidas, author of elegiac poems, in six books, called "Ionica," on the antiquities of Athens, and especially on the Ionic migration.

Papias (pā'pi-as). [Gr. *Παπίας.*] Lived about 130 A. D. An early Christian writer, bishop of Hierapolis in Phrygia. He was the author of a work (lost except in fragments) "Exposition of the Oracles of the Lord." See the extract.

What has given celebrity to the name of Papias is his authorship of a treatise in five books called "Expositions of Oracles of the Lord" (*Λογίων Κυριακῶν ἐξηγήσεις*) . . . which title we shall make further remark presently. The object of the book seems to have been to throw light on the Gospel history, and in particular to do so by the help of oral traditions which Papias had been able to collect from those who had come in contact with surviving members of the Apostolic circle. The fact that Papias lived at a time when it was still possible to meet such persons has given such importance to his testimony that though only some very few fragments of his work remain, they have given occasion to whole treatises: every word of these fragments being rigidly scrutinised, and, what is less reasonable in the case of a book of which so little is known, arguments being built on the silence of Papias about sundry matters which it is supposed he ought to have mentioned and assumed that he did not.

Papinian (pa-pin'i-an), L. **Æmilius Papinianus.** Executed by Caracalla, 212 A. D. A Roman jurist, pretorian prefect under Septimius Severus.

A friend of Severus and of almost the same age with him was the great jurist Æmilius Papinianus. Under Severus he was prætectus prætorio, but was executed soon after Caracalla's accession to the throne, on account of his loyalty to the other son, Geta. Papinian was remarkable not only for his juridical genius, for the independence of judgment, the lucidity and firmness, manifested in the judicial decisions on individual cases which he gave with the aid of his large experience, but also for his quick sense of right and morality, by which he frequently rose above the barriers of national prejudices, and merited the highest

veneration of succeeding centuries. The most important of his works are the 37 books of Quæstiones and the 19 books of Responsa, both of which have been much used in Justinian's collections. His diction is conspicuous for conciseness and exactness, but for that very reason is frequently difficult to follow.

Paraguay (par'a-gwi), Sp. and Pg. **Paraguaya** (pär-ä-gwī'ä). A river of South America, properly the upper portion of the Paraná. It rises in the table-land of western Brazil near lat. 14° 15′ S., flows south, and unites with the Upper Paraná to form the Lower Paraná in lat. 27° 17′ S., long. 58° 30′ W. It flows successively through Brazil, between Brazil and Bolivia, through northern Paraguay, separating the Paraguayan Chaco from the main portion, and finally between Paraguay and the Argentine Republic. In Brazil it is bordered by the vast swampy region called the Charaes marshes (see *Charaes*). The principal tributaries are the São Lourenço (receiving the Cuyabá) and Taquary on the east, and the Pilcomayo and Vermejo on the west. Length, about 1,500 miles (with the Lower Paraná and Plata, 2,580 miles); navigable to Villa Maria, 300 miles from its source.

Paraguay. An interior republic of South America, between the Paraná on the east and south and the Paraguay on the west, with a westward extension between the Paraguay and Pilcomayo: bounded north by Bolivia and Brazil, east by Brazil, and south and west by the Argentine Republic. Capital, Asuncion. The main portion is hilly or undulating, with a line of high hills, called mountains, in the interior; the part west of the Paraguay, included in the Gran Chaco region (which see), is flat, partly swampy, and has few inhabitants except wild Indians. The climate is semi-tropical. The principal products are hides, fruits, a little sugar, tobacco, and mate or Paraguay tea. Most of the inhabitants are a mixed race, descended from Spaniards and Guarany Indians; the common language is a corrupt form of Guarany, but Spanish is spoken in the larger places. The prevailing religion is Roman Catholic. Executive authority is vested in a president elected for four years, and congress consists of a senate and a chamber of deputies. The country has a very imperfect railroad and telegraph system. Paraguay was settled by Spaniards in 1536, and the colony at first included all the Platine region; the southern part was separated in 1620, and the country, as a province, approximately with its present limits, was attached to the viceroyalty of La Plata in 1776. Jesuit influence became predominant in the 17th century, and the order had here its most celebrated missions until it was expelled in 1767. The colony declared its independence in 1811, refusing to unite with the Argentine Confederation. It was successively under the absolute dictatorship of Francia (1814–40), C. A. Lopez (1841–62), and F. L. Lopez (1862–70). The last in 1865 provoked a war with Brazil, the Argentine, and Uruguay (see *Triple Alliance, War of the*), which terminated with his death after the country had been completely impoverished and a great part of the adult male population had been killed. The present constitution was adopted in 1870. The territory west of the Paraguay (Paraguayan Chaco) was claimed by the Argentine, but was awarded to Paraguay by the arbitration of President Hayes of the United States in 1878. Area, about 95,000 square miles. The very imperfect census of 1887 gave a civilized population of 329,645. In 1897 the white population was officially estimated at 600,000.

Paris (par'is). [Gr. Πάρις.] 1. In Greek legend, the second son of Priam, king of Troy, and Hecuba: also called Alexander. Before his birth Hecuba dreamt that she had given birth to a firebrand which caused a conflagration of the city. The dream was interpreted to mean that she would give birth to a son who would bring disaster on Troy. Paris was accordingly exposed on Mount Ida, but was for a time nourished by a she-bear, and was ultimately taken home and brought up by the shepherd who was intrusted with his exposure. His parentage was accidentally discovered; he was admitted to the household of Priam, married Œnone, daughter of the river-god Cebren, and became celebrated far and wide for his beauty of person, his gallantry, and his accomplishments. During the nuptials of Peleus and Thetis, Eris, who alone among the gods was excluded, threw a golden apple among the marriage guests with the inscription "To the Fairest." A dispute arose between Hera, Aphrodite, and Athene over the apple, and Zeus ordered Hermes to take the goddesses to Paris, who tended his flocks on Mount Gargarus, a height on Mount Ida, and who was to adjudge the apple. To influence his decision Hera offered him power, Athene martial glory, and Aphrodite the most beautiful of women. He awarded the apple to Aphrodite, who in return assisted him in carrying off from Sparta Helen, the wife of Menelaus. The rape of Helen gave rise to the Trojan war, during which he brought down upon himself the detestation of his own friends by his cowardice and his stubborn determination not to give up Helen. He was fatally wounded by Philoctetes with a poisoned arrow at the taking of Troy.

Parthenon (pär'the-non). [Gr. Παρθενών, the temple of Athene Parthenos ('the Virgin').] The official temple of Pallas, at Athens, as protectress of the city and guardian of the Athenian hegemony, begun about 450 B. C. by Ictinus, under the political direction of Pericles and the artistic presidency of Phidias. The temple is a Doric peripteros of 8 by 17 columns, on a stylobate of 3 steps, measuring on the stylobate 101 by 228 feet. Before both pronaos and opisthodomos there is an inner range of 6 columns. The cella had two interior double-tiered ranges of Doric columns, and behind it there was a large chamber used for a treasury, with 4 great columns to support its ceiling. The cult-statue in the cella was the famous colossal chryselephantine statue of Athene Parthenos by Phidias. It represented the goddess standing, wearing helmet and ægis, with her left hand supporting her spear, and on her extended right holding a Victory. At her feet were her shield and serpent. The entire upper part of the exterior wall of the cella was surrounded by a frieze in low relief, 3½ feet high, representing an idealized Panathenaic procession, in presence of the Olympian gods. Both pediments were filled with sculpture in the round, the group on the east representing the birth of Athene, that on the west her contest for Athens with Poseidon. The surviving fragments from the pediments and much of the frieze are among the Elgin Marbles in the British Museum, and are considered the most precious existing sculptures. The metopes of the peristyle entablature bore contests of Greeks with centaurs, Amazons, and Trojans, in high relief. The ornament of the Parthenon also included a comprehensive scheme of decoration in color. In refinement of design and perfection of execution this structure has never been paralleled. Since 1835 it has not been disputed that the existing Parthenon stands on the foundations of an older temple which, prior to the discovery in 1885 of the old temple of Athene (see *Athens*) adjoining the Erechtheum, was believed to be identical with this temple. In 1892 Mr. F. C. Penrose sought to establish, nevertheless, the truth of the old theory, basing his argument primarily on a series of architect's laying-out marks inscribed on the southern foundation of the Parthenon. Mr. Penrose's temple, assigned to the beginning of the 6th century B. C., was Doric, peripteral, hexastyle, with 16 columns on the flanks, measuring on the highest step 69.8 by 193.1 feet, and thus leaving unoccupied as a peribolos a considerable part of its massive platform. Dr. Dörpfeld, however, has traversed successfully the English archæologist's theory, and has proved that the older Parthenon was begun after the Persian invasion; that it was never finished; that it was Doric, peripteral, hexastyle, with 19 columns on the flanks, on a stylobate probably of 2 steps; and that it measured on the edge of the upper step 100.04 by 249.24 feet.

Passage of Honor. See the extract.

The first [of these special chronicles], according to the date of its events, is the "Passo Honroso," or the Passage of Honor, and is a formal account of a passage at arms which was held against all comers in 1434, at the bridge of Orbigo, near the city of Leon, during thirty days, at a moment when the road was thronged with knights passing for a solemn festival to the neighboring shrine of Santiago. The challenger was Suero de Quiñones, a gentleman of rank, who claimed to be thus emancipated from the service of wearing for a noble lady's sake a chain of iron around his neck every Thursday. The arrangements for this extraordinary tournament were all made under the king's authority. Nine champions, *mantenedores,* we are told, stood with Quiñones; and at the end of thirty days it was found that sixty-eight knights had adventured themselves against his claim, that six hundred and twenty-seven encounters had taken place, and that sixty-six lances had been broken;—one knight, an Aragonese, having been killed, and many wounded, among whom were Quiñones and eight out of his nine fellow-champions. *Ticknor,* Span. Pausanias, who is generally known as "the cicerone and tourist," and whose work, "the gazetteer of Hellas," is our best repertory of information for the topography, local history, religious observances, architecture, and sculpture of the different states of Greece. Of the personal history of Pausanias we know nothing. It has been inferred, from his reference to Pelops as having dwelt "with us," that he was a native of Lydia; and there is evidence to show that he had lived long near Mount Sipylus. Passages in his work prove that he was a contemporary of Hadrian and the Antonines.

Their technical refinement and cleverness seem to have had a special attraction for the later Romans.

He made sledge excursions along Whale Sound, Inglefield Gulf, and Humboldt Glacier; traversed the inland ice from McCormick Bay to the northeast angle of Greenland (Independence Bay, lat. 81° 37′ N.); and proved the convergence of the eastern and western coasts of northern Greenland, and almost with positiveness the insularity of the mainland. He discovered new lands (Melville Land, Heilprin Land) lying beyond Greenland, and named many glaciers. In Sept., 1892, he returned. In July, 1893, he sailed again, in the Falcon, intending to survey the northeastern coast of Greenland, and if possible to push on toward the north pole. He was unsuccessful and returned in September, 1895. In 1898 he again returned to the attack upon the pole. He made his winter quarters at Etah, near Smith Sound, and established caches of supplies as far as Fort Conger. In the spring of 1900 he set out from Fort Conger, and traced the northern limit of the Greenland archipelago, reaching the highest latitude (83° 50′ N.) then attained on the western hemisphere. His intention was to renew the attempt to reach the pole each spring until it should succeed. But he returned in Sept., 1902, having reached lat. 84° 17′ N. His wife, Josephine Diebitsch Peary, author of "My Arctic Journal" (1893), accompanied the expeditions of 1891–92, 1893–94, and 1900–01 (relief expedition) as far as the winter quarters. Pedro I. (Dom **Antonio Pedro de Alcantara Bourbon**). Born at Lisbon, Oct. 12, 1798: died there, Sept. 24, 1834. First emperor of Brazil. He was the second son of Dom João, who became John VI. of Portugal in 1816; and, by the death of his elder brother, was heir apparent. In 1807 he was taken to Brazil with the royal family. His father assumed the crown there, and returned to Portugal April 26, 1821, leaving Dom Pedro as regent of Brazil. Early in 1822 the prince assumed the leadership of the party of opposition to Portugal, definitely pronounced for independence Sept. 7, and was proclaimed emperor Oct. 12 and crowned Dec. 1. The only serious resistance made by Portugal was in the northern provinces, and was soon overcome; in 1825 Portugal recognized the independence of Brazil. The popularity of the emperor, at first very great, was weakened by his reactionary policy in 1823, and especially by his forcible dissolution of the constituent assembly Nov. 12, 1823, and the banishment of the Andradas. On March 25, 1824, he accepted a constitution which had been prepared by a council of state, and which remained in force during the empire. In 1828 the Cisplatine Province, or Uruguay, became independent after three years of war with Brazil. The increasing opposition to the emperor's policy at length provoked popular tumults. Convinced that he could no longer rule, he abdicated in favor of his son, April 7, 1831, and soon after sailed for England. On the death of John VI. (1826) he had been proclaimed king of Portugal, but had resigned the crown in favor of his daughter, whom the usurpation of Dom Miguel had deprived of her rights. On his arrival in Europe Dom Pedro at once headed a movement in his daughter's favor, taking a personal part in the war in Portugal. He was finally successful, and his daughter was crowned, but he died two days after. He was twice married: in 1818 to the archduchess Maria Leopoldina of Austria, who died in Dec., 1826; and in 1829 to the princess Amelia of Leuchtenberg.

Pedro II. (Dom **Pedro de Alcantara**). Born at Rio de Janeiro, Dec. 2, 1825: died at Paris, Dec. 5, 1891. Son of Pedro I., and second emperor of Brazil. His father resigned in his favor April 7, 1831. During his minority Brazil was governed by regents; his majority was proclaimed July 23, 1840, and he was crowned July 18, 1841. He was married in 1843 to the princess Theresa Christina, sister of the King of the Sicilies. His male children died young, and his eldest daughter, Dona Izabel de Bragança, became his constitutional successor. The principal events of his reign were: Transient rebellions in Minas Geraes and São Paulo, 1842; rebellion in Rio Grande do Sul finally suppressed, Feb., 1845; rebellion in Pernambuco suppressed, 1849; alliance with Urquiza and war in Uruguay, May, 1851, leading to the victory of Monte-Caseros, Feb. 3, 1852, by which Rosas, dictator of Buenos Ayres, was overthrown; invasion of Uruguay and alliance with Flores, 1864; war with Paraguay, 1865–70 (see *Triple Alliance*); law passed for the gradual abolition of slavery, Sept., 1871; slavery finally abolished as the result of a remarkable popular movement, May 13, 1888. Dom Pedro visited Europe May, 1871,–March, 1872; visited the United States 1876, passing thence to Europe, Palestine, and Egypt, and returning in Sept., 1877; and visited Europe a third time 1886–89: in each case he traveled as a private gentleman, and during his absence the princess Izabel acted as regent. By a revolution which broke out Nov. 15, 1889 (the principal movers being army officers), he was forced to resign, and was immediately sent to Europe. The ex-empress died in Portugal, Dec. 28, 1889, and thereafter Dom Pedro resided generally in France. As a ruler he was noted for the protection which he accorded to science and literature, and he was greatly respected both at home and abroad.

It has considerable commerce, and is noted for its "Périgord pies" of truffles and partridges. The cathedral, one of the most remarkable of medieval monuments, dates from the 11th century. In plan and dimensions it almost exactly reproduces St. Mark's at Venice: the present view is that both were inspired by the Church of the Holy Apostles at Constantinople. The plan is a Greek cross, measuring about 184 feet each way, covered by 5 domes on pendentives, about 30 feet in diameter and 100 high. The construction is of plain masonry, with some Romanesque arcades, and entirely without the wonderful Byzantine decoration in sculpture and color. The exterior, however, as restored, is highly impressive. The chevet is a remodeled 14th-century chapel, and at the west end there is a narthex formed of part of an earlier church, with a very old and curious tower, 197 feet high. This is the parent of all French medieval domical churches. Other objects of interest are the museum, the old cathedral of St. Etienne, a ruined ancient amphitheater, and the Roman Tour de Vésone. Vesuna was the chief place of the Petrocorii, and later a flourishing Roman town. The place was taken by the English in 1356, and was occupied by the Huguenots from 1575 to 1581. Perne (pėrn), **Andrew.** Born at East Bilney, Norfolk, 1519: died 1589. An English ecclesiastic and scholar. He was a graduate and fellow of Queens' College, and master of Peterhouse, Cambridge. He is best known by his changes in religious belief: he was a Catholic under Henry VIII., a Protestant under Edward VI., a Catholic again under Mary, and finally a Protestant under Elizabeth. He was, notwithstanding, a man of fine character, and rendered important service to his generation.

These changes of opinion exposed him to no little ridicule. The wits of the University added a new verb to the Latin language, *pernare*, 'to change one's opinion.' It became proverbial to say of a cloak that had been turned, "It has been Perned." The letters A. P. A. Perrault (pā-rō′), **Charles.** Born at Paris, Jan. 12, 1628: died there, May 16, 1703. A French writer. According to his own testimony, he left the college at Beauvais in consequence of a misunderstanding with one of his professors, and spent three or four years in conscientious study, especially of the classics. Two odes in eulogy of Louis XIV. brought him into favor at court, so that no opposition was raised to his admission to the French Academy, Sept. 22, 1671. His poem "Le siècle de Louis le Grand," read before this body on Jan. 27, 1687, expressed incidentally some ideas that were disparaging to the old classics. Between Boileau and Perrault arose then the great literary quarrel concerning the respective merits of the ancients and the moderns, which lasted over a dozen years, and did much to bring Perrault's name into prominence. In the course of their diatribe, Perrault started in 1688 the publication of his "Parallèle des anciens et des modernes." He also wrote the two works upon which his literary fame rests, "Les hommes illustres qui ont paru en France pendant ce siècle" (1696–1701), and "Les contes de ma mère l'oye" (1697). These tales, reminiscent of our "Mother Goose," are also known simply as "Les contes de Perrault": they include 18 charming fairy tales such as "Cinderella," "Bluebeard," "Little Red Riding-Hood," "Puss in Boots," etc. These stories were probably known long before Perrault's day, but to him belongs the credit of giving them in their French form a simple and lasting expression. The remainder of Perrault's writings have not added materially to his literary reputation, and he himself died in relative obscurity.

He became a midshipman in 1799, served in the Tripolitan war, and defeated the British in the celebrated battle of Lake Erie (which see) Sept. 10, 1813. He announced his victory in a note to General Harrison in the words "We have met the enemy, and they are ours." His victory enabled General Harrison to invade Canada supported by Perry's squadron. Perry commanded the naval battalion in the battle of the Thames Oct. 5, 1813. These two victories restored Michigan to the United States and established the supremacy of the Americans on the northwestern frontier during the rest of the War of 1812. Perry received from Congress a vote of thanks, a medal, and the rank of captain. He subsequently assisted in the defense of Baltimore.

Persepolis (pėr-sep′ō-lis). In ancient geography, one of the capitals of the Persian empire, situated not far from the Kur, about 35 miles northeast of the modern Shiraz, about lat. 30° N. It became the capital under Darius I.; was captured and burned by Alexander the Great about 330 B. C.; and is still noted for the ruins of its palaces. Near it are the ruins of Istakhr, the later Sassanian city. The most remarkable monuments are grouped on a terrace of smoothed rock and masonry, approximately rectangular in plan, though with irregular projections, measuring 940 by 1,550 feet, and attaining in front the height of 43 feet, of fine polygonal masonry, while at the back it is dominated by the rock of the foot-hills behind. The chief buildings on the terrace were the Propylæa and the great hypostyle hall of Xerxes, the Hall of 100 Columns, attributed to Darius, and the residence palaces of Darius and his successors. The Propylæa in their present form consist of two end-passages between piers of masonry from the front pair of which a wall formerly extended on each side, while in the interval between the passages stood two pairs of great columns all of whose superstructure is now gone. To one side of the Propylæa, toward the southeast, lies a second terrace, 10 feet high, upon which stand the ruins of the hypostyle hall or throne-pavilion of Xerxes. This consisted of a central square of 36 huge columns, preceded and flanked on both sides at an interval by 3 hexastyle porticos, each of 12 columns of the same size as those of the main group. The indications are that this structure never possessed inclosing walls, but was open like the halls of some Indian palaces, and fitted upon occasions of ceremony with hangings. The massive entablatures and the coffered ceilings were of wood, the roof of beaten clay. Thirteen imposing fluted columns still stand almost entire; their height is nearly 64 feet, their intercolumniation 29½. This monument was one of the greatest ever built by man. To the left of the hall of Xerxes, in the middle of the terrace, was the throne-pavilion of Darius, the Hall of 100 Columns, a building 250 feet square, preceded on the north by an octastyle portico in antis of 16 columns. Unlike the pavilion of Xerxes, that of Darius was surrounded by a massive wall, and the roof was supported by 10 ranges, each of 10 columns, with an intercolumniation of over 20 feet. The door- and window-frames, antæ, and niches of stone, and the bases of most of the columns, remain in place, while the brick walls have disappeared utterly. The residence palaces occupied the southern part of the terrace, and appear to have been 5 in number. The most important are those of Darius and Xerxes, most of whose piers, massive door- and window-frames, and other members of stone are still erect, while the brick walls and the wooden superstructure have perished. These palaces are similar in plan: there was a large covered hall in the middle, upon the front and sides of which opened a number of rather small rooms, while the more spacious royal apartments were at the back. The cornices over the great doors have precisely the Egyptian elements and profile, but differ in their decoration. In the palace of Darius carved reliefs of men fighting animals occur, based on Assyrian originals; in that of Xerxes the sculptures represent subjects pertaining to royal luxury. Great figures of bulls, often set up before the portals, recall the Assyrian practice. The columns, somewhat slender in type, have sculptured bases of inverted bell-form, and capitals with the fore parts of bulls projecting widely on 2 sides, like those of the Portico of the Bulls at Delos, and often beneath an erect circlet of plume-like leaves above a convex band of pendent lanceolate leaves, the entire profile being strikingly similar to that of the newly classified Greek Æolic capital, in which spreading volutes replace the bulls. In the face of the cliff behind the terrace are the decorated façades of royal rock-tombs. The chief explorations are due to Flandin and Coste in 1840–41, and to Stolze and Andreas prior to 1882. In 1891 some excavations were made by Herbert Weld Blundell, and casts of the sculptures and inscriptions taken by a private ex sent out from England.

The executive power in the republic is vested in a president, the legislative in a congress composed of a senate and a house of representatives. The inhabitants are chiefly Peruvians (of Spanish descent) and Indians. The prevailing language is Spanish; the prevailing religion, Roman Catholic. Civilization was highly developed under the empire of the Incas (see *Incas* and *Inca Empire*) and their predecessors, the Piruas (which see). The country was conquered by the Spaniards under Pizarro in 1533–34. Independence was proclaimed in 1821; and the Spanish viceroy was finally defeated at the battle of Ayacucho Dec. 9, 1824. Peru, Viceroyalty of. The region governed by the viceroys of Peru, who resided at Lima. The conquest of Peru proper led to that of Chile, Charcas (Bolivia), and Quito (Ecuador); and Pizarro, with his successors the viceroys, controlled those countries through their audiences and presidents or captains-general. New Granada, Panama, and Paraguay (including all the Platine region) were later added to Peru; so that, in the 17th century and part of the 18th the viceroyalty practically embraced all of Spanish South America and the Isthmus; that is, the audience districts of Lima, Charcas, Buenos Ayres, Santiago (Chile), Quito, Bogotá, and Panama. The viceroy was appointed by the crown, and corresponded directly with the Council of the Indies; he received a salary of 30,000 ducats, or 10,000 more than the viceroy of Mexico; had military as well as civil jurisdiction; and was president of the audience of Lima. Gradually his authority in the outlying provinces was restricted. In 1718 New Granada was completely separated: Quito, which was at first attached to it, was restored to Peru in 1739. The formation of the viceroyalty of La Plata (1776) reduced Peru to Peru proper, Chile, and Quito, the viceroy at Lima controlling the last two in military and treasury matters only. This arrangement continued until the revolution.

The cathedral, a late-Pointed church chiefly of the 15th century, is exceedingly rich in tombs and other sculptured work, and contains several paintings of unusual excellence, especially a Descent from the Cross by Baroccio (1569), and a Madonna by Luca Signorelli. The hexagonal late-Pointed exterior pulpit, resting on brackets, is among the most beautiful of its date: it is of marble, arcaded, with mosaic ornament. The Cambio, or hall of the money-changers, built in 1457, is famous for the frescos, by Perugino, which cover its walls and vaults, and constitute the most important connected series of works by that master. Other objects of interest include the Palazzo Pubblico (picture-gallery), Fonte Maggiore, and churches of San Pietro and San Domenico. Perugia was one of the twelve cities of the Etruscan League; was reduced by Rome about 300 B. C.; was besieged by Octavian in 41 and taken in 40 B. C.; was besieged and taken by Totila in 549 A. D.; was ruled by the popes and by various despots; surrendered to Pope Julius II.; was taken by the Duke of Savoy in 1708; and was taken by the Austrians in 1849. Leading a somewhat wandering life, he was called to Rome by Sixtus IV. to assist in the decoration of the Sistine chapel, and is credited with nine frescos there. Perhaps his greatest work is the decoration of the Sala del Cambio at Perugia. *Stillman.*

He had already determined to devote himself to the education of the people, and had established in 1775, on his estate Neuhof, a poor-school which was intended to draw its support from popular subscription. He was obliged, however, to give this up in 1780. The first account of his method of instruction was published at this time in Iselin's "Ephemeriden" with the title "Abendstunden eines Einsiedlers" ("Evening Hours of a Hermit"). His principal literary work is the didactic novel "Lienhardt und Gertrud, ein Buch für das Volk" ("Lienhardt and Gertrude: a Book for the People"), which was written between 1781 and 1785. In 1798, with government support, he founded an educational institution for poor children at Stanz, which was, however, given up the year after. He now took charge of a school at Burgdorf, which was removed in 1804 to Münchenbuchsee, and the following year to Yverdon, where it continued to exist until 1825, when, notwithstanding the renown that his pedagogical system had acquired, the enterprise was finally abandoned. His collected works were published at Brandenburg, 1869–72, in 16 volumes. Petra (pē'trą). [Gr. Πέτρα, rock.] In ancient geography, a city in Arabia Petræa, situated in lat. 30° 19′ N., long. 35° 31′ E. The site was early occupied on account of its proximity to the commercial route between Arabia and Egypt. From the 2d century B. C. it was a stronghold of the Nabatæans. The site consists of a precipice-inclosed valley on the northeastern side of Mount Hor. The sandstone rocks are brilliantly colored in many different hues, and are fantastically worn by the action of water. Petra is famous for its rock-cut architectural remains, dating from after the establishment of Roman rule in 105 A. D. These remains have been looked upon by many as those of temples and palaces, but are merely the façades, many of them considerable in scale and elaborate in ornament, of rock-tombs. All lack purity in design, and most precision in execution: but some are picturesque and graceful, bringing to mind the architectural ornament of Pompeian wall-paintings; and they gain in effectiveness by their situation and by the marvelous coloring of the rock. The buildings of the town are very ruinous, except the rock-cut theater.

Petrarch (pē'trärk), It. **Petrarca** (pā-trär'kä), **Francesco.** Born at Arezzo, Italy, July 20, 1304: died at Arquà, near Padua, July 18 (19?), 1374. A celebrated Italian poet, one of the chief names in Italian literature. His father belonged to the party of the Bianchi, and was banished at the same time as Dante: Petrarch remembered seeing the latter in his childhood. The family went to Avignon in 1313, and when about fourteen years old Petrarch went to Montpellier to pursue his studies: he remained there until he was eighteen. In 1327 he first saw the Laura of his sonnets. There have been many theories as to her identity; that generally received is that she was the daughter of Audibert de Noves, who married Hugues de Sade in 1325, and became the mother of eleven children. This, however, has been disputed. Petrarch's homage was conventional, and personal relations are not supposed to have existed between the wife of De Sade and the poet. He received a canonry at Lombez, at the foot of the Pyrenees, in 1335; in 1337 he bought the little house at Vaucluse, near Avignon, to which he retired, and where he did most of his best work; and in 1340 he was called on the same day both to Rome and to Paris to be crowned as poet laureate. He received the laurel crown at Rome April 8, 1341. In 1347 he built a house at Parma, but resided partly at Vaucluse until 1353, when he settled in Milan. He was patronized by nobles and ecclesiastics, and employed on various diplomatic missions, principally by the Visconti, whom he represented at the court of King John of France, conducting the marriage of a young Visconti with the daughter of the king. In 1362 he removed to Padua, where he had held a canonry since 1347, and to Venice, in the same year, where he saw Boccaccio for the last time, having first met him in 1350 at Florence. He went to Arquà in 1370, where he died. His chief works are, in Italian, the "Rime" or "Canzoniere," comprising sonnets and odes in honor of Laura, and the allegorical "Trionfi" ("Triumphs"), his last work; in Latin, the treatises "De contemptu mundi," addressed to Saint Augustine, "De vita solitaria," "De viris illustribus" (biographies), "De vera sapientia," "De otio religiosorum," "Africa," an epic poem on Scipio Africanus, etc. His letters and orations are numerous, and he wrote a number of controversial and polemical treatises. The "Canzoniere" was edited by Marsand and by Leopardi. His life has been written by De Sade, Körting, Bartoli, etc.

He returned to Egypt in 1884, as explorer to the Egypt Exploration Fund. He went twice again in the same capacity, each time making important discoveries, exploring the sites of Defennneh, Naucratis, etc., and bringing back plans and illustrations, all of which, with his memoirs and reports on the subject, have been published by the committee. In 1887–89 he explored in the Fayum (not for the Exploration Fund), and later explored with valuable results both for the Egyptian and Palestine Exploration Funds. He has published "Stonehenge, etc." (1880), "Pyramids and Temples of Ghizeh" (1883), "Historical Scarabs," "Historical Data of the XI. To Nero's time belongs also the character-novel of Petronius Arbiter, no doubt the same Petronius whom Nero a. 66 compelled to kill himself. Originally a large work in at least 20 books, with accounts of various adventures supposed to have taken place during a journey, it now consists of a heap of fragments, the most considerable of which is the "cena Trimalchionis," being the description of a feast given by a rich and uneducated upstart. Though steeped in obscenity, this novel is not only highly important for the history of manners and language, especially the plebeian speech, but it is also a work of art in its way, full of spirit, fine insight into human nature, wit of a high order, and genial humour. In its form it is a satira Menippea, in which the metrical pieces interspersed contain chiefly parodies of certain fashions of taste. This applies especially to the larger carmina, "Troiæ halosis" and "Bellum civile."

His name is given to a celebrated dialogue of Plato, which purports to be the last conversation of Socrates, with an account of his death.

The Phædon, or last conversation and death of Socrates, is certainly the most famous of all Plato's writings, and owes this renown not only to the infinite importance of the subject — the immortality of the soul — but to the touching scenery and pathetic situation in which the discourse is laid. Socrates and his friends in the prison, the cheerfulness of the victim, the distress of the friends, the emotions even of the jailor — these pictures are only paralleled in literature by the one sacrifice which was greater and more enduring than that of the noblest and purest of teacher.

Phædrus (fē'drus). [Gr. *Φαῖδρος.*] An Athenian, a friend of Plato, from whom one of Plato's most famous dialogues was named.

There are few Platonic works more full of poetry. Socrates, by the shady banks of the Ilissus, and within sight of the theatre of Dionysus, soars into a mighty dithyramb on the nature and effects of that divine impulse which leads us to long for immortality and to seek after perfection. . . . There seems now to be a sort of general agreement, even among the Germans, that it was an early work.

Phenicia, or Phœnicia (fe-nish'ạ). [*L. Phœnice*, Gr. *Φοινίκη*, land of palms.] The strip of land extending from 33° to 36° N. lat. on the coast of southern Syria, between Mount Lebanon and the Mediterranean Sea. It was about 200 miles in length, and its width did not exceed 35 miles at the maximum; area, about 4,000 square miles. But the rivers (fed by the snows of Lebanon) which irrigated it, and the energy and enterprise of its inhabitants, made this narrow tract of land one of the most varied in its products, and gave it a place in history out of proportion to its size. The principal rivers were the Leontes (the modern Litany), north of Tyre and the Orontes (the modern Nahr el-Asy) in the north. The cedars of the mountains furnished building-material; the coast furnished sand for glass and the purple snail for dyeing: and the inland plains were covered with orchards, gardens, and corn-fields. Though the coast-line was not deeply indented, the skill of the inhabitants secured them harbors. The ancient inhabitants of Phenicia, the Phœnices of the classical writers (*Pœni* or *Puni* designating the Carthaginians), are now considered by many scholars to have been Semites of the Canaanite group, though in Gen. x. 15 Sidon (Zidon), from whom the oldest city in the country derived its name, is represented as a descendant of Ham. They called themselves Canaanites, and their country Canaan. According to classical writers they emigrated from the Erythrean Sea. This would favor the assumption that the Phenicians were identical with the *Punti* of the Egyptian monuments. The language of the Phenicians was closely akin to Hebrew. They worshiped as principal divinities Baal and Astarte, besides the seven planets under the name of Cabiri (which see). Phenicia never formed a single state under one head, but rather a confederacy of cities. In the earliest period (1600–1100 B. C.) Sidon stood at the head of Phenician cities; about 1100 Sidon lost the hegemony to Tyre; in 761 Aradus was founded in the northern extreme of the country; and from these three cities Tripolis (the modern Tarablus) was settled. South of Tripolis old Byblus was situated, while Berytus (the modern Beirut) in the north did not become prominent before the Roman period. To the territory of Tyre belonged Ake or Acca (the modern Acre), later called Ptolemais. Separated from the rest of Phenicia lay Joppa (the modern Jaffa), on the coast of Palestine, which the Maccabees united with Palestine. The constitution of these Phenician townships was aristocratic, headed by a king. The earliest king of Tyre mentioned in the Old Testament was Hiram, a contemporary and friend of David and Solomon. After Hiram six kings are supposed to have ruled until Ethbaal or Ithobal, the father of Jezebel, wife of Ahab. Under Ethbaal's grandson, Pygmalion, contentions about the throne led to the emigration of his sister Elissa (Dido in Vergil) and the foundation of Carthage, the mighty rival of Rome. In the middle of the 9th century B. C. Phenicia shared the fate of Syria at large. After the battle of Karkar (853 B. C.) it became tributary to Assyria. It made a struggle for independence under Shalmaneser IV., but was brought to submission by his successor, Sargon. In 609 Phenicia came for a short time into the hands of Necho II., king of Egypt. Tyre was besieged for 13 years (585–572) by Nebuchadnezzar. Cyrus brought Phenicia with the rest of the Babylonian possessions under Persian supremacy. But, owing to their skill in navigation, the Phenicians retained a sort of independence. In 351 Sidon was destroyed by Artaxerxes III. The same fate befell Tyre at the hands of Alexander the Great in 332. In 64 Phenicia was annexed by Pompey to the Syrian province of the Roman Empire. Less original and productive in the domain of thought and higher culture, the Phenicians excel the other members of the Semitic family in contributions to material civilization. They were the merchants and manufacturers of antiquity. They were the most skilful shipbuilders and boldest navigators. All along the Mediterranean, even beyond Gibraltar, they established colonies. They sent colonies to Cyprus, Crete, and England, and it is not improbable that they worked the tin-mines of Cornwall. They even ventured to circumnavigate Africa. The principal articles of their commerce were precious stones, metals, glassware, costly textiles, and especially purple robes. Their skill in architecture was exhibited in the temple of Solomon. Their alphabetic writing became the parent of all the alphabetic systems now in use. They also transmitted a knowledge of mathematics and of weights and measures to other nations. Of the Phenician literature only a few fragments in Greek translation (by Sanchuniathon) have come down to us. Among the numerous Phenician inscriptions the most important is that of the sarcophagus of the Sidonian king Eshmunazar (who reigned in the 4th century B. C.), found in 1855, and now in Paris.

Phenix, or Phœnix (fē'niks). [Gr. *Φοίνιξ*.] In ancient Oriental mythology, a wonderful bird of great beauty, which, after living 500 or 600 years in the Arabian wilderness, the only one of its kind, built for itself a funeral pile of spices and aromatic gums, lighted the pile with the fanning of its wings, and was burned upon it, but from its ashes revived in the freshness of youth. Hence the Phenix often serves as an emblem of immortality. Allusions to this myth are found in the hieroglyphic writings, and the fable survives in popular forms in Arabia, Persia, and India. By heralds the Phenix is always represented in the midst of flames.

Pheræ (fē'rē). [Gr. *Φέραι*.] In ancient geography, a city in Thessaly, Greece, 25 miles southeast of Larissa. It was important in the first half of the 4th century B. C., under the tyrant Jason and his family.

Phidias (fid'i-ạs). [Gr. *Φειδίας*.] Born, probably at Athens, about 500 B. C.: died about 430 B. C. A celebrated Greek sculptor, the son of Charmides. He studied with Hegias of Athens, and later with Ageladas of Argos, who may have come to Athens in the time of Cimon. He became later, under Pericles, a counselor in political affairs at Athens, as well as chief sculptor, and was a sort of supervisor of public works. Among his first works were the temple of Theseus, not definitely identified with the existing building, and a group of thirteen figures at Delphi, ordered by Cimon, son of Miltiades, to commemorate the victory at Marathon, in which Miltiades was represented among gods and heroes. To this early period are ascribed also the Athene at Pellene, the Athene Areia at Platæa, and the Athene Promachos, or bronze colossus, on the Acropolis. This figure was probably more than 30 feet high, and could be seen for a great distance. The pedestal was discovered in 1845. The statue of Olympian Zeus at Elis, his greatest work, described by Pausanias, is supposed to have been about 42 feet high, seated and holding a Nike (Victory) in his hand. The flesh was of ivory and the drapery of gold, with inlaid or inscribed decoration. The throne itself, which rose above the head of the statue, was elaborately carved and decorated to the very top. Both throne and statue were surrounded with statues and paintings. By 444 B. C. Phidias must have been in Athens, and intimately associated with Pericles in his transformation of the city. All the great monuments of Athens, including the Parthenon, were erected at this time, within a period not longer than 20 years. The work of Phidias culminated in the Athene Parthenos, a chryselephantine (gold and ivory) statue of Athene in the cella of the Parthenon. It was finished and consecrated in 438. The figure was about 38 feet high, standing, and held a Nike in her right hand. The Varvakeion Athene in Athens (discovered in 1881) represents the statue, but inadequately. The enormous expense of these works, which was paid with money exacted from the allies of Athens, brought both Pericles and Phidias into disrepute. According to Plutarch, Phidias was accused of appropriating the gold devoted to the statue to his own use. The gold was removed, weighed, and found to be intact. He was then accused of sacrilege in representing Pericles and himself on the shield of the goddess. On this accusation he was condemned, thrown into prison, and died there, possibly of poison. This story, however, is doubtful. The actual style of Phidias is best represented in the well-known fragments of the frieze of the Parthenon, which easily hold the supreme place among all existing works of sculpture. Among the independent statues of Phidias was an Amazon at Ephesus which took the second prize in competition with Polycletus. This is supposed to be represented by the Amazon Mattei of the Vatican.

It was formerly the chief literary center of the country, and previous to 1830 the first city in population. It is the seat of the American Philosophical Society, Pennsylvania Historical Society, and Academy of Natural Sciences. It was laid out in 1682 under a patent granted to William Penn; was the residence of Benjamin Franklin; was the meeting-place of the Continental Congress in 1774 and generally afterward (the Declaration of Independence being adopted there July 4, 1776, and the Articles of Confederation in 1778); was the meeting-place of the Constitutional Convention in 1787; and was the capital of the country from 1790 to 1800, and the capital of Pennsylvania until 1799. It was ravaged by yellow fever in 1793. The first national bank was established here in 1791, and the second bank in 1816. There was an anti-Romanist riot in 1844. The territory of the city was greatly enlarged by the annexation of Germantown, Frankford, Manayunk, etc., in 1854. The Centennial Exposition of 1876 was held in the city. In 1292 or 1293 he summoned Edward I. of England, as the holder of French fiefs, to his court to answer for depredations committed by Edward's subjects on the Norman coast. Edward sent his brother, the Earl of Lancaster, who surrendered Guienne to Philip as security for a satisfactory settlement. Philip thereupon declared Edward's fiefs forfeited on account of his non-appearance. War broke out in consequence in 1294; peace was restored in 1299, Guienne being restored to Edward. In 1296 he became involved in a quarrel with Pope Boniface VIII., as the growing expenditures occasioned by the centralization of the government led him to tax ecclesiastical property. The quarrel culminated in 1303 in the seizure of the Pope, who, although released by the Roman populace, died shortly after. Boniface's successor, Benedict XI., dying in 1304, Philip procured the election of a Frenchman, Clement V., who removed the papal residence to Avignon. Throughout his reign the chief objects of his policy were to restore the Roman Catholic religion in the Protestant countries of Europe, and to introduce a uniform and despotic form of government throughout his diversified dominions. In 1559 he concluded with France the favorable peace of Câteau-Cambrésis, which ended a war inherited from the previous reign. His political and religious oppression provoked in 1567 a revolt of the Netherlands, which resulted in the virtual independence of the seven northern provinces by the Union of Utrecht in 1579. His half-brother Don John of Austria gained the brilliant naval victory of Lepanto over the Turks, Oct. 7, 1571. In the volume of Spenser's poems published in 1596 is a collection of laments for Sidney, among which is a "Pastoral Æglogue upon the Death of Sir Philip Sidney, etc.," in which each shepherd begins his lament with the words "Philisides is dead." It has been attributed to Sir Edward Dyer.

Philistia (fi-lis'ti-ạ). In ancient geography, a country southwest of Palestine, lying along the Mediterranean. The five principal cities were Ascalon, Ashdod, Gaza, Gath, and Ekron.

Philistines (fi-lis'tinz). A nation of Semitic (?) origin, dwelling in Philistia. They were frequently at war with the Hebrews, and reached their highest power in the reigns of Saul and David.

Caphtor was the original home of the Philistines, as we learn from several passages of the Bible (Deut. ii. 23, Jer. xlvii. 4, Amos ix. 7). In Genesis the reference to them has been shifted from its original place: it should follow the name of the Caphtorim and not of the Casluhim. The Philistines, in fact, were the garrison established by the Egyptian kings on the southern border of Palestine. The five cities which they held commanded the coast road from Egypt to Syria (Exod. xiii. 17), and formed the starting-point of Egyptian conquest and domination in Asia. It was needful that they should be inhabited by a population which, though akin in race to that of Canaan, were yet subjects of the Egyptian Pharaoh and bound by ties of birth to the Pharaoh's land. They came indeed from Canaan, but nevertheless were not of Canaan. As long as Egypt was strong their devotion to her was unshaken; when she deserted them and retreated within the limits of her own territory they still preserved their individuality and refused to mix with the population that surrounded them.

Philo, or **Philo Judæus** (fi'lō jō-dē'us) ('the Jew'). [Gr. *Φίλων.*] Born, probably at Alexandria, about 20 B. C.: died after 40 A. D. A Hellenistic Jewish philosopher of Alexandria. He went to Rome about 40 A. D., at the head of an embassy of five Jews, to plead with Caligula for the uninterrupted exercise of their religion.

The object of Philo . . . is to harmonize the philosophy of religion, which he had derived from a study of Plato, Aristotle, and other eminent heathen writers, with the letter of the books attributed to Moses. And he effects this reconciliation by an unlimited licence of allegory. This mode of dealing with ancient writers is justified not only by the practice of the Pharisees in Palestine, as we infer from the example of St. Paul, but also by the licence of the Greeks in dealing with their own mythology in general, and with Homer in particular.

Philo Byblius (bib'li-us) ('of Byblus'). Lived about 100 A. D. A grammarian from Byblus in Phenicia. See the extract.

Philo, a native of Byblos, at the foot of Mount Lebanon, obtained a considerable reputation as a learned grammarian at the end of the first and at the beginning of the second century of our æra. He was born, it seems, in the reign of Nero, and lived long enough to write about Hadrian. It is probable that he was established at Rome, as a client of Herennius Severus, who obtained the consulship, probably as *consul suffectus*, about the year 124 A. D.; for Philo bore the name of Herennius, and is apparently confused with this noble Roman by Suidas or one of his authorities. Besides works on history, rhetoric, and local celebrities, he engaged in labours not unlike those of Manetho and Berosus, and made known to the literary world in general the contents of the historical books of his own nation. Eusebius, in the epochal work in which he endeavours to show that all the heathen nations borrowed their traditional learning from the Jews, gives an account of the ancient mythology of the Phœnicians, on the authority of a translation in nine books by Philo of Byblos from the Phœnician history of Sanchoniathon of Berytus, who was placed in the time of Semiramis and before the Trojan war.
